

EQ ADVISORS TRUSTSM

Prospectus dated May 1, 2024

This Prospectus describes five (5) Portfolios offered by EQ Advisors Trust (the "Trust") and the Class IA, Class IB and Class K shares, as applicable, offered by the Trust on behalf of each Portfolio that you can choose as investment alternatives.* Each Portfolio has its own investment objective and strategies that are designed to meet different investment goals. This Prospectus contains information you should know before investing. Please read this Prospectus carefully before investing and keep it for future reference.

Equity Portfolios

EQ/Common Stock Index Portfolio

EQ/International Equity Index Portfolio

Multimanager Aggressive Equity Portfolio

Fixed Income Portfolios

EQ/Core Plus Bond Portfolio

EQ/Money Market Portfolio

* This Prospectus contains information about share classes and Portfolios that may not be available as an investment in your variable life or annuity product. Please consult your product prospectus to see which share classes and Portfolios are available under your contract.

The Securities and Exchange Commission and the Commodities Futures Trading Commission have not approved or disapproved these securities or passed upon the adequacy of this Prospectus. Any representation to the contrary is a criminal offense.

1. About the Portfolios

EQ/Common Stock Index Portfolio — Class IA, Class IB and Class K Shares

Investment Objective: Seeks to achieve a total return before expenses that approximates the total return performance of the Russell 3000[®] Index, including reinvestment of dividends, at a risk level consistent with that of the Russell 3000 Index.

FEES AND EXPENSES OF THE PORTFOLIO

The following table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Portfolio. The table below does not reflect any fees and expenses associated with variable life insurance contracts and variable annuity certificates and contracts ("Contracts"), which would increase overall fees and expenses. See the Contract prospectus for a description of those fees and expenses.

Shareholder Fees

(fees paid directly from your investment)

Not applicable.

Annual Portfolio Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

EQ/Common Stock Index Portfolio	Class IA Shares	Class IB Shares	Class K Shares
Management Fee	0.31%	0.31%	0.31%
Distribution and/or Service Fees (12b-1 fees)	0.25%	0.25%	0.00%
Other Expenses	0.14%	0.14%	0.14% ¹
Total Annual Portfolio Operating Expenses	0.70%	0.70%	0.45%
Fee Waiver and/or Expense Reimbursement ^{2,3}	(0.03)%	(0.03)%	(0.03)%
Total Annual Portfolio Operating Expenses After Fee Waiver and/or Expense Reimbursement	0.67%	0.67%	0.42%

¹ Based on estimated amounts for the current fiscal year.

² Pursuant to a contract, Equitable Investment Management Group, LLC (the "Adviser") has agreed to waive its and its affiliates' management, administrative and other fees and, if necessary, make payments to the Portfolio to limit the expenses of the Portfolio through April 30, 2025 (unless the Board of Trustees consents to an earlier revision or termination of this arrangement) ("Expense Limitation Arrangement") so that the annual operating expenses of the Portfolio (exclusive of taxes, interest, brokerage commissions, dividend and interest expenses on securities sold short, capitalized expenses, acquired fund fees and expenses, and extraordinary expenses not incurred in the ordinary course of the Portfolio's business) do not exceed an annual rate of average daily net assets of 0.67% for Class IA and Class IB shares and 0.42% for Class K shares of the Portfolio. The Expense Limitation Arrangement may be terminated by the Adviser at any time after April 30, 2025. The Adviser may be reimbursed the amount of any such waivers or payments in the future provided that the waivers or payments are reimbursed within three years of the waivers or payments being recorded and the Portfolio's expense ratio, after the reimbursement is taken into account, does not exceed the Portfolio's expense cap at the time of the waiver or the Portfolio's expense cap at the time of the reimbursement, whichever is lower.

³ Fee Waiver and/or Expense Reimbursement information has been restated to reflect the current Expense Limitation Arrangement.

Example

This Example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other portfolios. The Example assumes that you invest \$10,000 in the Portfolio for the periods indicated, that your investment has a 5% return each year, that the Portfolio's operating expenses remain the same, and that the Expense Limitation Arrangement is not renewed. This Example does not reflect any Contract-related fees and expenses including redemption fees (if any) at the Contract level. If such fees and expenses were reflected, the total expenses would be higher. Although your actual costs may be higher or lower, based on these assumptions, whether you redeem or hold your shares, your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class IA Shares	\$68	\$221	\$387	\$868
Class IB Shares	\$68	\$221	\$387	\$868
Class K Shares	\$43	\$141	\$249	\$564

PORTFOLIO TURNOVER

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Portfolio’s performance. During the most recent fiscal year, the Portfolio’s portfolio turnover rate was 2% of the average value of its portfolio.

INVESTMENTS, RISKS, AND PERFORMANCE

Principal Investment Strategy

The Portfolio generally invests at least 80% of its net assets, plus borrowings for investment purposes, in common stocks of companies represented in the Russell 3000[®] Index (“Russell 3000”). The Russell 3000 is an unmanaged index that measures the performance of the 3,000 largest U.S. companies based on total market capitalizations, which represents approximately 98% of the investable U.S. equity market. The Portfolio may purchase or sell futures contracts in lieu of investing directly in equity securities themselves.

The Portfolio’s investments are selected by a stratified sampling construction process in which the Sub-Adviser selects a sub-set of the 3,000 companies in the Russell 3000 based on the Sub-Adviser’s analysis of key risk factors and other characteristics. Such factors include industry weightings, market capitalizations, return variability, and yields. This strategy is commonly referred to as an indexing strategy.

Principal Risks

An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The value of your investment may fall, sometimes sharply, and you could lose money by investing in the Portfolio. There can be no assurance that the Portfolio will achieve its investment objective.

The following risks can negatively affect the Portfolio’s performance. The most significant risks as of the date of this Prospectus are presented first, followed by additional principal risks in alphabetical order.

Market Risk — The Portfolio is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect Portfolio performance. Securities markets also may experience long periods of decline in value. The value of a security can be more volatile than the market as a whole and can perform differently from the market as a whole. Any issuer of securities may perform poorly, causing the value of its securities to decline. Poor performance may be caused by a variety of factors, such as poor management decisions; reduced demand for the issuer’s goods or services; competitive pressures; negative perception in the marketplace; loss of major customers; strategic initiatives such as mergers or acquisitions and the market response to any such initiatives; and the historical and prospective earnings of the issuer. The value of a security also may decline due to general market conditions, such as real or perceived adverse economic or political conditions, inflation rates and/or investor expectations concerning such rates, changes in interest rates, recessions, or adverse investor sentiment generally. During a general downturn in the securities markets, multiple asset classes may decline in value simultaneously. Even when securities markets perform well, there can be no assurance that the investments held by the Portfolio will increase in value along with the broader market. Changes in the financial condition of (or other event affecting) a single issuer can impact an individual sector or industry, or the securities markets as a whole. The value of a security also may decline due to factors that affect a particular sector or industry.

Geopolitical events, including acts of terrorism, tensions, war or other open conflicts between nations, or political or economic dysfunction within some nations that are global economic powers or major producers of oil, may lead to overall instability in world economies and markets generally and have led, and may in the future lead, to increased market volatility and may have adverse long-term effects. World markets, or those in a particular region, may all react in similar fashion to important economic, political or other developments. Events such as environmental and natural disasters or other catastrophes, public health crises (such as epidemics and pandemics), social unrest, and cybersecurity incidents, and governments’ reactions (or failure to react) to such events, could cause uncertainty in the markets and may adversely affect the performance of the global economy. Impacts from climate change may include significant risks to global financial assets and economic growth. The extent and duration of such events and resulting market disruptions could be substantial and could magnify the impact of other risks to the Portfolio. The value and liquidity of the Portfolio’s investments may be negatively affected by developments in other countries and regions, whether or not the Portfolio invests in securities of issuers located in or with significant exposure to the countries or regions directly affected.

Changes in government or central bank policies and political, diplomatic and other events within the United States and abroad could cause uncertainty in the markets, may affect investor and consumer confidence, and may adversely impact financial markets and

the broader economy, perhaps suddenly and to a significant degree. High public debt in the United States and other countries creates ongoing systemic and market risks and policymaking uncertainty and may negatively affect economic conditions and the value of markets, sectors and companies in which the Portfolio invests.

In addition, markets and market participants are increasingly reliant on information data systems. Inaccurate data, software or other technology malfunctions, programming inaccuracies, unauthorized use or access, and similar circumstances may impair the performance of these systems and may have an adverse impact upon a single issuer, a group of issuers, or the market at large.

Equity Risk — In general, the values of stocks and other equity securities fluctuate, and sometimes widely fluctuate, in response to changes in a company's financial condition as well as general market, economic and political conditions and other factors. Stock markets tend to run in cycles, with periods when stock prices generally go up and periods when stock prices generally go down. However, stock markets also can move up and down rapidly and unpredictably. In addition, common stock prices may be particularly sensitive to rising interest rates, which increase borrowing costs and the costs of capital. The Portfolio may experience a significant or complete loss on its investment in an equity security.

Large-Cap Company Risk — Larger more established companies may be unable to respond quickly to new competitive challenges such as changes in technology and consumer tastes, which may lead to a decline in their market price. Many larger companies also may not be able to attain the high growth rate of successful smaller companies, especially during extended periods of economic expansion.

Mid-Cap and Small-Cap Company Risk — Mid-cap and small-cap companies carry additional risks because the operating histories of these companies tend to be more limited, their earnings and revenues less predictable (and some companies may be experiencing significant losses), and their share prices more volatile than those of larger, more established companies, all of which can negatively affect their value. In general, these risks are greater for small-cap companies than for mid-cap companies.

Index Strategy Risk — The Portfolio employs an index strategy and generally will not modify its index strategy to respond to changes in market trends or the economy, which means that the Portfolio may be particularly susceptible to a general decline in the market segment relating to the relevant index. In addition, although the index strategy attempts to closely track the relevant index, the Portfolio may not invest in all of the securities in the index. Therefore, there can be no assurance that the performance of the index strategy will match that of the relevant index. To the extent that the Portfolio utilizes a representative sampling approach, it may experience greater tracking error than it would if the Portfolio sought to replicate the index.

