

Lincoln Variable Insurance Products Trust

LVIP JPMorgan U.S. Equity Fund

Standard and Service Class

1301 South Harrison Street
Fort Wayne, Indiana 46802

Prospectus May 1, 2024

LVIP JPMorgan U.S. Equity Fund (the “Fund”) is a series of the Lincoln Variable Insurance Products Trust (the “Trust”). Shares of the Fund are currently offered only to separate accounts that fund variable annuity and variable life insurance contracts (“variable accounts”) of The Lincoln National Life Insurance Company, its affiliates, and third-party insurance companies. You cannot purchase shares of the Fund directly. This prospectus discusses the information about the Fund that you should know before investing.

As with all mutual funds, the Securities and Exchange Commission (“SEC”) has not approved or disapproved these securities or determined if this prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

We have not authorized any dealer, salesperson, or any other person to give any information, or to make any representation, other than what this prospectus states.

LVIP JPMorgan U.S. Equity Fund

(Standard and Service Class)

Summary

Investment Objective

The investment objective of the LVIP JPMorgan U.S. Equity Fund (the “Fund”) is to seek to provide high total return from a portfolio of selected equity securities.

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. This table does not reflect any variable contract expenses. **You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the tables and examples below.** If variable contract expenses were included, the expenses shown would be higher.

Annual Fund Operating Expenses (Expenses that you pay each year as a percentage of the value of your investment)

	Standard Class	Service Class
Management Fee	0.55%	0.55%
Distribution and/or Service (12b-1) fees	None	0.25%
Other Expenses	0.14%	0.14%
Total Annual Fund Operating Expenses	0.69%	0.94%

Example

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The example illustrates the hypothetical expenses that you would incur over the time periods indicated if you invest \$10,000 in the Fund’s shares. The example also assumes that the Fund provides a return of 5% a year and that operating expenses remain the same. Your actual costs may be higher or lower than this example. This example does not reflect any variable contract expenses. If variable contract expenses were included, the expenses shown would be higher. The results apply whether or not you redeem your investment at the end of the given period.

	1 year	3 years	5 years	10 years
Standard Class	\$70	\$221	\$384	\$ 859
Service Class	\$96	\$300	\$520	\$1,155

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 65% of the average value of its portfolio.

Principal Investment Strategies

J. P. Morgan Investment Management, Inc. (the “Sub-Adviser”) serves as the Fund’s sub-adviser. The Sub-Adviser is responsible for the day-to-day management of the Fund’s assets.

Under normal circumstances, the Fund invests at least 80% of its Assets in equity securities of U.S. companies. “Assets” means net assets, plus the amount of borrowings for investment purposes. In implementing its strategy, the Fund primarily invests in common stocks of large- and mid-capitalization U.S. companies but it may also invest up to 20% of its Assets in common stocks of foreign companies, including depositary receipts. Depositary receipts are financial instruments representing a foreign company’s publicly traded securities. A depositary receipt trades on a stock exchange in a country different from the company’s local market.

The Fund focuses on those equity securities that it considers attractively valued and seeks to outperform the S&P 500 Index Benchmark through superior stock selection. By emphasizing attractively valued equity securities, the Fund seeks to produce returns that exceed those of the S&P 500 Index.

Derivatives, which are instruments that have a value based on another instrument, exchange rate or index, may be used as substitutes for securities in which the Fund can invest. To the extent the Fund uses derivative, the Fund will primarily use futures contracts to more effectively gain targeted equity exposure from its cash positions.

An issuer of a security will be deemed to be located in the United States if: (i) the principal trading market for the security is in the United States, (ii) the issuer is organized under the laws of the United States, or (iii) the issuer derives at least 50% of its revenues or profits from the United States or has at least 50% of its total assets situated in the United States.

Investment Process: In managing the Fund, the Sub-Adviser employs a three-step process that combines research, valuation and stock selection. The Sub-Adviser takes an in-depth look at company prospects, which is designed to provide insight into a company’s real growth potential. The research findings allow the Sub-Adviser to rank the companies in each sector group according to their relative value. As part of its investment process, the Sub-Adviser seeks to assess the impact of environmental, social and governance (“ESG”) factors on many issuers in the universe in which the Fund invests. The Sub-Adviser’s assessment is based on an analysis of key opportunities and risks across industries to seek to identify financially material issues with respect to the Fund’s investments in securities and ascertain key issues that merit engagement with issuers. These assessments may not be conclusive and securities of issuers that may be negatively impacted by such factors may be purchased and retained by the Fund while the Fund may divest or not invest in securities of issuers that may be positively impacted by such factors.

On behalf of the Fund, the Sub-Adviser then buys and sells equity securities, using the research and valuation rankings as a basis. In general, the Sub-Adviser buys equity securities that are identified as attractively valued and considers selling them when they appear to be overvalued. Along with attractive valuation, the Sub-Adviser often considers a number of other criteria:

- catalysts that could trigger a rise in a stock’s price
- high potential reward compared to potential risk
- temporary mispricings caused by apparent market overreactions.

The Fund’s investment objective is not fundamental. This means that the Fund’s Board of Trustees (Board) may change the Fund’s objective without obtaining shareholder approval. If the objective was changed, the Fund would notify shareholders at least 60 days before the change became effective.

The Fund’s 80% policy is not fundamental and may be changed without shareholder approval. Fund shareholders would be given at least 60 days’ notice prior to any such change.

Principal Risks

All mutual funds carry risk. Accordingly, loss of money is a risk of investing in the Fund. The following risks reflect the principal risks of the Fund.

