⁵Index-linked bond whose principal amount moves with a government price index.

⁶Principal payments may be made periodically. Therefore, the effective maturity date may be earlier than the stated maturity date.

⁷Acquired in a transaction exempt from registration under Rule 144A or, for commercial paper, Section 4(a)(2) of the Securities Act of 1933. May be resold in the U.S. in transactions exempt from registration, normally to qualified institutional buyers. The total value of all such securities was \$99,714,000, which represented 6.68% of the net assets of the fund.

⁹Coupon rate may change periodically. Reference rate and spread are as of the most recent information available. Some coupon rates are determined by the issuer or agent based on current market conditions; therefore, the reference rate and spread are not available.

¹⁰Payment in kind; the issuer has the option of paying additional securities in lieu of cash. Payment methods and rates are as of the most recent payment when available.

¹¹Amount less than one thousand.

¹⁸The prices and resulting values for credit default swap indices serve as an indicator of the current status of the payment/performance risk. As the value of a sell protection credit default swap increases or decreases, when compared to the notional amount of the swap, the payment/performance risk may decrease or increase, respectively.

Valuation disclosures

Capital Research and Management Company ("CRMC"), the series' investment adviser, values the funds' investments at fair value as defined by U.S. generally accepted accounting principles. The net asset value per share is calculated once daily as of the close of regular trading on the New York Stock Exchange, normally 4 p.m. New York time, each day the New York Stock Exchange is open. Security transactions are recorded by the fund as of the date the trades are executed with brokers. Assets and liabilities, including investment securities, denominated in currencies other than U.S. dollars are translated into U.S. dollars at the exchange rates supplied by one or more pricing vendors on the valuation date.

Methods and inputs – The series' investment adviser uses the following methods and inputs to establish the fair value of each fund's assets and liabilities. Use of particular methods and inputs may vary over time based on availability and relevance as market and economic conditions evolve.

Equity securities, including depositary receipts, are generally valued at the official closing price of, or the last reported sale price on, the exchange or market on which such securities are traded, as of the close of business on the day the securities are being valued or, lacking any sales, at the last available bid price. Prices for each security are taken from the principal exchange or market on which the security trades. The value of an underlying fund is based on its reported net asset value.

Fixed-income securities, including short-term securities, are generally valued at evaluated prices obtained from third-party pricing vendors. Vendors value such securities based on one or more of the inputs described in the following table. The table provides examples of inputs that are commonly relevant for valuing particular classes of fixed-income securities in which the funds are authorized to invest. However, these classifications are not exclusive and any of the inputs may be used to value any other class of fixed-income security.

Fixed-income class	Examples of standard inputs
All	Benchmark yields, transactions, bids, offers, quotations from dealers and trading systems, new issues, spreads and other relationships observed in the markets among comparable securities; and proprietary pricing models such as yield measures calculated using factors such as cash flows, financial or collateral performance and other reference data (collectively referred to as "standard inputs")
Corporate bonds, notes & loans; convertible securities	Standard inputs and underlying equity of the issuer
Bonds & notes of governments & government agencies	Standard inputs and interest rate volatilities
Mortgage-backed; asset-backed obligations	Standard inputs and cash flows, prepayment information, default rates, delinquency and loss assumptions, collateral characteristics, credit enhancements and specific deal information
Municipal securities	Standard inputs and, for certain distressed securities, cash flows or liquidation values using a net present value calculation based on inputs that include, but are not limited to, financial statements and debt contracts

Securities with both fixed-income and equity characteristics, or equity securities traded principally among fixed-income dealers, are generally valued in the manner described for either equity or fixed-income securities, depending on which method is deemed most appropriate by the series' investment adviser. The Capital Group Central Corporate Bond Fund ("CCBF"), a fund within the Capital Group Central Fund Series II, and Capital Group Central Cash Fund ("CCF"), a fund within the Capital Group Central Fund Series (collectively the "Central Funds"), are each valued based upon a floating net asset value, which fluctuates with changes in the value of each fund's portfolio securities. The underlying securities are valued based on the policies and procedures in the Central Funds' statements of additional information. The State Street Institutional U.S. Government Money Market Fund held by the managed risk funds is managed to maintain a \$1.00 net asset value per share. The net asset values of each share class of each managed risk fund are calculated based on the reported net asset values of the underlying funds in which each fund invests.

Exchange-traded options and futures are generally valued at the official closing price for options and the official settlement price for futures of the exchange or market on which such instruments are traded, as of the close of business on the day such instruments are being valued. Forward currency contracts are valued based on the spot and forward exchange rates obtained from a third-party pricing vendor. Swaps are generally valued using evaluated prices obtained from third-party pricing vendors who calculate these values based on market inputs that may include the yields of the indices referenced in the instrument and the relevant curve, dealer quotes, default probabilities and recovery rates, other reference data, and terms of the contract.