Sector Risk — From time to time, based on market or economic conditions, the Portfolio may have significant positions in one or more sectors of the market. To the extent the Portfolio invests more heavily in particular sectors, its performance will be especially sensitive to developments that significantly affect those sectors. Individual sectors may be more volatile, and may perform differently, than the broader market. The industries that constitute a sector may all react in the same way to economic, political, regulatory or other events.

Derivatives Risk — The Portfolio's investments in derivatives may rise or fall in value more rapidly than other investments and may reduce the Portfolio's returns and increase the volatility of the Portfolio's net asset value. Investing in derivatives involves investment techniques and risk analyses different from, and risks in some respects greater than, those associated with investing in more traditional investments, such as stocks and bonds. Derivatives may be leveraged such that a small investment can have a significant impact on the Portfolio's exposure to stock market values, interest rates, or other investments. As a result, a relatively small price movement in a derivatives contract may cause an immediate and substantial loss, and the Portfolio could lose more than the amount it invested. Some derivatives can have the potential for unlimited losses. In addition, it may be difficult or impossible for the Portfolio to purchase or sell certain derivatives in sufficient amounts to achieve the desired level of exposure, or to terminate or offset existing arrangements, which may result in a loss or may be costly to the Portfolio. Some derivatives are more sensitive to market price fluctuations and to interest rate changes than other investments. Derivatives may not behave as anticipated by the Portfolio, and derivatives strategies that are successful under certain market conditions may be less successful or unsuccessful under other market conditions. The Portfolio also may be exposed to losses if the counterparty in the transaction is unable or unwilling to fulfill its contractual obligation. In certain cases, the Portfolio may be hindered or delayed in exercising remedies against or closing out derivatives with a counterparty, resulting in additional losses. Derivatives also may be subject to the risk of mispricing or improper valuation, and valuation may be more difficult in times of market turmoil. Changes to the regulation of derivatives markets and mutual funds' use of derivatives may impact the Portfolio's ability to maintain its investments in derivatives, make derivatives more costly, limit their availability, adversely affect their value or performance, or otherwise disrupt markets.

Portfolio Management Risk — The Portfolio is subject to the risk that strategies used by an investment manager and its securities selections fail to produce the intended results. An investment manager's judgments or decisions about the quality, relative yield or value of, or market trends affecting, a particular security or issuer, industry, sector, region or market segment, or about the economy or interest rates, may be incorrect or otherwise may not produce the intended results, which may result in losses to the Portfolio.

In addition, many processes used in Portfolio management, including security selection, rely, in whole or in part, on the use of various technologies. The Portfolio may suffer losses if there are imperfections, errors or limitations in the quantitative, analytic or other tools, resources, information and data used, or the analyses employed or relied on, by an investment manager, or if such tools, resources, information or data are used incorrectly, fail to produce the desired results, or otherwise do not work as intended. There can be no assurance that the use of these technologies will result in effective investment decisions for the Portfolio.

Risk/Return Bar Chart and Table

The bar chart and table below provide some indication of the risks of investing in the Portfolio by showing changes in the Portfolio's performance from year to year and by showing how the Portfolio's average annual total returns for the past one, five and ten years through December 31, 2023, compared to the returns of a broad-based securities market index. Past performance is not an indication of future performance.

Class K shares have not commenced operations as of the date of this Prospectus.

The performance results do not reflect any Contract-related fees and expenses, which would reduce the performance results.

Calendar Year Annual Total Returns — Class IB

Average Annual Total Returns

	One Year	Five Years	Ten Years
EQ/Common Stock Index Portfolio - Class IA	25.12%	14.45%	10.80%
EQ/Common Stock Index Portfolio - Class IB	25.13%	14.45%	10.79%
Russell 3000® Index (reflects no deduction for fees, expenses, or taxes)	25.96%	15.16%	11.48%

WHO MANAGES THE PORTFOLIO

Investment Adviser: Equitable Investment Management Group, LLC ("EIM" or the "Adviser")

Portfolio Managers: The members of the team that are jointly and primarily responsible for the selection, monitoring and oversight of the Portfolio's Sub-Adviser are:

Name	Title	Date Began Managing the Portfolio
Kenneth T. Kozlowski, CFP®, CLU, ChFC	Executive Vice President and Chief Investment Officer of EIM	May 2011
Alwi Chan, CFA®	Senior Vice President and Deputy Chief Investment Officer of EIM	May 2009

Sub-Adviser: AllianceBernstein L.P. (“AllianceBernstein” or the “Sub-Adviser”)

Portfolio Managers: The members of the team that are jointly and primarily responsible for the securities selection, research and trading for the Portfolio are:

Name	Title	Date Began Managing the Portfolio
Joshua Lisser	Senior Vice President/Chief Investment Officer, Index Strategies of AllianceBernstein	January 2022
Geoff Tomlinson, CFA®	Portfolio Manager, Index Strategies of AllianceBernstein	January 2022

The Adviser is responsible for overseeing Sub-Advisers and recommending their hiring, termination and replacement to the Board of Trustees. The Adviser has been granted relief by the Securities and Exchange Commission to hire, terminate and replace Sub-Advisers for the Portfolio and enter into and amend sub-advisory agreements on behalf of the Portfolio subject to the approval of the Board of Trustees and without obtaining shareholder approval. The Adviser may not enter into a sub-advisory agreement on behalf of the Portfolio with an “affiliated person” of the Adviser unless the sub-advisory agreement is approved by the Portfolio’s shareholders. The relief does not extend to any increase in the advisory fee paid by the Portfolio to the Adviser; any such increase would be subject to shareholder approval.

PURCHASE AND REDEMPTION OF PORTFOLIO SHARES

The Portfolio’s shares are currently sold only to insurance company separate accounts in connection with Contracts issued by Equitable Financial Life Insurance Company (“Equitable Financial”) or other affiliated or unaffiliated insurance companies and The Equitable 401(k) Plan. Shares also may be sold to other portfolios managed by EIM that currently sell their shares to such accounts and to other investors eligible under applicable federal income tax regulations. Class K shares may be sold only to other portfolios of the Trust and certain group annuity plans.

The Portfolio does not have minimum initial or subsequent investment requirements. Shares of the Portfolio are redeemable on any business day (which typically is any day the New York Stock Exchange is open) upon receipt of a request. All redemption requests will be processed and payment with respect thereto will normally be made within seven days after tender. Please refer to your Contract prospectus for more information on purchasing and redeeming Portfolio shares.

TAX INFORMATION

The Portfolio’s shareholders are (or may include) insurance company separate accounts and other investors eligible under applicable federal income tax regulations. Distributions made by the Portfolio to such an account, and exchanges and redemptions of Portfolio shares made by such an account, ordinarily do not cause the holders of underlying Contracts to recognize income or gain for federal income tax purposes at the time of the distributions, exchanges or redemptions; the holders generally are taxed only on amounts they withdraw from their Contract. See the prospectus for your Contract for further tax information.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

The Portfolio is not sold directly to the general public but instead is offered as an underlying investment option for Contracts and to other eligible investors. The Portfolio and the Adviser and its affiliates may make payments to sponsoring insurance companies (and their affiliates) or other financial intermediaries for distribution and/or other services. These payments may create a conflict of interest by influencing an insurance company or other financial intermediary and your financial adviser to recommend the Portfolio over another investment or by influencing an insurance company to include the Portfolio as an underlying investment option in the Contract. The prospectus (or other offering document) for your Contract may contain additional information about these payments. Ask your financial adviser or visit your financial intermediary’s website for more information.

EQ/International Equity Index Portfolio — Class IA, Class IB and Class K Shares

Investment Objective: Seeks to achieve a total return (before expenses) that approximates the total return performance of a composite index comprised of 40% DJ Euro-STOXX 50 Index, 25% FTSE 100 Index, 25% TOPIX Index, and 10% S&P/ASX 200 Index, including reinvestment of dividends, at a risk level consistent with that of the composite index.

FEES AND EXPENSES OF THE PORTFOLIO

The following table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Portfolio. The table below does not reflect any fees and expenses associated with variable life insurance contracts and variable annuity certificates and contracts ("Contracts"), which would increase overall fees and expenses. See the Contract prospectus for a description of those fees and expenses.

Shareholder Fees

(fees paid directly from your investment)

Not applicable.

Annual Portfolio Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

EQ/International Equity Index Portfolio	Class IA Shares	Class IB Shares	Class K Shares
Management Fee	0.40%	0.40%	0.40%
Distribution and/or Service Fees (12b-1 fees)	0.25%	0.25%	0.00%
Other Expenses	0.15%	0.15%	0.15%
Total Annual Portfolio Operating Expenses	0.80%	0.80%	0.55%
Fee Waiver and/or Expense Reimbursement ^{1,2}	(0.08)%	(0.08)%	(0.08)%
Total Annual Portfolio Operating Expenses After Fee Waiver and/or Expense Reimbursement	0.72%	0.72%	0.47%

- ¹ Pursuant to a contract, Equitable Investment Management Group, LLC (the "Adviser") has agreed to waive its and its affiliates' management, administrative and other fees and, if necessary, make payments to the Portfolio to limit the expenses of the Portfolio through April 30, 2025 (unless the Board of Trustees consents to an earlier revision or termination of this arrangement) ("Expense Limitation Arrangement") so that the annual operating expenses (including Acquired Fund Fees and Expenses) of the Portfolio (exclusive of taxes, interest, brokerage commissions, dividend and interest expenses on securities sold short, capitalized expenses, and extraordinary expenses not incurred in the ordinary course of the Portfolio's business) do not exceed an annual rate of average daily net assets of 0.72% for Class IA and Class IB shares and 0.47% for Class K shares of the Portfolio. The Expense Limitation Arrangement may be terminated by the Adviser at any time after April 30, 2025. The Adviser may be reimbursed the amount of any such waivers or payments in the future provided that the waivers or payments are reimbursed within three years of the waivers or payments being recorded and the Portfolio's expense ratio, after the reimbursement is taken into account, does not exceed the Portfolio's expense cap at the time of the waiver or the Portfolio's expense cap at the time of the reimbursement, whichever is lower.
- ² Fee Waiver and/or Expense Reimbursement information has been restated to reflect the current Expense Limitation Arrangement.