- **Market Risk.** The value of portfolio investments may decline. As a result, your investment in the Fund may decline in value and you could lose money.
- **Active Management Risk.** The portfolio investments are actively-managed, rather than tracking an index or rigidly following certain rules, which may negatively affect investment performance. Consequently, there is the risk that the methods and analyses, including models, tools and data, employed in this process may be flawed or incorrect and may not produce desired results.
- **Medium-Cap Company Risk.** Securities issued by medium-sized companies may be subject to more abrupt market movements and may involve greater risks than investments in larger companies. These less developed, lesser-known companies may experience greater risks than those normally associated with larger companies. This is due to, among other things, the greater business risks of smaller size and limited product lines, markets, distribution channels, and financial and managerial resources.
- **Large-Cap Company Risk.** The Fund may invest a relatively large percentage of its assets in the securities of large capitalization companies. While securities in this capitalization range may represent a significant percentage of a market, the Fund’s performance may be adversely affected if securities of large capitalization companies underperform that sector or the market as a whole.
- **Value Stocks Risk.** Value stocks tend to be inexpensive relative to their earnings or assets compared to other types of stocks, such as growth stocks. Value stocks can continue to be inexpensive for long periods of time, may not ever realize their potential value, and may even go down in price.

- **Foreign Investments Risk.** Foreign investments have additional risks that are not present when investing in U.S. investments. Foreign currency fluctuations or economic or financial instability could cause the value of foreign investments to fluctuate. The value of foreign investments may be reduced by foreign taxes, such as foreign taxes on interest and dividends. Additionally, foreign investments include the risk of loss from foreign government or political actions including, for example, the imposition of exchange controls, the imposition of tariffs, economic and trade sanctions or embargoes, confiscations, and other government restrictions, or from problems in registration, settlement or custody. Investing in foreign investments may involve risks resulting from the reduced availability of public information concerning issuers. Foreign investments may be less liquid and their prices more volatile than comparable investments in U.S. issuers. In addition, certain foreign countries may be subject to terrorism, governmental collapse, regional conflicts and war, which could negatively impact investments in those countries.
- **Derivatives Risk.** Derivatives or other similar instruments (referred to collectively as “derivatives”), such as futures, forwards, options, swaps, structured securities and other similar instruments, are financial contracts whose value depends on, or is derived from, the value of an underlying asset, reference rate or index. Derivatives may involve costs and risks that are different from, or possibly greater than, the costs and risks associated with investing directly in securities and other traditional investments. Derivatives prices can be volatile, may correlate imperfectly with price of the applicable underlying asset, reference rate or index and may move in unexpected ways, especially in unusual market conditions, such as markets with high volatility or large market declines. Some derivatives are particularly sensitive to changes in interest rates. Other risks include liquidity risk, which refers to the potential inability to terminate or sell derivative positions and for derivatives to create margin delivery or settlement payment obligations for the Fund. Further, losses could result if the counterparty to a transaction does not perform as promised. Derivatives that involve a small initial investment relative to the investment risk assumed can magnify or otherwise increase investment losses. This is referred to as financial “leverage” due to the potential for greater investment loss. Derivatives are also subject to operational and legal risks.
- **Concentration Risk.** Investments that are concentrated in particular industries, sectors or types of investments may be subject to greater risks of adverse developments in such areas of focus than investments that are spread among a wider variety of industries, sectors or investments.
- **Redemption Risk.** The Fund may need to sell securities at times it would not otherwise do so in order to meet shareholder redemption requests. The Fund could experience a loss when selling securities, particularly if the redemption requests are unusually large or frequent, occur in times of overall market turmoil or declining pricing for the securities sold or when the securities the Fund wishes to sell are illiquid. Selling securities to meet such redemption requests also may increase transaction costs. To the extent that a third-party insurance company has a large position in the Fund, the Fund may experience relatively large redemptions if such insurance company reallocates its assets.
- **ESG Integration Risk.** The investment process for the Fund may incorporate a wide range of considerations, which may include certain environmental, social and governance (“ESG”) factors. While the integration of ESG factors into the investment process has the potential to identify financial risks and contribute to long-term performance, ESG factors may not be considered for every investment decision. There is no guarantee that the integration of ESG factors will result in better performance.
- **Liquidity Risk.** Liquidity risk is the risk that the Fund cannot meet requests to redeem Fund-issued shares without significantly diluting the remaining investors’ interest in the Fund. This may result when portfolio holdings may be difficult to value and may be difficult to sell, both at the time or price desired. Liquidity risk also may result from increased shareholder redemptions in the Fund. Actions by governments and regulators may have the effect of reducing market liquidity, market resiliency and money supply. Liquidity risk also refers to the risk that the Fund may be required to hold additional cash or sell other investments in order to obtain cash to close out derivatives or meet the liquidity demands that derivatives can create to make payments of margin, collateral, or settlement payments to counterparties. The Fund may have to sell a security at a disadvantageous time or price to meet such obligations. The Fund’s liquidity risk management program requires that the Fund invest no more than 15% of its net assets in illiquid investments.

Fund Performance

The Fund has adopted the historical performance of the JPMorgan Insurance Trust U.S. Equity Portfolio, a former series of JPMorgan Insurance Trust, (the “Predecessor Fund”) as the result of a reorganization in which the Fund acquired all of the assets, subject to the liabilities, of the Predecessor Fund on May 1, 2023. The Fund and the Predecessor Fund have substantially similar investment objectives and strategies. The Fund commenced offering Standard Class shares and Service Class shares on May 1, 2023. The returns presented for periods prior to May 1, 2023 reflect the performance of the Predecessor Fund, without adjustment to reflect the fees and expenses of the Fund.

The following bar chart and table provide some indication of the risks of choosing to invest in the Fund. The information shows how the Fund’s Standard Class investment results have varied from year to year for various periods compare with those of a broad measure of market performance. The bar chart shows historical performance of the Predecessor Fund’s Standard Class shares, but does not reflect the impact of variable contract expenses. If it did, returns would be lower than those shown. The Fund’s past performance is not necessarily an indication of how the Fund will perform in the future.

Annual Total Returns (%)

Highest Quarterly Return Q2 2020 22.94%
 Lowest Quarterly Return Q1 2020 (18.16%)

Average Annual Total Returns for periods ended 12/31/23

	1 year	5 years	10 years
LVIP JPMorgan U.S. Equity Fund – Standard Class	27.16%	17.15%	12.44%

Purchase and Sale of Fund Shares

Fund shares are available as underlying investment options for variable life insurance and variable annuity products issued by The Lincoln National Life Insurance Company (“Lincoln Life”), Lincoln Life & Annuity Company of New York (“LNY”), and unaffiliated insurance companies. These insurance companies are the record owners of the separate accounts holding the Fund’s shares. You do not buy, sell or exchange Fund shares directly – you choose investment options through your variable annuity contract or variable life insurance policy. The insurance companies then cause the separate accounts to purchase and redeem Fund shares according to the investment options you choose. Fund shares also may be available for investment by certain funds of the Lincoln Variable Insurance Products Trust.