The following table presents the average month-end notional amounts of options contracts purchased, futures contracts, forward currency contracts, interest rate swaps and credit default swaps for each fund while held (dollars in thousands):

Securities and other assets for which representative market quotations are not readily available or are considered unreliable by the series' investment adviser are fair valued as determined in good faith under fair value guidelines adopted by the series' investment adviser and approved by the board of trustees as further described below. The investment adviser follows fair valuation guidelines, consistent with U.S. Securities and Exchange Commission rules and guidance, to consider relevant principles and factors when making fair value determinations. The investment adviser considers relevant indications of value that are reasonably and timely available to it in determining the fair value to be assigned to a particular security, such as the type and cost of the security, contractual or legal restrictions on resale of the security, relevant financial or business developments of the issuer, actively traded similar or related securities, dealer or broker quotes, conversion or exchange rights on the security, related corporate actions, significant events occurring after the close of trading in the security, and changes in overall market conditions. In addition, the closing prices of equity securities and futures that trade in markets outside U.S. time zones may be adjusted to reflect significant events that occur after the close of local trading but before the net asset value of each share class of each fund is determined. Fair valuations of investments that are not actively trading involve judgment and may differ materially from valuations that would have been used had greater market activity occurred.

Processes and structure – The series' board of trustees has designated the series' investment adviser to make fair value determinations, subject to board oversight. The investment adviser has established a Joint Fair Valuation Committee (the "Committee") to administer, implement and oversee the fair valuation process, and to make fair value decisions. The Committee regularly reviews its own fair value decisions, as well as decisions made under its standing instructions to the investment adviser's valuation team. The Committee reviews changes in fair value measurements from period to period, pricing vendor information and market data, and may, as deemed appropriate, update the fair valuation guidelines to better reflect the results of back testing and address new or evolving issues. Pricing decisions, processes and controls over security valuation are also subject to additional internal reviews facilitated by the investment adviser's global risk management group. The Committee reports changes to the fair valuation guidelines to the board of trustees. The series' board and audit committee also regularly review reports that describe fair value determinations and methods.

Classifications – The series' investment adviser classifies the funds' assets and liabilities into three levels based on the inputs used to value the assets or liabilities. Level 1 values are based on quoted prices in active markets for identical securities. Level 2 values are based on significant observable market inputs, such as quoted prices for similar securities and quoted prices in inactive markets. Certain securities trading outside the U.S. may transfer between Level 1 and Level 2 due to valuation adjustments resulting from significant market movements following the close of local trading. Level 3 values are based on significant unobservable inputs that reflect the investment adviser's determination of assumptions that market participants might reasonably use in valuing the securities. The valuation levels are not necessarily an indication of the risk or liquidity associated with the underlying investment. For example, U.S. government securities are reflected as Level 2 because the inputs used to determine fair value may not always be quoted prices in an active market. The following tables present the funds' valuation levels as of March 31, 2023 (dollars in thousands):

	Beginning value at 1/1/2023	Transfers into Level 3*	Purchases	Sales	Net realized gain	Unrealized appreciation	Transfers out of Level 3*	Ending value at 3/31/2023
Investment securities	\$44,712	\$—	\$—	\$—	\$—	\$1,837	\$—	\$46,549
Net unrealized appreciation during the period on Level 3 investment securities held at March 31, 2023								\$ 1,837

*Transfers into or out of Level 3 are based on the beginning market value of the quarter in which they occurred. These transfers are the result of changes in the availability of pricing sources and/or in the observability of significant inputs used in valuing the securities.

Unobservable inputs – Valuation of the fund's Level 3 securities is based on significant unobservable inputs that reflect the investment adviser's determination of assumptions that market participants might reasonably use in valuing the securities. The following table provides additional information used by the fund's investment adviser to fair value the fund's Level 3 securities (dollars in thousands):

	Value at 3/31/2023	Valuation techniques	Unobservable inputs	Range (if applicable)	Weighted average*	Impact to valuation from an increase in input†
Common stocks	\$27,761	Market comparable companies	Price/Cash flow multiple	5.8x	5.8x	Increase
			EV/Sales multiple	8.1x	8.1x	Increase
			DLOM	18% - 30%	18%	Decrease
Preferred securities	18,788	Transaction	Transaction Price	Not applicable	Not applicable	Not applicable
		Market comparable companies	EV/Sales multiple	8.1x - 12.9x	10.8x	Increase
			Net adjustment (decrease) based on movement of market comparables	44%	44%	Decrease
			DLOM	10% - 30%	21%	Decrease
Total	<u>\$46,549</u>					

*Weighted average is by relative fair value.

†This column represents the directional change in fair value of the Level 3 securities that would result in an increase from the corresponding input. Significant increases and decreases in these inputs in isolation could result in significantly higher or lower fair value measurements.