Example

This Example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other portfolios. The Example assumes that you invest \$10,000 in the Portfolio for the periods indicated, that your investment has a 5% return each year, that the Portfolio's operating expenses remain the same, and that the Expense Limitation Arrangement is not renewed. This Example does not reflect any Contract-related fees and expenses including redemption fees (if any) at the Contract level. If such fees and expenses were reflected, the total expenses would be higher. Although your actual costs may be higher or lower, based on these assumptions, whether you redeem or hold your shares, your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class IA Shares	\$74	\$247	\$436	\$982
Class IB Shares	\$74	\$247	\$436	\$982
Class K Shares	\$48	\$168	\$299	\$682

PORTFOLIO TURNOVER

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Portfolio's performance. During the most recent fiscal year, the Portfolio's portfolio turnover rate was 8% of the average value of its portfolio.

INVESTMENTS, RISKS, AND PERFORMANCE

Principal Investment Strategy

Under normal circumstances the Portfolio invests at least 80% of its net assets, plus borrowings for investment purposes, in equity securities of companies represented in the FTSE 100 Index ("FTSE 100"), TOPIX Index ("TOPIX"), DJ EuroSTOXX 50 Index ("EuroSTOXX 50"), and S&P/ASX 200 Index ("S&P/ASX 200"). The Portfolio will allocate its assets approximately 25% to securities in the FTSE 100, 25% to securities in the TOPIX, 40% to securities in the EuroSTOXX 50, and 10% to securities in the S&P/ASX 200. Actual allocations may vary by up to 3%. The FTSE 100 represents the performance of the 100 largest UK-domiciled blue chip companies. The TOPIX comprises all companies listed on the First Section of the Tokyo Stock Exchange (approximately 2000 companies). The EuroSTOXX 50 index represents the performance of the 50 largest companies in 11 Eurozone countries. The S&P/ASX 200 represents the 200 largest and most liquid publicly listed companies in Australia. Each of these indices is weighted by market capitalization.

The Portfolio uses a strategy that is commonly referred to as an indexing strategy. With respect to investments in companies represented in the FTSE 100, EuroSTOXX 50, and S&P/ASX 200, the Sub-Adviser generally uses a replication technique, although a sampling approach may be used in certain circumstances. With respect to investments in companies represented in the TOPIX, the Sub-Adviser selects investments using a stratified sampling construction process in which the Sub-Adviser selects a sub-set of the companies represented in the index based on the Sub-Adviser's analysis of key risk factors and other characteristics. Such factors include industry weightings, market capitalizations, return variability, and yields.

Principal Risks

An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The value of your investment may fall, sometimes sharply, and you could lose money by investing in the Portfolio. There can be no assurance that the Portfolio will achieve its investment objective.

The following risks can negatively affect the Portfolio's performance. The most significant risks as of the date of this Prospectus are presented first, followed by additional principal risks in alphabetical order.

Market Risk — The Portfolio is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect Portfolio performance. Securities markets also may experience long periods of decline in value. The value of a security can be more volatile than the market as a whole and can perform differently from the market as a whole. Any issuer of securities may perform poorly, causing the value of its securities to decline. Poor performance may be caused by a variety of factors, such as poor management decisions; reduced demand for the issuer's goods or services; competitive pressures; negative perception in the marketplace; loss of major customers; strategic initiatives such as mergers or acquisitions and the market response to any such initiatives; and the historical and prospective earnings of the issuer. The value of a security also may decline due to general market conditions, such as real or perceived adverse economic or political conditions, inflation rates and/or investor expectations concerning such rates, changes in interest rates, recessions, or adverse investor sentiment generally. During a general downturn in the securities markets, multiple asset classes may decline in value simultaneously. Even when securities markets perform well, there can be no assurance that the investments held by the Portfolio will increase in value along with the broader market. Changes in the financial condition of (or other event affecting) a single issuer can impact an individual sector or industry, or the securities markets as a whole. The value of a security also may decline due to factors that affect a particular sector or industry.

Geopolitical events, including acts of terrorism, tensions, war or other open conflicts between nations, or political or economic dysfunction within some nations that are global economic powers or major producers of oil, may lead to overall instability in world economies and markets generally and have led, and may in the future lead, to increased market volatility and may have adverse long-term effects. World markets, or those in a particular region, may all react in similar fashion to important economic, political or other developments. Events such as environmental and natural disasters or other catastrophes, public health crises (such as epidemics and pandemics), social unrest, and cybersecurity incidents, and governments' reactions (or failure to react) to such events, could cause uncertainty in the markets and may adversely affect the performance of the global economy. Impacts from climate change may include significant risks to global financial assets and economic growth. The extent and duration of such events and resulting market disruptions could be substantial and could magnify the impact of other risks to the Portfolio. The value and liquidity of the Portfolio's investments may be negatively affected by developments in other countries and regions, whether or not the Portfolio invests in securities of issuers located in or with significant exposure to the countries or regions directly affected.

Changes in government or central bank policies and political, diplomatic and other events within the United States and abroad could cause uncertainty in the markets, may affect investor and consumer confidence, and may adversely impact financial markets and

the broader economy, perhaps suddenly and to a significant degree. High public debt in the United States and other countries creates ongoing systemic and market risks and policymaking uncertainty and may negatively affect economic conditions and the value of markets, sectors and companies in which the Portfolio invests.

In addition, markets and market participants are increasingly reliant on information data systems. Inaccurate data, software or other technology malfunctions, programming inaccuracies, unauthorized use or access, and similar circumstances may impair the performance of these systems and may have an adverse impact upon a single issuer, a group of issuers, or the market at large.

Equity Risk — In general, the values of stocks and other equity securities fluctuate, and sometimes widely fluctuate, in response to changes in a company's financial condition as well as general market, economic and political conditions and other factors. Stock markets tend to run in cycles, with periods when stock prices generally go up and periods when stock prices generally go down. However, stock markets also can move up and down rapidly and unpredictably. In addition, common stock prices may be particularly sensitive to rising interest rates, which increase borrowing costs and the costs of capital. The Portfolio may experience a significant or complete loss on its investment in an equity security.

Foreign Securities Risk — Investments in foreign securities involve risks in addition to those associated with investments in U.S. securities. Foreign markets may be less liquid, more volatile and subject to less government supervision and regulation than U.S. markets, and it may take more time to clear and settle trades involving foreign securities, which could negatively impact the Portfolio's investments and cause it to lose money. Security values also may be negatively affected by changes in the exchange rates between the U.S. dollar and foreign currencies. Differences between U.S. and foreign legal, political and economic systems, regulatory regimes and market practices, as well as changes in international trading patterns, trade barriers and other protectionist trade policies (including those of the United States), governmental instability, acts of terrorism, war or other open conflicts, or other political, diplomatic or economic actions, also may adversely impact security values. Foreign securities are also subject to the risks associated with the potential imposition of economic or other sanctions against a particular foreign country, its nationals, businesses or industries. World markets, or those in a particular region, may all react in similar fashion to important economic, political or other developments. Events and evolving conditions in certain economies or markets may alter the risks associated with investments tied to countries or regions that historically were perceived as comparatively stable and make such investments riskier and more volatile. Regardless of where a company is organized or its stock is traded, its performance may be significantly affected by events in regions from which it derives its profits or in which it conducts significant operations.

Currency Risk — Investments that are denominated in or that provide exposure to foreign currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar. Any such decline may erode or reverse any potential gains from an investment in securities denominated in foreign currency or may widen existing loss. In the case of hedging positions, there is the risk that the U.S. dollar will decline in value relative to the currency being hedged. Currency rates may fluctuate significantly over short periods of time.

European Economic Risk — The economies of European Union ("EU") member countries and their trading partners, as well as the broader global economy, may be adversely affected by changes in the euro's exchange rate, changes in EU or governmental regulations on trade, geopolitical and other events, including acts of terrorism, tensions, war or other open conflicts, and the threat of default or an actual default by an EU member country on its sovereign debt, which could negatively impact the Portfolio's investments and cause it to lose money. Events in Europe may continue to impact the economies of every European country and their economic partners. The ongoing Russia-Ukraine conflict, the resulting responses by the United States and other countries, and the potential for wider conflict have had, and could continue to have, severe adverse effects on regional and global economies and could further increase volatility and uncertainty in the financial markets. In addition, uncertainties regarding the viability of the EU have impacted and may continue to impact regional and global markets. There are ongoing concerns regarding the economies of certain European countries and/or their sovereign debt following the United Kingdom's withdrawal from the EU, commonly referred to as "Brexit". Any further withdrawals from the EU could cause significant regional and global market disruption, which may negatively impact the Portfolio's investments and cause it to lose money.

Geographic Focus Risk — To the extent the Portfolio invests a significant portion of its assets in securities of companies domiciled, or exercising the predominant part of their economic activity, in one country or geographic region, it assumes the risk that economic, political, social and environmental conditions in that particular country or region will have a significant impact on the Portfolio's investment performance and that the Portfolio's performance will be more volatile than the performance of more geographically diversified funds.

Large-Cap Company Risk — Larger more established companies may be unable to respond quickly to new competitive challenges such as changes in technology and consumer tastes, which may lead to a decline in their market price. Many larger companies also may not be able to attain the high growth rate of successful smaller companies, especially during extended periods of economic expansion.

Index Strategy Risk — The Portfolio employs an index strategy and generally will not modify its index strategy to respond to changes in market trends or the economy, which means that the Portfolio may be particularly susceptible to a general decline in the market segment relating to the relevant index. In addition, although the index strategy attempts to closely track the relevant index, the Portfolio may not invest in all of the securities in the index. Therefore, there can be no assurance that the performance of the index strategy will match that of the relevant index. To the extent that the Portfolio utilizes a representative sampling approach, it may experience greater tracking error than it would if the Portfolio sought to replicate the index.

Portfolio Management Risk — The Portfolio is subject to the risk that strategies used by an investment manager and its securities selections fail to produce the intended results. An investment manager's judgments or decisions about the quality, relative yield or value of, or market trends affecting, a particular security or issuer, industry, sector, region or market segment, or about the economy or interest rates, may be incorrect or otherwise may not produce the intended results, which may result in losses to the Portfolio. In addition, many processes used in Portfolio management, including security selection, rely, in whole or in part, on the use of various technologies. The Portfolio may suffer losses if there are imperfections, errors or limitations in the quantitative, analytic or other tools, resources, information and data used, or the analyses employed or relied on, by an investment manager, or if such tools, resources, information or data are used incorrectly, fail to produce the desired results, or otherwise do not work as intended. There can be no assurance that the use of these technologies will result in effective investment decisions for the Portfolio.