Tax Information

In general, contract owners are taxed only on Fund amounts they withdraw from their variable accounts. Contract owners should consult their contract Prospectus for more information on the federal income tax consequences to them regarding their indirect investment in the Fund. Contract owners also may wish to consult with their own tax advisors as to the tax consequences of investments in variable contracts and the Fund, including application of state and local taxes.

Payments to Broker-Dealers and other Financial Intermediaries

Shares of the Fund are available only through the purchase of variable contracts issued by certain life insurance companies. Parties related to the Fund (such as the Fund's principal underwriter or investment adviser) may pay such insurance companies (or their related companies) for the sale of Fund shares and related services. These payments may create a conflict of interest and may influence the insurance company to include the Fund as an investment option in its variable contracts. Such insurance companies (or their related companies) may pay broker-dealers or other financial intermediaries (such as banks) for the sale and retention of variable contracts that offer Fund shares. These payments may create a conflict of interest by influencing the broker-dealers or other financial intermediaries to recommend variable contracts that offer Fund shares. The prospectus or other disclosure documents for the variable contracts may contain additional information about these payments, if any. Ask your salesperson or visit your financial intermediary's website for more information.

Additional Information about the Fund

Investment Objective and Principal Investment Strategies

The Fund's investment objective is to seek to provide high total return from a portfolio of selected equity securities. This objective is non-fundamental and may be changed without shareholder approval.

Under normal circumstances, the Fund invests at least 80% of its Assets in equity securities of U.S. companies. "Assets" means net assets, plus the amount of borrowings for investment purposes. In implementing its strategy, the Fund primarily invests in common stocks of large- and mid-capitalization U.S. companies but it may also invest up to 20% of its Assets in common stocks of foreign companies, including depositary receipts. Depositary receipts are financial instruments representing a foreign company's publicly traded securities. A depositary receipt trades on a stock exchange in a country different from the company's local market.

The Fund focuses on those equity securities that it considers attractively valued and seeks to outperform the benchmark through superior stock selection. By emphasizing attractively valued equity securities, the Fund seeks to produce returns that exceed those of the benchmark.

Derivatives, which are instruments that have a value based on another instrument, exchange rate or index, may be used as substitutes for securities in which the Fund can invest. To the extent the Fund uses derivative, the Fund will primarily use futures contracts to more effectively gain targeted equity exposure from its cash positions.

An issuer of a security will be deemed to be located in the United States if: (i) the principal trading market for the security is in the United States, (ii) the issuer is organized under the laws of the United States, or (iii) the issuer derives at least 50% of its revenues or profits from the United States or has at least 50% of its total assets situated in the United States.

Investment Process: In managing the Fund, the Sub-Adviser employs a three-step process that combines research, valuation and stock selection. The Sub-Adviser takes an in-depth look at company, which is designed to provide insight into a company's real growth potential. The research findings allow the Sub-Adviser to rank the companies in each sector group according to their relative value. The Sub-Adviser also integrates financially material ESG factors as part of the Fund's investment process (ESG Integration). ESG Integration is the systematic inclusion of ESG issues in investment analysis and investment decisions. As part of its investment process, the Sub-Adviser seeks to assess the impact of environmental, social and governance ("ESG") factors on many issuers in the universe in which the Fund invests. The Sub-Adviser's assessment is based on an analysis of key opportunities and risks across industries to seek to identify financially material issues with respect to the Fund's investments in securities and ascertain key issues that merit engagement with issuers. These assessments may not be conclusive and securities of issuers that may be negatively impacted by such factors may be purchased and retained by the Fund while the Fund may divest or not invest in securities of issuers that may be positively impacted by such factors. In particular, ESG Integration does not change a Fund's investment objective, exclude specific types of industries or companies or limit the Fund's investable universe. The Fund is not designed for investors who wish to screen out particular types of companies or investments or are looking for Funds that meet specific ESG goals.

On behalf of the Fund, the Sub-Adviser then buys and sells equity securities, using the research and valuation rankings as a basis. In general, the Sub-Adviser buys equity securities that are identified as attractively valued and considers selling them when they appear to be overvalued. Along with attractive valuation, the Sub-Adviser often considers a number of other criteria:

- catalysts that could trigger a rise in a stock's price
- high potential reward compared to potential risk
- temporary mispricings caused by apparent market overreactions.

The Fund will invest primarily in equity securities as described above. The Fund invests in common stock as a main strategy. Although currently not a main strategy, the Fund's investments in equity securities may also include:

- preferred stock
- convertible securities
- trust or partnership interests
- warrants and rights to buy common stock

The main investment strategies for the Fund may also include the following which may be equity securities:

- foreign securities, often in the form of depositary receipts
- derivatives, including futures

Although not main investment strategies, the Fund may also utilize the following which may be equity securities:

- other investment companies
- exchange traded funds (ETFs)
- affiliated money market funds

- securities lending, which is the loan of securities to borrowers in exchange for cash collateral which the Fund may reinvest. During the term of the loan, the Fund is entitled to receive amounts equivalent to distributions paid on the loaned securities as well as the return on the cash collateral investments. Upon termination of the loan, the Fund is required to return the cash collateral to the borrower plus an agreed upon rebate
- derivatives, including options and swaps

The Fund is also permitted to use derivatives such as futures, options, swaps and other instruments in order to hedge various investments, for risk management and/or to opportunistically enhance the Fund's returns. In connection with its main investment strategies, the Fund may use futures to more effectively gain targeted equity exposure from its cash position. Under certain market conditions, the Fund's use of derivatives for cash management or other investment management purposes could be significant.

ETFs, which are pooled investment vehicles whose ownership interests are purchased and sold on a securities exchange, may be passively or actively managed. Passively managed ETFs generally seek to track the performance of a particular market index, including broad-based market indexes, as well as indexes relating to particular sectors, markets, regions or industries. Actively managed ETFs do not seek to track the performance of a particular market index. The price movement of an index-based ETF may not track the underlying index and may result in a loss. In addition, ETFs may trade at a price above (premium) or below (discount) their net asset value, especially during periods of significant market volatility or stress, causing investors to pay significantly more or less than the value of the ETF's underlying portfolio.

Ordinarily, the Fund must limit its investments in a single nonaffiliated ETF to 3% of the nonaffiliated ETFs total assets, 5% of the Fund's total assets and in all non-affiliated ETFs to 10% of its total assets. ETFs that are not structured as investment companies as defined in the Investment Company Act of 1940, as amended (1940 Act) are not subject to these percentage limitations. The Securities and Exchange Commission (SEC) adopted an exemptive rule that allows any fund investing in such ETFs to disregard these 3%, 5% and 10% limitations, subject to certain conditions. ETFs that are not structured as investment companies as defined in the Investment Company Act of 1940 are not subject to these percentage limitations. The price movement of an index-based ETF may not track the underlying index and may result in a loss. In addition, ETFs may trade at a price above (premium) or below (discount) their net asset value, especially during periods of significant market volatility or stress, causing investors to pay significantly more or less than the value of the ETF's underlying portfolio.

The Fund may utilize these investment strategies to a greater or lesser degree. If a strategy is a main investment strategy for the Fund, it is summarized above.

An issuer of a security will be deemed to be located in the United States if: (i) the principal trading market for the security is in the United States, (ii) the issuer is organized under the laws of the United States, or (iii) the issuer derives at least 50% of its revenues or profits from the United States or has at least 50% of its total assets situated in the United States.

Please note that the Fund also may use strategies that are not described herein, but which are described in the Statement of Additional Information.

The Fund's Board of Trustees may change the Fund's investment strategies or policies in the interest of shareholders without a shareholder vote, unless those strategies or policies are designated as fundamental. The Fund may change its 80% policy of investing in equity securities of U.S. companies only upon 60 days' notice to shareholders.

Principal Risks

All mutual funds carry risk. Accordingly, loss of money is a risk of investing in the Fund. The following risks reflect the principal risks of the Fund.

Market Risk. The value of portfolio investments may decline. As a result, your investment in the Fund may decline in value and you could lose money. A decline in value could result from, among other things, a negative development of the issuer of the security, an industry, a sector of the economy, or the overall securities market. In addition, the occurrence of geopolitical conflicts, war or terrorist activities could have adverse impacts on markets in various and unpredictable ways. For instance, war, terrorism, social unrest, recessions, supply chain disruptions, market manipulation, government defaults, government shutdowns, political changes, diplomatic developments, or the imposition of sanctions and other similar measures, public health emergencies (such as the spread of infectious diseases, pandemics and epidemics) and natural/environmental disasters can all negatively impact the securities markets, which could cause the Fund to lose value.

Active Management Risk. The portfolio investments are actively-managed, rather than tracking an index or rigidly following certain rules, which may negatively affect investment performance. Consequently, there is the risk that the methods and analyses, including models, tools and data, employed in this process may be flawed or incorrect and may not produce desired results. This could cause the Fund to lose value or its investment results to lag relevant benchmarks or other funds with similar objectives.

Medium-Cap Company Risk. Securities issued by medium-sized companies may be subject to more abrupt market movements and may involve greater risks than investments in larger companies. These less developed, lesser-known companies may experience greater risks than those normally associated with larger companies. This is due to, among other things, the greater business risks of smaller size and limited product lines, markets, distribution channels, and financial and managerial resources. Historically, the price of

medium capitalization companies has fluctuated more than the larger capitalization stocks. The securities of companies with medium capitalizations may trade less frequently and in limited volume. These companies also may have less certain growth prospects and greater sensitivity to changing economic conditions.

Medium-sized company stocks may decline in price as large company stock prices rise, or rise in price as large company stock prices decline. Many factors may lead to this result, including current and anticipated global economic conditions or change in interest rates.

Large-Cap Company Risk. The Fund may invest a relatively large percentage of its assets in the securities of large capitalization companies. While securities in this capitalization range may represent a significant percentage of a market, the Fund's performance may be adversely affected if securities of large capitalization companies underperform that sector or the market as a whole.

Value Stocks Risk. Value stocks tend to be inexpensive relative to their earnings or assets compared to other types of stocks, such as growth stocks. Value stocks can continue to be inexpensive for long periods of time, may not ever realize their potential value, and may even go down in price. Value stocks can react differently to issuer, political, market and economic developments than the market as a whole or other types of stocks. At times when the value investing style is out of favor, funds that invest in value stocks may underperform other equity funds that employ different investment styles.

Foreign Investments Risk. Foreign investments have additional risks that are not present when investing in U.S. investments. Foreign currency fluctuations or economic or financial instability could cause the value of foreign investments to fluctuate. The value of foreign investments may be reduced by foreign taxes, such as foreign taxes on interest and dividends. Additionally, foreign investments include the risk of loss from foreign government or political actions including, for example, the imposition of exchange controls, the imposition of tariffs, economic and trade sanctions or embargoes, confiscations, and other government restrictions, or from problems in registration, settlement or custody. The governments of certain countries may prohibit or impose substantial restrictions on foreign investing in their capital markets or in certain sectors or industries. Foreign governments may also impose a heavy tax on a company, withhold a company's payment of interest or dividends, seize assets of a company, take over a company, limit currency convertibility, or repatriation, or bar withdrawal of assets from the country. Investing in foreign investments may involve risks resulting from the reduced availability of public information concerning issuers. Foreign issuers generally are not subject to uniform accounting, auditing, and financial reporting standards or to other regulatory practices and requirements comparable to those applicable to U.S. issuers. The volume of transactions in certain foreign markets remains considerably below that of the U.S. markets. Accordingly, foreign investments may be less liquid and their prices more volatile than comparable investments in U.S. issuers. Investing in local markets may require special procedures or local governmental approvals or other actions, any of which may involve additional costs. These factors also may affect the liquidity of a foreign investment. Foreign brokerage commissions and custodian fees also are generally higher than in the U.S. In addition, certain foreign countries may be subject to terrorism, governmental collapse, regional conflicts and war, which could negatively impact investments in those countries.