Sector Risk — From time to time, based on market or economic conditions, the Portfolio may have significant positions in one or more sectors of the market. To the extent the Portfolio invests more heavily in particular sectors, its performance will be especially sensitive to developments that significantly affect those sectors. Individual sectors may be more volatile, and may perform differently, than the broader market. The industries that constitute a sector may all react in the same way to economic, political, regulatory or other events.

Risk/Return Bar Chart and Table

The bar chart and table below provide some indication of the risks of investing in the Portfolio by showing changes in the Portfolio's performance from year to year and by showing how the Portfolio's average annual total returns for the past one, five and ten years through December 31, 2023, compared to the returns of a broad-based securities market index. The additional index shows how the Portfolio's performance compared with the returns of another index that has characteristics relevant to the Portfolio's investment strategies. Past performance is not an indication of future performance.

The performance results do not reflect any Contract-related fees and expenses, which would reduce the performance results.

Calendar Year Annual Total Returns — Class IB

Average Annual Total Returns

	One Year	Five Years	Ten Years
EQ/International Equity Index Portfolio - Class IA	19.01%	8.09%	3.69%
EQ/International Equity Index Portfolio - Class IB	19.04%	8.10%	3.69%
EQ/International Equity Index Portfolio - Class K	19.28%	8.36%	3.94%
MSCI EAFE® Index (reflects no deduction for fees, expenses, or taxes)	18.24%	8.16%	4.28%
International Proxy Index (reflects no deduction for fees, expenses, or taxes)	20.60%	8.81%	4.40%

WHO MANAGES THE PORTFOLIO

Investment Adviser: Equitable Investment Management Group, LLC ("EIM" or the "Adviser")

Portfolio Managers: The members of the team that are jointly and primarily responsible for the selection, monitoring and oversight of the Portfolio's Sub-Adviser are:

Name	Title	Date Began Managing the Portfolio
Kenneth T. Kozlowski, CFP [®] , CLU, ChFC	Executive Vice President and Chief Investment Officer of EIM	May 2011
Alwi Chan, CFA [®]	Senior Vice President and Deputy Chief Investment Officer of EIM	May 2009

Sub-Adviser: AllianceBernstein L.P. ("AllianceBernstein" or the "Sub-Adviser")

Portfolio Managers: The members of the team that are jointly and primarily responsible for the securities selection, research and trading for the Portfolio are:

Name	Title	Date Began Managing the Portfolio
Joshua Lisser	Senior Vice President/Chief Investment Officer, Index Strategies of AllianceBernstein	January 2022
Geoff Tomlinson, CFA [®]	Portfolio Manager, Index Strategies of AllianceBernstein	January 2022

The Adviser is responsible for overseeing Sub-Advisers and recommending their hiring, termination and replacement to the Board of Trustees. The Adviser has been granted relief by the Securities and Exchange Commission to hire, terminate and replace Sub-Advisers for the Portfolio and enter into and amend sub-advisory agreements on behalf of the Portfolio subject to the approval of the Board of Trustees and without obtaining shareholder approval. The Adviser may not enter into a sub-advisory agreement on behalf of the Portfolio with an "affiliated person" of the Adviser unless the sub-advisory agreement is approved by the Portfolio's shareholders. The relief does not extend to any increase in the advisory fee paid by the Portfolio to the Adviser; any such increase would be subject to shareholder approval.

PURCHASE AND REDEMPTION OF PORTFOLIO SHARES

The Portfolio's shares are currently sold only to insurance company separate accounts in connection with Contracts issued by Equitable Financial Life Insurance Company ("Equitable Financial") or other affiliated or unaffiliated insurance companies and The Equitable 401(k) Plan. Shares also may be sold to other portfolios managed by EIM that currently sell their shares to such accounts and to other investors eligible under applicable federal income tax regulations. Class K shares may be sold only to other portfolios of the Trust and certain group annuity plans.

The Portfolio does not have minimum initial or subsequent investment requirements. Shares of the Portfolio are redeemable on any business day (which typically is any day the New York Stock Exchange is open) upon receipt of a request. All redemption requests will be processed and payment with respect thereto will normally be made within seven days after tender. Please refer to your Contract prospectus for more information on purchasing and redeeming Portfolio shares.

TAX INFORMATION

The Portfolio's shareholders are (or may include) insurance company separate accounts and other investors eligible under applicable federal income tax regulations. Distributions made by the Portfolio to such an account, and exchanges and redemptions of Portfolio shares made by such an account, ordinarily do not cause the holders of underlying Contracts to recognize income or gain for federal income tax purposes at the time of the distributions, exchanges or redemptions; the holders generally are taxed only on amounts they withdraw from their Contract. See the prospectus for your Contract for further tax information.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

The Portfolio is not sold directly to the general public but instead is offered as an underlying investment option for Contracts and to other eligible investors. The Portfolio and the Adviser and its affiliates may make payments to sponsoring insurance companies (and their affiliates) or other financial intermediaries for distribution and/or other services. These payments may create a conflict of interest by influencing an insurance company or other financial intermediary and your financial adviser to recommend the Portfolio over another investment or by influencing an insurance company to include the Portfolio as an underlying investment option in the Contract. The prospectus (or other offering document) for your Contract may contain additional information about these payments. Ask your financial adviser or visit your financial intermediary's website for more information.

Multimanager Aggressive Equity Portfolio — Class IA, Class IB and Class K Shares

Investment Objective: Seeks to achieve long-term growth of capital.

FEES AND EXPENSES OF THE PORTFOLIO

The following table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Portfolio. The table below does not reflect any fees and expenses associated with variable life insurance contracts and variable annuity certificates and contracts ("Contracts"), which would increase overall fees and expenses. See the Contract prospectus for a description of those fees and expenses.

Shareholder Fees

(fees paid directly from your investment)

Not applicable.

Annual Portfolio Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

Multimanager Aggressive Equity Portfolio	Class IA Shares	Class IB Shares	Class K Shares
Management Fee	0.57%	0.57%	0.57%
Distribution and/or Service Fees (12b-1 fees)	0.25%	0.25%	0.00%
Other Expenses	0.16%	0.16%	0.16%
Acquired Fund Fees and Expenses	0.02%	0.02%	0.02%
Total Annual Portfolio Operating Expenses	1.00%	1.00%	0.75%

Example

This Example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other portfolios. The Example assumes that you invest \$10,000 in the Portfolio for the periods indicated, that your investment has a 5% return each year, and that the Portfolio's operating expenses remain the same. This Example does not reflect any Contract-related fees and expenses including redemption fees (if any) at the Contract level. If such fees and expenses were reflected, the total expenses would be higher. Although your actual costs may be higher or lower, based on these assumptions, whether you redeem or hold your shares, your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class IA Shares	\$102	\$318	\$552	\$1,225
Class IB Shares	\$102	\$318	\$552	\$1,225
Class K Shares	\$ 77	\$240	\$417	\$ 930

PORTFOLIO TURNOVER

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Portfolio's performance. During the most recent fiscal year, the Portfolio's portfolio turnover rate was 81% of the average value of its portfolio.

INVESTMENTS, RISKS, AND PERFORMANCE

Principal Investment Strategy

Under normal circumstances, the Portfolio intends to invest at least 80% of its net assets, plus borrowings for investment purposes, in equity securities. For purposes of this Portfolio, equity securities shall include common stocks, preferred stocks, and other equity securities, and financial instruments that derive their value from such securities. The Portfolio invests primarily in securities of large capitalization growth companies. For purposes of this Portfolio, large capitalization companies are those companies with market capitalizations within the range of the Russell 3000[®] Growth Index ("Russell 3000 Growth") at the time of investment (approximately \$20.75 million to \$3.01 trillion as of December 31, 2023). The size of companies in the Russell 3000 Growth changes with market conditions, which can result in changes to the market capitalization range of companies in the index. The Portfolio intends to invest primarily in common stocks, but may also invest in other equity

securities that a Sub-Adviser believes provide opportunities for capital growth. The Portfolio may invest up to 15% of its total assets in securities of foreign issuers, including emerging market securities and depositary receipts.

The Adviser will generally allocate the Portfolio's assets among three or more Sub-Advisers, each of which manages its portion of the Portfolio using different yet complementary investment strategies. Under normal circumstances, one portion of the Portfolio will seek to track the performance of a particular index ("Index Allocated Portion"), and the other portions of the Portfolio will be actively managed ("Active Allocated Portions"). Under normal circumstances, the Adviser anticipates allocating approximately 50% of the Portfolio's net assets to the Index Allocated Portion and the remaining 50% of the Portfolio's net assets among the Active Allocated Portions. These percentages are targets established by the Adviser and actual allocations between the portions may deviate from these targets by up to 20% of the Portfolio's net assets.

The Index Allocated Portion seeks to track the performance (before fees and expenses) of the Russell 3000 Growth. This strategy is commonly referred to as an indexing strategy. Generally, the Index Allocated Portion utilizes a sampling construction process in which the Index Allocated Portion invests in a sub-set of the companies represented in the Russell 3000 Growth based on the Sub-Adviser's analysis of key risk factors and characteristics. Such factors and characteristics include industry weightings, market capitalizations, return variability and yield. The Index Allocated Portion also may invest up to 15% of its assets in exchange-traded funds ("ETFs") and up to 40% of its assets in equity index futures on one or more equity indices.

Each Active Allocated Portion invests primarily in equity securities of companies whose above-average prospective earnings growth is not fully reflected, in the view of the Sub-Adviser, in current market valuations. The Active Allocated Portions may invest up to 25% of their total assets in securities of foreign companies, including companies based in developing countries. A Sub-Adviser may sell a security for a variety of reasons, such as to make other investments believed by the Sub-Adviser to offer superior investment opportunities.

The Portfolio may invest in derivatives. It is anticipated that the Portfolio's derivative instruments will consist primarily of equity index futures. The Portfolio's investments in derivatives may be deemed to involve the use of leverage because the Portfolio is not required to invest the full market value of the contract upon entering into the contract but participates in gains and losses on the full contract price. The use of derivatives also may be deemed to involve the use of leverage because the heightened price sensitivity of some derivatives to market changes may magnify the Portfolio's gain or loss. The Portfolio's investments in derivatives may require it to maintain a percentage of its assets in cash and cash equivalent instruments to serve as margin or collateral for the Portfolio's obligations under derivative transactions.

Principal Risks

An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The value of your investment may fall, sometimes sharply, and you could lose money by investing in the Portfolio. There can be no assurance that the Portfolio will achieve its investment objective.

The following risks can negatively affect the Portfolio's performance. The most significant risks as of the date of this Prospectus are presented first, followed by additional principal risks in alphabetical order.

Market Risk — The Portfolio is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect Portfolio performance. Securities markets also may experience long periods of decline in value. The value of a security can be more volatile than the market as a whole and can perform differently from the market as a whole. Any issuer of securities may perform poorly, causing the value of its securities to decline. Poor performance may be caused by a variety of factors, such as poor management decisions; reduced demand for the issuer's goods or services; competitive pressures; negative perception in the marketplace; loss of major customers; strategic initiatives such as mergers or acquisitions and the market response to any such initiatives; and the historical and prospective earnings of the issuer. The value of a security also may decline due to general market conditions, such as real or perceived adverse economic or political conditions, inflation rates and/or investor expectations concerning such rates, changes in interest rates, recessions, or adverse investor sentiment generally. During a general downturn in the securities markets, multiple asset classes may decline in value simultaneously. Even when securities markets perform well, there can be no assurance that the investments held by the Portfolio will increase in value along with the broader market. Changes in the financial condition of (or other event affecting) a single issuer can impact an individual sector or industry, or the securities markets as a whole. The value of a security also may decline due to factors that affect a particular sector or industry.

Geopolitical events, including acts of terrorism, tensions, war or other open conflicts between nations, or political or economic dysfunction within some nations that are global economic powers or major producers of oil, may lead to overall instability in world economies and markets generally and have led, and may in the future lead, to increased market volatility and may have adverse

long-term effects. World markets, or those in a particular region, may all react in similar fashion to important economic, political or other developments. Events such as environmental and natural disasters or other catastrophes, public health crises (such as epidemics and pandemics), social unrest, and cybersecurity incidents, and governments' reactions (or failure to react) to such events, could cause uncertainty in the markets and may adversely affect the performance of the global economy. Impacts from climate change may include significant risks to global financial assets and economic growth. The extent and duration of such events and resulting market disruptions could be substantial and could magnify the impact of other risks to the Portfolio. The value and liquidity of the Portfolio's investments may be negatively affected by developments in other countries and regions, whether or not the Portfolio invests in securities of issuers located in or with significant exposure to the countries or regions directly affected.

Changes in government or central bank policies and political, diplomatic and other events within the United States and abroad could cause uncertainty in the markets, may affect investor and consumer confidence, and may adversely impact financial markets and the broader economy, perhaps suddenly and to a significant degree. High public debt in the United States and other countries creates ongoing systemic and market risks and policymaking uncertainty and may negatively affect economic conditions and the value of markets, sectors and companies in which the Portfolio invests.

In addition, markets and market participants are increasingly reliant on information data systems. Inaccurate data, software or other technology malfunctions, programming inaccuracies, unauthorized use or access, and similar circumstances may impair the performance of these systems and may have an adverse impact upon a single issuer, a group of issuers, or the market at large.

Equity Risk — In general, the values of stocks and other equity securities fluctuate, and sometimes widely fluctuate, in response to changes in a company's financial condition as well as general market, economic and political conditions and other factors. Stock markets tend to run in cycles, with periods when stock prices generally go up and periods when stock prices generally go down. However, stock markets also can move up and down rapidly and unpredictably. In addition, common stock prices may be particularly sensitive to rising interest rates, which increase borrowing costs and the costs of capital. The Portfolio may experience a significant or complete loss on its investment in an equity security.

Mid-Cap and Small-Cap Company Risk — Mid-cap and small-cap companies carry additional risks because the operating histories of these companies tend to be more limited, their earnings and revenues less predictable (and some companies may be experiencing significant losses), and their share prices more volatile than those of larger, more established companies, all of which can negatively affect their value. In general, these risks are greater for small-cap companies than for mid-cap companies.

Sector Risk — From time to time, based on market or economic conditions, the Portfolio may have significant positions in one or more sectors of the market. To the extent the Portfolio invests more heavily in particular sectors, its performance will be especially sensitive to developments that significantly affect those sectors. Individual sectors may be more volatile, and may perform differently, than the broader market. The industries that constitute a sector may all react in the same way to economic, political, regulatory or other events. The Portfolio may have significant exposure to one or more sectors of the market through its direct investments in securities of operating companies as well as indirectly through its investments in ETFs.

Information Technology Sector Risk — Risks associated with investing in the information technology sector include the intense competition to which information technology companies may be subject; the dramatic and often unpredictable changes in growth rates and competition for qualified personnel among information technology companies; effects on profitability from being heavily dependent on patent and intellectual property rights and the loss or impairment of those rights; rapid product obsolescence due to technological developments and frequent new product introduction; and increased government and regulatory scrutiny.

Index Strategy Risk — The Index Allocated Portion of the Portfolio employs an index strategy and generally will not modify its index strategy to respond to changes in market trends or the economy, which means that the Portfolio may be particularly susceptible to a general decline in the market segment relating to the relevant index.

To the extent that the securities of a limited number of companies represent a significant percentage of the relevant index, the Portfolio may be subject to more risk because changes in the value of a single security may have a more significant effect, either positive or negative, on the Portfolio's net asset value. To the extent that the index has a significant weighting in a particular sector, the Portfolio will be subject to the risks associated with that sector and may experience greater performance volatility than a portfolio that seeks to track the performance of an index that is more broadly diversified.

Tracking Error Risk — The Index Allocated Portion of the Portfolio seeks to track the performance (before fees and expenses) of the Russell 3000 Growth, but it may not be successful in doing so. The divergence, positive or negative, between the performance of the Index Allocated Portion and the Russell 3000 Growth is called "tracking error." Because the Index Allocated Portion utilizes a sampling construction process, it may experience tracking error to a greater extent than if it invested in all of the securities in the

Russell 3000 Growth. In addition, because the Index Allocated Portion may invest up to 40% of its assets in futures on equity indices other than the Russell 3000 Growth, the tracking error may be significant.

Portfolio Management Risk — The Portfolio is subject to the risk that strategies used by an investment manager and its securities selections fail to produce the intended results. An investment manager's judgments or decisions about the quality, relative yield or value of, or market trends affecting, a particular security or issuer, industry, sector, region or market segment, or about the economy or interest rates, may be incorrect or otherwise may not produce the intended results, which may result in losses to the Portfolio. In addition, many processes used in Portfolio management, including security selection, rely, in whole or in part, on the use of various technologies. The Portfolio may suffer losses if there are imperfections, errors or limitations in the quantitative, analytic or other tools, resources, information and data used, or the analyses employed or relied on, by an investment manager, or if such tools, resources, information or data are used incorrectly, fail to produce the desired results, or otherwise do not work as intended. There can be no assurance that the use of these technologies will result in effective investment decisions for the Portfolio.

Cash Management Risk — Upon entering into certain derivatives contracts, such as futures contracts, and to maintain open positions in certain derivatives contracts, the Portfolio may be required to post collateral for the contract, the amount of which may vary. In addition, the Portfolio may maintain cash and cash equivalent positions as part of the Portfolio's strategy in order to take advantage of investment opportunities as they arise, to manage the Portfolio's market exposure, and for other portfolio management purposes. As such, the Portfolio may maintain cash balances, which may be significant, with counterparties such as the Trust's custodian or its affiliates. Maintaining larger cash and cash equivalent positions could negatively affect the Portfolio's performance due to missed investment opportunities and may also subject the Portfolio to additional risks, such as increased credit risk with respect to the custodian bank holding the assets and the risk that a counterparty may be unable or unwilling, or perceived as unable or unwilling, to honor its obligations.

Cash may be invested in institutional money market funds. An institutional money market fund does not maintain a stable \$1.00 net asset value per share; rather the fund's net asset value fluctuates with changes in the values of the securities in which the fund invests, and the fund's shares may be worth more or less than their original purchase price. An institutional money market fund is permitted to impose a liquidity fee upon the redemption of fund shares and, effective October 2, 2024, generally will be required to impose a liquidity fee when the fund experiences daily net redemptions of fund shares that exceed certain levels.

Derivatives Risk — The Portfolio's investments in derivatives may rise or fall in value more rapidly than other investments and may reduce the Portfolio's returns and increase the volatility of the Portfolio's net asset value. Investing in derivatives involves investment techniques and risk analyses different from, and risks in some respects greater than, those associated with investing in more traditional investments, such as stocks and bonds. Derivatives may be leveraged such that a small investment can have a significant impact on the Portfolio's exposure to stock market values, interest rates, or other investments. As a result, a relatively small price movement in a derivatives contract may cause an immediate and substantial loss, and the Portfolio could lose more than the amount it invested. Some derivatives can have the potential for unlimited losses. In addition, it may be difficult or impossible for the Portfolio to purchase or sell certain derivatives in sufficient amounts to achieve the desired level of exposure, or to terminate or offset existing arrangements, which may result in a loss or may be costly to the Portfolio. Some derivatives are more sensitive to market price fluctuations and to interest rate changes than other investments. Derivatives may not behave as anticipated by the Portfolio, and derivatives strategies that are successful under certain market conditions may be less successful or unsuccessful under other market conditions. The Portfolio also may be exposed to losses if the counterparty in the transaction is unable or unwilling to fulfill its contractual obligation. In certain cases, the Portfolio may be hindered or delayed in exercising remedies against or closing out derivatives with a counterparty, resulting in additional losses. Derivatives also may be subject to the risk of mispricing or improper valuation, and valuation may be more difficult in times of market turmoil. Changes to the regulation of derivatives markets and mutual funds' use of derivatives may impact the Portfolio's ability to maintain its investments in derivatives, make derivatives more costly, limit their availability, adversely affect their value or performance, or otherwise disrupt markets.