Derivatives Risk. Derivatives or other similar instruments (referred to collectively as "derivatives"), such as futures, forwards, options, swaps, structured securities and other instruments, are financial contracts whose value depends on, or is derived from, the value of an underlying asset, reference rate or index. Derivatives may involve costs and risks that are different from, or possibly greater than, the costs and risks associated with investing directly in securities and other traditional investments. Derivatives prices can be volatile, may correlate imperfectly with price of the applicable underlying asset, reference rate or index and may move in unexpected ways, especially in unusual market conditions, such as markets with high volatility or large market declines. Some derivatives are particularly sensitive to changes in interest rates. Further, losses could result if the counterparty to a transaction does not perform as promised. Derivatives that involve a small initial investment relative to the investment risk can magnify or otherwise increase investment losses. This is referred to as financial "leverage" due to the potential for greater investment loss. Derivatives are also subject to operational and legal risks.

The performance of a derivative generally largely depends on the performance of its underlying asset, reference rate or index. If using derivative instruments is unsuccessful, performance may be worse than if no derivatives were used. When used for hedging purposes, there is a risk, especially under extreme market conditions, that a derivative may provide no such hedging benefit. Additionally, there is no guarantee that a liquid market will exist for a derivative position or that a derivative position will be able to be terminated, particularly with respect to "over-the-counter" instruments (investments not traded on an exchange). If the Fund is unable to close out a position on an options or futures contract, for example, the Fund would remain subject to the risk of adverse price movements until the Fund is able to close out the position. Changes in the value of a derivative or other similar instrument may also create margin delivery or settlement payment obligations for the Fund. Furthermore, counterparties to over-the-counter derivative contracts present the same types of credit risk as issuers of fixed income securities, including bankruptcy or insolvency. Options and futures contracts are also subject to the creditworthiness of clearing organizations and exchanges, futures and security options also are subject to the credit risk of futures commission merchants and broker-dealers, respectively. Derivatives can also be difficult to value, especially in declining markets.

Swap agreements may include equity, interest rate, index, total return, commodity, currency and credit default swaps. Swap agreements typically are contracts with a brokerage firm or other institutional buyer in which the parties agree to exchange the returns (or differentials in rates of return) earned or realized on a particular set dollar or currency value of predetermined investments or instruments. Currently, some, but not all, swap transactions are subject to central clearing. Non-cleared swap agreements, including credit

default swaps, involve greater risks than cleared swaps, including illiquidity risk and counterparty risk. Certain non-cleared swaps are subject to margin requirements that mandate the posting and collection of minimum margin amounts, which is intended to reduce some of the risks associated with these instruments. Eventually many swaps will be centrally cleared and exchange-traded. Although central clearing is expected to decrease counterparty risk because it interposes the central clearinghouse as the counterparty in bilaterally negotiated contracts, central clearing will not make swap transactions risk-free.

The Commodity Futures Trading Commission (“CFTC”) and the various exchanges have established limits referred to as “speculative position limits” on the maximum net long or net short positions that any person may hold or control in a particular futures contract, option on futures contract, and in some cases, over-the-counter transaction that is economically equivalent to certain futures or options contracts on physical commodities. Trading limits are imposed on the number of contracts that any person may trade on a particular trading day. An exchange or the CFTC may order the liquidation of positions found to be in violation of these limits and may impose sanctions or restrictions.

Changes in regulation relating to the Fund’s use of derivatives and related instruments could potentially limit or impact the Fund’s ability to invest in derivatives, limit the Fund’s ability to employ certain strategies that use derivatives, and adversely affect the value or performance of derivatives and the Fund.

Concentration Risk. Investments that are concentrated in particular industries, sectors or types of investments may be subject to greater risks of adverse developments in such areas of focus than investments that are spread among a wider variety of industries, sectors or investments. Investments in a select group of securities can be subject to a greater risk of loss and may be more volatile than investments that are more diversified.

Redemption Risk. The Fund may need to sell securities at times it would not otherwise do so in order to meet shareholder redemption requests. The Fund could experience a loss when selling securities, particularly if the redemption requests are unusually large or frequent, occur in times of overall market turmoil or declining pricing for the securities sold or when the securities the Fund wishes to sell are illiquid. Selling securities to meet such redemption requests also may increase transaction costs. To the extent that a third-party insurance company has a large position in the Fund, the Fund may experience relatively large redemptions if such insurance company reallocates its assets. Although the Fund seeks to minimize the impact of such transactions where possible, its performance may be adversely affected.

ESG Integration Risk. The investment process for the Fund may incorporate a wide range of considerations, which may include certain environmental, social and governance (“ESG”) factors. The relevance and weightings of specific ESG factors can vary across individual portfolio holdings, asset classes, sectors and strategies. No one factor or consideration is determinative. While the integration of ESG factors into the investment process has the potential to identify financial risks and contribute to long-term performance, ESG factors may not be considered for every investment decision. There is no guarantee that the integration of ESG factors will result in better performance. Moreover, ESG information is in many instances qualitative and therefore subjective. There are significant differences in interpretations of what it means for a company to have positive or negative ESG characteristics. An assessment of ESG factors for the Fund may differ from the views of other investors and advisers. The approach to ESG integration may evolve and develop over time, both due to a refinement of investment decision-making processes to address ESG factors and risks, and because of legal and regulatory changes.