ETFs Risk — When the Portfolio invests in an ETF, it will indirectly bear its proportionate share of the fees and expenses incurred by the ETF. These fees and expenses are in addition to the advisory fees and other expenses that the Portfolio and its shareholders bear directly in connection with the Portfolio's own operations. As a result, the Portfolio's shareholders will be subject to two layers of fees and expenses with respect to investments in the Portfolio. The cost of investing in the Portfolio, therefore, may be higher than the cost of investing in a mutual fund that invests directly in individual stocks and bonds. In addition, the Portfolio's net asset value will be subject to fluctuations in the market values of the ETFs in which it invests. The Portfolio is also subject to the risks associated with the securities or other investments in which the ETFs invest, and the ability of the Portfolio to meet its investment objective will directly depend on the ability of the ETFs to meet their investment objectives. A passively managed (or index-based) ETF's performance may not match that of the index it seeks to track. An actively managed ETF's performance will reflect its manager's ability to make investment decisions that are suited to achieving the ETF's investment objective. Furthermore, it is possible that an active trading market for an ETF may not develop or be maintained, in which case the liquidity and value of the Portfolio's investment in the ETF could be substantially and adversely affected. The extent to which the investment performance and risks associated with the Portfolio

correlate to those of a particular ETF will depend upon the extent to which the Portfolio's assets are allocated from time to time for investment in the ETF, which will vary.

Foreign Securities Risk — Investments in foreign securities, including depositary receipts, involve risks in addition to those associated with investments in U.S. securities. Foreign markets may be less liquid, more volatile and subject to less government supervision and regulation than U.S. markets, and it may take more time to clear and settle trades involving foreign securities, which could negatively impact the Portfolio's investments and cause it to lose money. Security values also may be negatively affected by changes in the exchange rates between the U.S. dollar and foreign currencies. Differences between U.S. and foreign legal, political and economic systems, regulatory regimes and market practices, as well as changes in international trading patterns, trade barriers and other protectionist trade policies (including those of the United States), governmental instability, acts of terrorism, war or other open conflicts, or other political, diplomatic or economic actions, also may adversely impact security values. Foreign securities are also subject to the risks associated with the potential imposition of economic or other sanctions against a particular foreign country, its nationals, businesses or industries. World markets, or those in a particular region, may all react in similar fashion to important economic, political or other developments. Events and evolving conditions in certain economies or markets may alter the risks associated with investments tied to countries or regions that historically were perceived as comparatively stable and make such investments riskier and more volatile. Regardless of where a company is organized or its stock is traded, its performance may be significantly affected by events in regions from which it derives its profits or in which it conducts significant operations.

Currency Risk — Investments that are denominated in or that provide exposure to foreign currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar. Any such decline may erode or reverse any potential gains from an investment in securities denominated in foreign currency or may widen existing loss. In the case of hedging positions, there is the risk that the U.S. dollar will decline in value relative to the currency being hedged. Currency rates may fluctuate significantly over short periods of time.

Emerging Markets Risk — The risks associated with investments in emerging market countries often are significant, and vary from jurisdiction to jurisdiction and company to company. Investments in emerging market countries are more susceptible to loss than investments in more developed foreign countries and may present market, credit, currency, liquidity, legal, political, technical and other risks different from, or greater than, the risks of investing in more developed foreign countries. Emerging market countries may be more likely to experience rapid and significant adverse developments in their political or economic structures, intervene in financial markets, restrict foreign investments, impose high withholding or other taxes on foreign investments, impose restrictive exchange control regulations, or nationalize or expropriate the assets of private companies, which may have negative impacts on transaction costs, market price, investment returns and the legal rights and remedies available to the Portfolio. In addition, the securities markets of emerging market countries generally are smaller, less liquid and more volatile than those of more developed foreign countries, and emerging market countries often have less uniformity in regulatory, accounting, auditing and financial reporting requirements or standards, which may impact the availability and quality of information about issuers, and less reliable clearance and settlement, registration and custodial procedures. Emerging market countries also may be subject to high inflation and rapid currency devaluations, and currency-hedging techniques may be unavailable in certain emerging market countries. In addition, some emerging market countries may be heavily dependent on international trade, which can materially affect their securities markets. Securities of issuers traded on foreign exchanges may be suspended. The likelihood of such suspensions may be higher for securities of issuers in emerging market countries than in countries with more developed markets.

Large-Cap Company Risk — Larger more established companies may be unable to respond quickly to new competitive challenges such as changes in technology and consumer tastes, which may lead to a decline in their market price. Many larger companies also may not be able to attain the high growth rate of successful smaller companies, especially during extended periods of economic expansion.

Leveraging Risk — When the Portfolio leverages its holdings, the value of an investment in the Portfolio will be more volatile and all other risks will tend to be compounded. Investments that create leverage can result in losses to the Portfolio that exceed the amount originally invested and may accelerate the rate of losses (some of which may be sudden or substantial). For certain investments that create leverage, relatively small market fluctuations can result in large changes in the value of such investments. There can be no assurance that the Portfolio's use of any leverage will be successful.

Multiple Sub-Adviser Risk — To a significant extent, the Portfolio's performance will depend on the success of the Adviser in allocating the Portfolio's assets to Sub-Advisers and its selection and oversight of the Sub-Advisers. The Sub-Advisers' investment strategies may not work together as planned, which could adversely affect the Portfolio's performance. Because each Sub-Adviser directs the trading for its own portion of the Portfolio, and does not aggregate its transactions with those of the other Sub-Adviser, the Portfolio may incur higher brokerage costs than would be the case if a single Sub-Adviser were managing the entire Portfolio. In addition, while the Adviser seeks to allocate the Portfolio's assets among the Portfolio's Sub-Advisers in a manner that it believes is consistent

with achieving the Portfolio's investment objective(s), the Adviser is subject to conflicts of interest in allocating the Portfolio's assets among Sub-Advisers, including affiliated Sub-Advisers, because the Adviser pays different fees to the Sub-Advisers and due to other factors that could impact the Adviser's or its affiliates' revenues and profits.

Risk/Return Bar Chart and Table

The bar chart and table below provide some indication of the risks of investing in the Portfolio by showing changes in the Portfolio's performance from year to year and by showing how the Portfolio's average annual total returns for the past one, five and ten years through December 31, 2023, compared to the returns of a broad-based securities market index. The additional securities market index shows how the Portfolio's performance compared with the returns of another index that has characteristics relevant to the Portfolio's investment strategies. Past performance is not an indication of future performance.

Prior to April 2014, the Portfolio employed a volatility management strategy; returns prior to that date may have been different if the Portfolio had followed its current strategy. For periods prior to June 2014, the performance shown below is that of the Portfolio's predecessor, a series of EQ Premier VIP Trust that had a substantially identical investment objective, policies and strategies.

The performance results do not reflect any Contract-related fees and expenses, which would reduce the performance results.

Calendar Year Annual Total Returns — Class IB

Average Annual Total Returns

	One Year	Five Years	Ten Years
Multimanager Aggressive Equity Portfolio - Class IA	38.30%	15.92%	12.48%
Multimanager Aggressive Equity Portfolio - Class IB	38.29%	15.92%	12.48%
Multimanager Aggressive Equity Portfolio - Class K	38.63%	16.21%	12.73%
Russell 3000® Index ¹ (reflects no deduction for fees, expenses, or taxes)	25.96%	15.16%	11.48%
Russell 3000® Growth Index (reflects no deduction for fees, expenses, or taxes)	41.21%	18.85%	14.33%

¹ This index replaced the prior broad-based securities market index in order to satisfy a change in regulatory requirements.

WHO MANAGES THE PORTFOLIO

Investment Adviser: Equitable Investment Management Group, LLC ("EIM" or the "Adviser")

Portfolio Managers: The members of the team that are jointly and primarily responsible for (i) the selection, monitoring and oversight of the Portfolio's Sub-Advisers, and (ii) allocating assets among the Portfolio's Allocated Portions are:

Name	Title	Date Began Managing the Portfolio
Kenneth T. Kozlowski, CFP [®] , CLU, ChFC	Executive Vice President and Chief Investment Officer of EIM	May 2011
Alwi Chan, CFA [®]	Senior Vice President and Deputy Chief Investment Officer of EIM	February 2010

Sub-Adviser: AllianceBernstein L.P. ("AllianceBernstein" or the "Sub-Adviser")

Portfolio Managers: The members of the team that are jointly and primarily responsible for the securities selection, research and trading for the Index Allocated Portion of the Portfolio are:

Name	Title	Date Began Managing the Portfolio
Joshua Lisser	Senior Vice President/Chief Investment Officer, Index Strategies of AllianceBernstein	January 2022
Geoff Tomlinson, CFA [®]	Portfolio Manager, Index Strategies of AllianceBernstein	January 2022

Sub-Adviser: 1832 Asset Management U.S. Inc. ("1832 Asset Management" or the "Sub-Adviser")

Portfolio Manager: The individual primarily responsible for the securities selection, research and trading for a portion of the Active Allocated Portion of the Portfolio is:

Name	Title	Date Began Managing the Portfolio
Noah Blackstein	Vice President and Senior Portfolio Manager of 1832 Asset Management	September 2010

Sub-Adviser: T. Rowe Price Associates, Inc. ("T. Rowe Price" or the "Sub-Adviser")

Portfolio Manager: The individual primarily responsible for the securities selection, research and trading for a portion of the Active Allocated Portion of the Portfolio is:

Name	Title	Date Began Managing the Portfolio
Taymour R. Tamaddon, CFA [®]	Vice President and Portfolio Manager of T. Rowe Price	January 2017

Sub-Adviser: Westfield Capital Management Company, L.P. (“Westfield” or the “Sub-Adviser”)

Portfolio Managers: The members of the team that are jointly and primarily responsible for the securities selection, research and trading for a portion of the Active Allocated Portion of the Portfolio are:

Name	Title	Date Began Managing the Portfolio
William A. Muggia	President, Chief Executive Officer and Chief Investment Officer of Westfield	September 2010
Richard D. Lee, CFA [®]	Managing Partner and Chief Investment Officer of Westfield	May 2018
Ethan J. Meyers, CFA [®]	Managing Partner and Director of Research of Westfield	September 2010
John M. Montgomery	Managing Partner, Portfolio Strategist and Chief Operating Officer of Westfield	September 2010

The Adviser is responsible for overseeing Sub-Advisers and recommending their hiring, termination and replacement to the Board of Trustees. The Adviser has been granted relief by the Securities and Exchange Commission to hire, terminate and replace Sub-Advisers for the Portfolio and enter into and amend sub-advisory agreements on behalf of the Portfolio subject to the approval of the Board of Trustees and without obtaining shareholder approval. The Adviser may not enter into a sub-advisory agreement on behalf of the Portfolio with an “affiliated person” of the Adviser unless the sub-advisory agreement is approved by the Portfolio’s shareholders. The relief does not extend to any increase in the advisory fee paid by the Portfolio to the Adviser; any such increase would be subject to shareholder approval.

PURCHASE AND REDEMPTION OF PORTFOLIO SHARES

The Portfolio’s shares are currently sold only to insurance company separate accounts in connection with Contracts issued by Equitable Financial Life Insurance Company (“Equitable Financial”) or other affiliated or unaffiliated insurance companies and The Equitable 401(k) Plan. Shares also may be sold to other portfolios managed by EIM that currently sell their shares to such accounts and to other investors eligible under applicable federal income tax regulations. Class K shares may be sold only to other portfolios of the Trust and certain group annuity plans.

The Portfolio does not have minimum initial or subsequent investment requirements. Shares of the Portfolio are redeemable on any business day (which typically is any day the New York Stock Exchange is open) upon receipt of a request. All redemption requests will be processed and payment with respect thereto will normally be made within seven days after tender. Please refer to your Contract prospectus for more information on purchasing and redeeming Portfolio shares.

TAX INFORMATION

The Portfolio’s shareholders are (or may include) insurance company separate accounts and other investors eligible under applicable federal income tax regulations. Distributions made by the Portfolio to such an account, and exchanges and redemptions of Portfolio shares made by such an account, ordinarily do not cause the holders of underlying Contracts to recognize income or gain for federal income tax purposes at the time of the distributions, exchanges or redemptions; the holders generally are taxed only on amounts they withdraw from their Contract. See the prospectus for your Contract for further tax information.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

The Portfolio is not sold directly to the general public but instead is offered as an underlying investment option for Contracts and to other eligible investors. The Portfolio and the Adviser and its affiliates may make payments to sponsoring insurance companies (and their affiliates) or other financial intermediaries for distribution and/or other services. These payments may create a conflict of interest by influencing an insurance company or other financial intermediary and your financial adviser to recommend the Portfolio over another investment or by influencing an insurance company to include the Portfolio as an underlying investment option in the Contract. The prospectus (or other offering document) for your Contract may contain additional information about these payments. Ask your financial adviser or visit your financial intermediary’s website for more information.

EQ/Core Plus Bond Portfolio — Class IA, Class IB and Class K Shares

Investment Objective: Seeks to achieve high total return through a combination of current income and capital appreciation.

FEES AND EXPENSES OF THE PORTFOLIO

The following table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Portfolio. The table below does not reflect any fees and expenses associated with variable life insurance contracts and variable annuity certificates and contracts ("Contracts"), which would increase overall fees and expenses. See the Contract prospectus for a description of those fees and expenses.

Shareholder Fees

(fees paid directly from your investment)

Not applicable.

Annual Portfolio Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

EQ/Core Plus Bond Portfolio	Class IA Shares	Class IB Shares	Class K Shares
Management Fee ¹	0.60%	0.60%	0.60%
Distribution and/or Service Fees (12b-1 fees) ¹	0.25%	0.25%	0.00%
Other Expenses ¹	0.24%	0.24%	0.24%
Total Annual Portfolio Operating Expenses ¹	1.09%	1.09%	0.84%
Fee Waiver and/or Expense Reimbursement ^{1,2}	(0.16)%	(0.16)%	(0.16)%
Total Annual Portfolio Operating Expenses After Fee Waiver and/or Expense Reimbursement ¹	0.93%	0.93%	0.68%

¹ The fees and expenses shown in the table are based on amounts incurred by the Portfolio's predecessor, which was managed by the Adviser and had a substantially identical investment objective, policies and strategies as the Portfolio. The predecessor portfolio merged into the Portfolio in a shell reorganization on November 12, 2023, and the Portfolio succeeded to the accounting and performance histories of the predecessor portfolio.

² Pursuant to a contract, Equitable Investment Management Group, LLC (the "Adviser") has agreed to waive its and its affiliates' management, administrative and other fees and, if necessary, make payments to the Portfolio to limit the expenses of the Portfolio through April 30, 2025 (unless the Board of Trustees consents to an earlier revision or termination of this arrangement) ("Expense Limitation Arrangement") so that the annual operating expenses (including Acquired Fund Fees and Expenses) of the Portfolio (exclusive of taxes, interest, brokerage commissions, dividend and interest expenses on securities sold short, and extraordinary expenses not incurred in the ordinary course of the Portfolio's business) do not exceed an annual rate of average daily net assets of 0.93% for Class IA and Class IB shares and 0.68% for Class K shares of the Portfolio. The Expense Limitation Arrangement may be terminated by the Adviser at any time after April 30, 2025. The Adviser may be reimbursed the amount of any such waivers or payments (including any such waivers or payments with respect to the predecessor portfolio prior to the shell reorganization) in the future provided that the waivers or payments are reimbursed within three years of the waivers or payments being recorded and the Portfolio's expense ratio, after the reimbursement is taken into account, does not exceed the Portfolio's expense cap at the time of the waiver or the Portfolio's expense cap at the time of the reimbursement, whichever is lower.

Example

This example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other portfolios. The example assumes that you invest \$10,000 in the Portfolio for the periods indicated, that your investment has a 5% return each year, that the Portfolio's operating expenses remain the same, and that the Expense Limitation Arrangement is not renewed. This example does not reflect any Contract-related fees and expenses, including redemption fees (if any) at the Contract level. If such fees and expenses were reflected, the total expenses would be higher. Although your actual costs may be higher or lower, based on these assumptions, whether you redeem or hold your shares, your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class IA Shares	\$95	\$331	\$585	\$1,314
Class IB Shares	\$95	\$331	\$585	\$1,314
Class K Shares	\$69	\$252	\$450	\$1,022

PORTFOLIO TURNOVER

The Portfolio pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs. These costs, which are not reflected in annual fund

operating expenses or in the example, affect the Portfolio's performance. The portfolio turnover rate of the Portfolio's predecessor during its most recent fiscal year was 145% of the average value of its portfolio.

INVESTMENTS, RISKS, AND PERFORMANCE

Principal Investment Strategy

Under normal circumstances, the Portfolio invests at least 80% of its net assets, plus borrowings for investment purposes, in a diversified portfolio of U.S. and foreign bonds or other debt securities of varying maturities and other instruments that provide investment exposure to such debt securities, including forwards or derivatives such as options, futures contracts or swap agreements.

Under normal circumstances, the Portfolio invests primarily in a diversified mix of U.S. dollar-denominated investment grade fixed income securities, particularly U.S. government securities, corporate securities and mortgage- and asset-backed securities. The Portfolio may invest in securities of any maturity. Under normal circumstances, it is expected that the average portfolio duration of the Portfolio will be within 5 years of the duration of the benchmark. As of December 31, 2023, the average duration of the benchmark, the Bloomberg U.S. Aggregate Bond Index, was 6.17 years. Duration is a measure used to determine the sensitivity of a security's price to changes in interest rates. The longer a security's duration, the more sensitive it will be to changes in interest rates, which may increase the volatility of the security's value and may lead to losses. As a separate measure, there is no limit on the weighted average maturity of the Portfolio's fixed income portfolio.

The Portfolio may invest in securities denominated in foreign currencies and in U.S. dollar-denominated securities of foreign issuers, including securities and instruments that are economically tied to emerging market countries. The Portfolio will normally limit its foreign currency exposure (from non-U.S. dollar-denominated securities or currencies) to 40% of its total assets (this limitation does not apply to investment grade sovereign debt denominated in the local currency with less than 1 year remaining to maturity).

The portfolio managers intend to maintain an average weighted portfolio quality of BBB- or better, which is considered investment grade, whether composed of rated securities or unrated securities deemed by the portfolio managers to be of comparable quality. The Portfolio may invest in both investment grade securities and high yield securities ("junk bonds") subject to a maximum of 40% of its total assets in securities rated below investment grade by Standard & Poor's Global Ratings ("S&P"), Fitch, Inc. ("Fitch"), or Moody's Investors Service, Inc. ("Moody's") or, if unrated, determined by the Adviser or a sub-adviser to be of comparable quality. The below investment grade securities in which the Portfolio invests are generally rated at least CC by S&P or Fitch or at least Ca by Moody's or, if unrated, determined by the Adviser or a sub-adviser to be of comparable quality. The Portfolio may continue to hold securities that are downgraded below these ratings (or that default) subsequent to purchase.

The Portfolio does not normally invest in securities that are in default or have defaulted with respect to the payment of interest or repayment of principal, but may do so depending on market or other conditions. The Portfolio may have exposure to securities rated below CC or Ca, or to securities that are in default or have defaulted, through its investments in certain derivatives described below.

The Portfolio may invest, without limitation, in forwards and derivative instruments such as options, futures contracts, structured securities or swap agreements (including total return swaps, credit default swaps and interest rate swaps), and in mortgage- and asset-backed securities, subject to applicable law and any other restrictions described in the Portfolio's Prospectus or Statement of Additional Information. Derivatives may be used for various investment purposes, including to hedge portfolio risk, to gain exposure or to short individual securities, to earn income and enhance return, and to manage duration. The Portfolio's investments in derivatives may involve the use of leverage because the Portfolio is not required to invest the full market value of the contract upon entering into the contract but participates in gains and losses on the full contract price. The use of derivatives also may involve the use of leverage because the heightened price sensitivity of some derivatives to market changes may magnify the Portfolio's gain or loss. The Portfolio's investments in derivatives may require it to maintain a percentage of its assets in cash and cash equivalent instruments to serve as margin or collateral for the Portfolio's obligations under derivative transactions.

The Portfolio may enter into foreign currency exchange transactions to hedge against currency exposure in its portfolio. The Portfolio may enter into forward currency exchange contracts and other currency derivatives, such as swaps, options and futures, to shift its investment exposure from one currency into another. This may include shifting exposure from U.S. dollars to a foreign currency, or from one foreign currency to another foreign currency. This type of strategy, sometimes known as a "cross-hedge," will tend to reduce or eliminate exposure to the currency that is sold, and increase exposure to the currency

that is purchased, much as if the Portfolio had sold a security denominated in one currency and purchased an equivalent security denominated in another. Cross-hedges are intended to protect against losses resulting from a decline in the value of the hedged currency, but will cause the Portfolio to assume the risk of fluctuations in the value of the currency it purchases, and may also limit any potential gain that might result should the value of such hedged currency increase.