Liquidity Risk. Liquidity risk is the risk that the Fund cannot meet requests to redeem Fund-issued shares without significantly diluting the remaining investors’ interest in the Fund. This may result when portfolio holdings may be difficult to value and may be difficult to sell, both at the time or price desired. Liquidity risk may result from increased shareholder redemptions in the Fund. An increase in shareholder redemptions could require the Fund to sell securities at reduced prices, which would in turn reduce the value of the Fund. In addition, the market for a particular holding may become illiquid due to adverse market or economic conditions, completely apart from any specific conditions in the market for a particular security. Actions by governments and regulators may have the effect of reducing market liquidity, market resiliency and money supply, such as through higher interest rates, tighter financial regulations and proposals related to open-end fund liquidity that may prevent the Fund from participating in certain markets. Liquidity risk also refers to the risk that the Fund may be required to hold additional cash or sell other investments in order to obtain cash to close out derivatives or meet the liquidity demands that derivatives can create to make payments of margin, collateral, or settlement payments to counterparties. The Fund may have to sell a security at a disadvantageous time or price to meet such obligations. The Fund’s liquidity risk management program requires that the Fund invest no more than 15% of its net assets in illiquid investments.

Management and Organization

The Board of Trustees (the “Board”) of the Fund oversees the business and affairs of the Fund, and has the power to amend the Fund’s bylaws, to declare and pay dividends, and to generally oversee the Fund’s operations.

Manager of Managers Structure: The Fund has received an SEC exemptive order that permits it to operate under a “manager-of-managers” structure. This structure allows LFI (defined below as the Fund’s investment adviser), subject to approval of the Board – and without the approval of shareholders – to: (i) select a new sub-adviser or additional sub-advisers for the Fund; (ii) terminate an existing sub-adviser and/or replace a sub-adviser; (iii) enter into new sub-advisory agreements and/or modify the terms of any existing sub-advisory agreement; and (iv) allocate and reallocate the Fund’s assets among LFI and one or more sub-advisers. (The order

does not apply to the hiring of a sub-adviser that is an affiliate of LFI.) If a new sub-adviser is hired for the Fund, the Fund will provide its shareholders with information about the new sub-adviser within 90 days of hiring. LFI has the ultimate responsibility (subject to Board oversight) to oversee, monitor and evaluate a sub-adviser's performance and to recommend the hiring, termination and replacement of a sub-adviser.

Investment Adviser and Sub-Adviser: Lincoln Financial Investments Corporation ("LFI") is the Fund's investment adviser. LFI is a registered investment adviser and wholly-owned subsidiary of Lincoln Life. LFI's address is 150 N. Radnor-Chester Road, Radnor, PA 19087. LFI (or its predecessors) has served as an investment adviser to mutual funds for over 30 years. As of December 31, 2023, LFI had more than \$108.6 billion in assets under management.

Lincoln Life is an insurance company organized under Indiana law and is a wholly-owned subsidiary of Lincoln National Corporation ("LNC"). LNC is a publicly-held insurance holding company organized under Indiana law. Through its subsidiaries, LNC provides nationwide insurance and financial services.

The Fund has entered into an Investment Management Agreement with LFI. LFI may hire one or more sub-advisers who are responsible for the Fund's day-to-day investment management. A sub-adviser is paid by LFI from its management fee.

A description of LFI (including the effective advisory fee rate for the most recently completed fiscal year), the Fund's sub-adviser, and the portfolio managers are included below. The Fund's statement of additional information ("SAI") provides additional information about the portfolio managers' compensation, other accounts managed by the portfolio managers, and the portfolio managers' ownership of Fund shares.

Adviser	LFI (aggregate advisory fee is to LFI for the fiscal year ended December 31, 2023 was 0.55% of the Fund's average net assets).
Sub-Adviser	J.P. Morgan Investment Management Inc. ("JPMIM") is a wholly-owned subsidiary of JPMorgan Asset Management Holdings Inc., which is a wholly-owned subsidiary of JPMorgan Chase & Co., a bank holding company. JPMIM is located at 383 Madison Avenue, New York, NY 10179. As of December 31, 2023, JPMIM and its affiliates had \$2.94 trillion in assets under management.
JPMIM Portfolio Managers	<p>Scott Davis and Shilpee Raina are responsible for the day-to-day management of the Fund's assets.</p> <p>Scott Davis, Managing Director of JPMIM, has been an employee since 2006, and has been a portfolio manager since 2013. Previously, he was an analyst in the U.S. Equity Research Group.</p> <p>Shilpee Raina, CFA, Executive Director of JPMIM and CFA charterholder, is a portfolio manager on the Large-Cap Core Equity Strategy within the U.S. Equity Group. An employee since 2005, Ms. Raina was previously a research analyst on the JPMorgan Equity Income and U.S. Value Funds, concentrating on the consumer sectors.</p>

A discussion regarding the basis for the Board's approval of the Fund's investment advisory and sub-advisory contracts is available in the Fund's annual report to shareholders for the period ended December 31, 2023.

Pricing of Fund Shares

The Fund determines its net asset value per share ("NAV") as of close of regular trading on the New York Stock Exchange ("NYSE") (normally 4:00 p.m. New York time, each business day). The Fund's NAV is the value of a single Fund share. The Fund determines its NAV by adding the values of its portfolio securities and other assets, subtracting its liabilities, and dividing by the number of Fund shares outstanding.

An order for Fund shares received after the close of regular trading on the NYSE will be effected at the NAV determined on the next business day.

The Fund's portfolio securities may be traded in other markets on days when the NYSE is closed. Therefore, the Fund's NAV may fluctuate on days when you do not have access to the Fund to purchase or redeem shares.

The Fund typically values its assets based on "market price." Market price for equities is typically the security's last sale price on a national securities exchange or over-the-counter, and for debt securities is typically the mean between the bid and ask prices (or the price established by an independent pricing service). Certain short-term fixed income securities are valued based on "amortized cost."

In certain circumstances, the Fund's adviser, LFI, may value Fund portfolio securities at "fair value" in accordance with applicable fair value procedures. The fair value of portfolio securities may differ from quoted or published prices for the same securities. Fair value pricing involves subjective judgments, and a security's fair value price may be materially different than the value realized upon the sale of that security. LFI's role with respect to fair valuation may present certain conflicts of interest given the impact valuations can have on Fund performance.

The Fund anticipates using fair value pricing for securities primarily traded on U.S. exchanges only under very limited circumstances, such as the unexpected early closing of the exchange on which a security is traded or suspension of trading in the security. The Fund may use fair value pricing more frequently for securities primarily traded in non-U.S. markets, if applicable, because, among other things, most foreign markets close well before the Fund determines its NAV. The earlier close of these non-U.S. markets gives rise to the possibility that significant events, including broad market moves, may have occurred in the interim. If the Fund invests in foreign equity securities, it may frequently value many of those securities using fair value prices based on third-party vendor modeling tools to the extent available.

To the extent the Fund invests in one or more mutual funds, the Fund values underlying mutual fund shares at their respective NAVs. For more information regarding the determination of a mutual fund's NAV, including when the mutual fund will fair value its portfolio securities and the effects of using fair value pricing, see the mutual fund's prospectus and SAI.

Purchase and Sale of Fund Shares

Fund shares are available as underlying investment options for variable life insurance and variable annuity products issued by The Lincoln National Life Insurance Company ("Lincoln Life"), Lincoln Life & Annuity Company of New York ("LNY"), and unaffiliated insurance companies. These insurance companies are the record owners of the separate accounts holding the Fund's shares. You do not buy, sell or exchange Fund shares directly – you choose investment options through your variable annuity contract or variable life insurance policy. The insurance companies then cause the separate accounts to purchase and redeem Fund shares according to the investment options you choose. Fund shares also may be available for investment by certain funds of the Lincoln Variable Insurance Products Trust.

The Fund sells and redeems its shares, without charge, at their NAV next determined after the Fund or its agent receives a purchase or redemption request. The value of Fund shares redeemed may be more or less than original cost.

The Fund normally pays for shares redeemed within seven days after the Fund receives the redemption request. However, the Fund may suspend redemptions or postpone payments for any period when (a) the NYSE closes for other than weekends and holidays; (b) the SEC restricts trading on the NYSE; (c) the SEC determines that an emergency exists, so that the Fund's disposal of investment securities, or determination of NAV is not reasonably practicable; or (d) the SEC permits, by order, for the protection of Fund shareholders.

The Fund typically expects to pay redemption proceeds using holdings of cash in the Fund's portfolio, or using the proceeds from sales of portfolio securities. To a lesser extent, the Fund also may use borrowing arrangements to meet redemption requests. Borrowing is typically expected to be used only during stressed or abnormal market conditions, when an increased portion of the Fund's holdings may be comprised of less liquid investments, or during emergency or temporary circumstances.

Market Timing

Frequent, large, or short-term purchases, redemptions or transfers such as those associated with "market timing" transactions, may adversely affect the Fund and its investment returns. These transactions may dilute the value of Fund shares, interfere with the efficient management of the Fund's portfolio, and increase the Fund's brokerage and administrative costs. As a result, the Fund strongly discourages such trading activity. To protect the Fund and its shareholders from potentially harmful trading activity, the Board has approved certain market timing policies and procedures (the "Market Timing Procedures"). The Board may revise the Market Timing Procedures at any time and without prior notice.

Investors may seek to exploit delays between a change in the value of a Fund's portfolio holdings, and the time when that change is reflected in the NAV of the Fund's shares by purchasing or redeeming shares at NAVs that do not reflect appropriate fair value prices. This risk is more pronounced for funds investing in overseas markets, due to the time differential in pricing between U.S. and overseas markets, and thinly traded securities. The Fund seeks to deter and prevent this activity by the appropriate use of "fair value" pricing of the Fund's portfolio securities.

The Fund seeks to monitor shareholder account activities in order to detect and prevent excessive and disruptive trading practices. The Fund and LFI each reserve the right to reject, restrict, or refuse any purchase order (including exchanges) from any investor, if, in the judgment of the Fund or LFI, the transaction may adversely affect the Fund or its shareholders.

The Fund has entered into agreements with each insurance company that holds Fund shares to help detect and prevent market timing. Under the agreements, an insurance company may be required to (i) provide certain identifying and account information regarding contract owners who invest in Fund shares through the omnibus account; and (ii) restrict further purchases or exchanges of Fund shares by a contract owner whom the Fund has identified as a market timer.

The Fund also may rely on frequent trading policies established by such insurance companies. If the Fund detects potential market timing, the Fund will contact the applicable insurance company and may ask the insurance company to take additional action, if appropriate, based on the particular circumstances.

Fund investors seeking to engage in market timing may deploy a variety of strategies to avoid detection. In addition, Fund shares may be held through omnibus accounts, which generally do not identify trading activity of Fund investors on an individual basis. As a result of these and other operational or technological limitations, there is no guarantee that the Fund will be able to identify or prevent market timing. Moreover, the identification of Fund investors determined to engage in transactions that may adversely affect the Fund or its investors involves judgments that are inherently subjective.

Insurance company sponsors of your contract may impose transfer limitations and other limitations designed to curtail market timing. Please refer to the prospectus and SAI for your variable annuity or variable life contract for details.

Portfolio Holdings Disclosure

A description of the Fund's policies and procedures with respect to the Fund's disclosure of portfolio securities is available in the Fund's SAI.

Share Classes and Distribution Arrangements

The Fund offers two classes of shares: Standard Class and Service Class. The two classes are identical, except that Service Class shares are subject to a distribution (Rule 12b-1) fee which has been adopted pursuant to a distribution and service plan (the "Plan"). Under the Plan, Service Class shares pay annual amounts not exceeding 0.35% of the average daily net assets of the Service Class shares of the Fund. The Fund offers shares to insurance companies for allocation to certain of their variable contracts. The Fund pays its principal underwriter, Lincoln Financial Distributors, Inc. ("LFD"), out of the assets of the Service Class, for activities primarily intended to sell Service Class shares or variable contracts offering Service Class shares. LFD pays third parties for these sales activities pursuant to written agreements with such parties. The 12b-1 fee may be increased by the Fund's Board up to the maximum allowed by the Plan, without shareholder approval, in accordance with the Plan's terms. These fees are paid out of the Service Class assets on an ongoing basis, and over time will increase the cost of your investment and may cost you more than other types of sales charges.

LFI and its affiliates, including LFD, and/or the Fund's sub-advisers or underlying funds, if any, or their affiliates, may pay additional compensation (at their own expense and not as a Fund expense) to certain affiliated or unaffiliated brokers, dealers, or other financial intermediaries (collectively, "financial intermediaries") in connection with the sale or retention of Fund shares or insurance products that contain the Fund and/or shareholder servicing ("distribution assistance"). The level of payments made to a qualifying financial intermediary in any given year will vary. To the extent permitted by SEC and Financial Industry Regulatory Authority rules and other applicable laws and regulations, LFD may pay or allow its affiliates to pay other promotional incentives or payments to financial intermediaries.

If a mutual fund sponsor, distributor or other party makes greater payments to your financial intermediary for distribution assistance than sponsors or distributors of other mutual funds make to your financial intermediary, your financial intermediary and its salespersons may have a financial incentive to favor sales of shares of the mutual fund complex making the higher payments over another mutual fund complex or over other investment options. You should consult with your financial intermediary and review carefully the disclosure relating to the compensation your financial intermediary receives in connection with the investment products your financial intermediary recommends or sells to you. In certain instances, the payments could be significant and may cause a conflict of interest for your financial intermediary. Any such payments to a financial intermediary will not change the Fund's NAV, or the price of its shares, as such payments are not made from Fund assets.

For more information, please see the SAI.

Distribution Policy

The Fund intends to qualify as a regulated investment company under the Internal Revenue Code, which requires annual distributions of net investment income and net capital gains to shareholders – the insurance company variable accounts. The Fund may distribute net realized capital gains only once a year. Net investment income and capital gain distributions will be automatically reinvested in additional Fund shares of the same class at no charge, and are reflected in variable account values.

Contract owners ordinarily are not taxed on Fund distributions. In general, contract owners are taxed only on Fund amounts they withdraw from their variable accounts. See the "Tax Information" section.

Financial Highlights

The financial highlights tables are intended to help you understand the financial performance of the Fund's Standard and Service Class shares for the past five years. Certain information reflects financial results for a single Fund share. Total investment return is based on the change in net asset value of a share during the period and assumes reinvestment of dividends and distributions at net asset value. This table does not reflect any variable contract expenses. If variable contract expenses were included, the expenses shown would be higher. The information for the fiscal year ended 2022 was audited by PricewaterhouseCoopers LLP, (the "Predecessor Funds' Auditor"), whose report, along with the Fund's financial statements, is included in the annual report, which is available upon request by calling 800-480-4111. The information for the period ended April 30, 2023 was audited by the Predecessor Fund's Auditor. The information for the period including May 1, 2023, through December 31, 2023, was audited by Tait, Weller & Baker LLP, the Fund's Independent Registered Public Accounting Firm.

Net assets, end of period (000 omitted)	\$125,043	\$105,316	\$143,135	\$121,611	\$101,127
Ratio of expenses to average net assets ⁴	0.69%	0.77%	0.74%	0.76%	0.78%
Ratio of expenses to average net assets prior to expenses waived/reimbursed	0.69%	0.77%	0.74%	0.76%	0.79%
Ratio of net investment income to average net assets	0.93%	0.73%	0.48%	0.94%	0.88%
Ratio of net investment income to average net assets prior to expenses waived/reimbursed	0.93%	0.73%	0.48%	0.94%	0.87%
Portfolio turnover	65%	48%	48%	66%	69%

¹ The Fund adopted the accounting and performance history of the JPMorgan Insurance Trust U.S. Equity Portfolio, a former portfolio of JPMorgan Insurance Trust, as the result of a reorganization on May 1, 2023. Pre-inception information is that of the JPMorgan Insurance Trust U.S. Equity Portfolio.

² The average shares outstanding method has been applied for per share information.

³ Total return is based on the change in net asset value of a share during the period and assumes reinvestment of dividends and distributions at net asset value. Total return reflects waivers/reimbursements by the manager. Performance would have been lower had the waivers/reimbursements not been in effect. Total return does not include fees, charges, or expenses imposed by the variable annuity and life insurance contracts for which the Fund serves as an underlying investment vehicle. If total return had taken these into account, performance would have been lower.

⁴ Includes earnings credits and interest expense, if applicable, each of which is less than 0.005% unless otherwise noted.

General Information

The use of the Fund by both annuity and life insurance variable accounts is called mixed funding. Due to differences in redemption rates, tax treatment, or other considerations, the interests of contract owners under the variable life accounts may conflict with those of contract owners under the variable annuity accounts. Violation of the federal tax laws by one variable account investing in the Fund could cause the contracts funded through another variable account to lose their tax-deferred status, unless remedial action was taken. The Fund's Board will monitor for any material conflicts and determine what action, if any, the Fund or a variable account should take.

A conflict could arise that requires a variable account to redeem a substantial amount of assets from the Fund. The redemption could disrupt orderly portfolio management to the detriment of those contract owners still investing in the Fund. Also, the Fund could determine that it has become so large that its size materially impairs investment performance. The Fund would then examine its options, which could include imposition of redemption fees or temporarily closing the Fund to new investors.

You can find additional information in the Fund's SAI, which is on file with the SEC. The Fund incorporates its SAI, dated May 1, 2024, into its prospectus. The Fund will provide a free copy of its SAI upon request.

You can find detailed information about the Fund's investments in the Fund's annual and semi-annual reports to shareholders and in Form N-CSR. The annual report discusses the market conditions and investment strategies that significantly affected the Fund's performance during its last fiscal year. In Form N-CSR, you will find the Fund's annual and semi-annual financial statements. The Fund will provide a free copy of its annual and semi-annual report upon request.

The SAI, annual and semi-annual reports, and other information such as the Fund's financial statements are available, free of charge, upon request. For an SAI, annual or semi-annual report or financial statements, either write The Lincoln National Life Insurance Company, P.O. Box 2340, Fort Wayne, Indiana 46801, or call 1-800-4LINCORN (454-6265). You may also call this number to request other information about the Fund, or to make inquiries. The Fund's SAI and annual and semi-annual reports, and other information such as the Fund's financial statements are available, free of charge, at <https://www.lfg.com/LVIP>.

You can also get reports and other information about the Fund on the EDGAR Database on the SEC's Internet site at <https://www.sec.gov>. You can get copies of this information, after paying a duplicating fee, by electronic request at the following e-mail address: publicinfo@sec.gov.