The Portfolio may purchase or sell securities on a when-issued, delayed delivery, or forward commitment basis. The Portfolio may seek to obtain market exposure to the securities in which it primarily invests by entering into a series of purchase and sale contracts (such as contracts for derivative instruments) or by using other investment techniques (such as buy backs or dollar rolls). The Portfolio may invest in privately placed and restricted securities (including 144A bonds), collateralized loan obligations, inflation-indexed bonds, convertible bonds, preferred securities, bank loans, and loan participations and assignments. The Portfolio may also invest in zero coupon and pay-in-kind securities. The Portfolio may engage in active and frequent trading to achieve its investment objective.

Notwithstanding the foregoing, the Portfolio may receive instruments prohibited or not contemplated herein through the conversion, exchange, reorganization, corporate action or bankruptcy of an otherwise permissible investment. The Portfolio may hold or dispose of these investments at the portfolio managers' discretion.

Principal Risks

An investment in the Portfolio is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The value of your investment may fall, sometimes sharply, and you could lose money by investing in the Portfolio. There can be no assurance that the Portfolio will achieve its investment objective.

The following risks can negatively affect the Portfolio's performance. The most significant risks as of the date of this Prospectus are presented first, followed by additional principal risks in alphabetical order.

Market Risk — The Portfolio is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect Portfolio performance. Securities markets also may experience long periods of decline in value. The value of a security can be more volatile than the market as a whole and can perform differently from the market as a whole. Any issuer of securities may perform poorly, causing the value of its securities to decline. Poor performance may be caused by a variety of factors, such as poor management decisions; reduced demand for the issuer's goods or services; competitive pressures; negative perception in the marketplace; loss of major customers; strategic initiatives such as mergers or acquisitions and the market response to any such initiatives; and the historical and prospective earnings of the issuer. The value of a security also may decline due to general market conditions, such as real or perceived adverse economic or political conditions, inflation rates and/or investor expectations concerning such rates, changes in interest rates, recessions, or adverse investor sentiment generally. During a general downturn in the securities markets, multiple asset classes may decline in value simultaneously. Even when securities markets perform well, there can be no assurance that the investments held by the Portfolio will increase in value along with the broader market. Changes in the financial condition of (or other event affecting) a single issuer can impact an individual sector or industry, or the securities markets as a whole. The value of a security also may decline due to factors that affect a particular sector or industry.

Geopolitical events, including acts of terrorism, tensions, war or other open conflicts between nations, or political or economic dysfunction within some nations that are global economic powers or major producers of oil, may lead to overall instability in world economies and markets generally and have led, and may in the future lead, to increased market volatility and may have adverse long-term effects. World markets, or those in a particular region, may all react in similar fashion to important economic, political or other developments. Events such as environmental and natural disasters or other catastrophes, public health crises (such as epidemics and pandemics), social unrest, and cybersecurity incidents, and governments' reactions (or failure to react) to such events, could cause uncertainty in the markets and may adversely affect the performance of the global economy. Impacts from climate change may include significant risks to global financial assets and economic growth. The extent and duration of such events and resulting market disruptions could be substantial and could magnify the impact of other risks to the Portfolio. The value and liquidity of the Portfolio's investments may be negatively affected by developments in other countries and regions, whether or not the Portfolio invests in securities of issuers located in or with significant exposure to the countries or regions directly affected.

Changes in government or central bank policies and political, diplomatic and other events within the United States and abroad could cause uncertainty in the markets, may affect investor and consumer confidence, and may adversely impact financial markets and the broader economy, perhaps suddenly and to a significant degree. High public debt in the United States and other countries creates ongoing systemic and market risks and policymaking uncertainty and may negatively affect economic conditions and the value of markets, sectors and companies in which the Portfolio invests.

In addition, markets and market participants are increasingly reliant on information data systems. Inaccurate data, software or other technology malfunctions, programming inaccuracies, unauthorized use or access, and similar circumstances may impair the performance of these systems and may have an adverse impact upon a single issuer, a group of issuers, or the market at large.

Interest Rate Risk — Changes in interest rates may affect the yield, liquidity and value of investments in income producing or debt securities. Changes in interest rates also may affect the value of other securities. When interest rates rise, the value of the Portfolio's debt securities generally declines. Conversely, when interest rates decline, the value of the Portfolio's debt securities generally rises. Typically, the longer the maturity (i.e., the term of a debt security) or duration (i.e., a measure of the sensitivity of a debt security to changes in market interest rates, based on the entire cash flow associated with the security) of a debt security, the greater the effect a change in interest rates could have on the security's price. Thus, the sensitivity of the Portfolio's debt securities to interest rate risk will increase the greater the duration of those securities. Changes in government or central bank monetary policy may have a substantial and immediate impact on interest rates, which could result in losses to the Portfolio.

Credit Risk — The Portfolio is subject to the risk that the issuer or guarantor of a fixed income security, or the counterparty to a transaction, is unable or unwilling, or is perceived as unable or unwilling, to make timely interest or principal payments or otherwise honor its obligations, or defaults completely, which may cause the Portfolio's holdings to lose value. The downgrade of a security's credit rating may decrease its value. Lower credit quality also may lead to greater volatility in the price of a security and may negatively affect a security's liquidity. The credit quality of a security can deteriorate suddenly and rapidly. The Portfolio may experience a significant or complete loss on a fixed income security or a transaction.

Mortgage-Related and Other Asset-Backed Securities Risk — Declines in the credit quality of and defaults by the issuers of mortgage-related and other asset-backed securities or instability in the markets for such securities may decrease the value of such securities, which could result in losses to the Portfolio, and may reduce the liquidity of such securities and make such securities more difficult to purchase or sell at an advantageous time and price. In addition, borrowers may default on the obligations that underlie mortgage-related and other asset-backed securities. The risk of defaults by borrowers generally is greater during times of rising interest rates and/or unemployment rates. The impairment (or loss) of the value of collateral or other assets underlying mortgage-related and other asset-backed securities will result in a reduction in the value of the securities. Certain collateral may be difficult to locate in the event of default, or may be lost, and recoveries of depreciated or damaged collateral may not fully cover payments due on such collateral. Asset-backed securities may not have the benefit of a security interest in collateral comparable to that of mortgage assets, resulting in additional credit risk.

Furthermore, mortgage-related and other asset-backed securities typically provide the issuer with the right to prepay the security prior to maturity. During periods of rising interest rates, the rate of prepayments tends to decrease because borrowers are less likely to prepay debt (such as mortgage debt or automobile loans). Slower than expected payments can extend the average lives of mortgage-related and other asset-backed securities, and this may "lock in" a below market interest rate and increase the security's duration and interest rate sensitivity, which may increase the volatility of the security's value and may lead to losses. During periods of falling interest rates, the rate of prepayments tends to increase because borrowers are more likely to pay off debt and refinance at the lower interest rates then available. Unscheduled prepayments shorten the average lives of mortgage-related and other asset-backed securities and may result in the Portfolio's having to reinvest the proceeds of the prepayments at lower interest rates, thereby reducing the Portfolio's income.

Investment Grade Securities Risk — Securities rated in the lower investment grade rating categories (e.g., BBB or Baa) are considered investment grade securities, but may have more risk than higher rated obligations because they are regarded as having only an adequate capacity to pay principal and interest, are considered to lack outstanding investment characteristics, and may possess certain speculative characteristics.

Non-Investment Grade Securities Risk — Bonds rated below BBB by Standard & Poor's Global Ratings or Fitch Ratings, Ltd., or below Baa by Moody's Investors Service, Inc. (or, if unrated, determined by the investment manager to be of comparable quality) are speculative in nature and are subject to additional risk factors such as increased possibility of default, illiquidity of the security, and changes in value based on changes in interest rates. Non-investment grade bonds, sometimes referred to as "junk bonds," are usually issued by companies without long track records of sales and earnings, or by those companies with questionable credit strength. The creditworthiness of issuers of non-investment grade debt securities may be more complex to analyze than that of issuers of investment grade debt securities, and reliance on credit ratings may present additional risks.

Foreign Securities Risk — Investments in foreign securities, including depositary receipts, involve risks in addition to those associated with investments in U.S. securities. Foreign markets may be less liquid, more volatile and subject to less government supervision and regulation than U.S. markets, and it may take more time to clear and settle trades involving foreign securities, which could negatively impact the Portfolio's investments and cause it to lose money. Security values also may be negatively affected by changes in the exchange rates between the U.S. dollar and foreign currencies. Differences between U.S. and foreign legal, political and economic

systems, regulatory regimes and market practices, as well as changes in international trading patterns, trade barriers and other protectionist trade policies (including those of the United States), governmental instability, acts of terrorism, war or other open conflicts, or other political, diplomatic or economic actions, also may adversely impact security values. Foreign securities are also subject to the risks associated with the potential imposition of economic or other sanctions against a particular foreign country, its nationals, businesses or industries. World markets, or those in a particular region, may all react in similar fashion to important economic, political or other developments. Events and evolving conditions in certain economies or markets may alter the risks associated with investments tied to countries or regions that historically were perceived as comparatively stable and make such investments riskier and more volatile. Regardless of where a company is organized or its stock is traded, its performance may be significantly affected by events in regions from which it derives its profits or in which it conducts significant operations.

Currency Risk — Investments that are denominated in or that provide exposure to foreign currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar. Any such decline may erode or reverse any potential gains from an investment in securities denominated in foreign currency or may widen existing loss. In the case of hedging positions, there is the risk that the U.S. dollar will decline in value relative to the currency being hedged. Currency rates may fluctuate significantly over short periods of time.

Emerging Markets Risk — The risks associated with investments in emerging market countries often are significant, and vary from jurisdiction to jurisdiction and company to company. Investments in emerging market countries are more susceptible to loss than investments in more developed foreign countries and may present market, credit, currency, liquidity, legal, political, technical and other risks different from, or greater than, the risks of investing in more developed foreign countries. Emerging market countries may be more likely to experience rapid and significant adverse developments in their political or economic structures, intervene in financial markets, restrict foreign investments, impose high withholding or other taxes on foreign investments, impose restrictive exchange control regulations, or nationalize or expropriate the assets of private companies, which may have negative impacts on transaction costs, market price, investment returns and the legal rights and remedies available to the Portfolio. In addition, the securities markets of emerging market countries generally are smaller, less liquid and more volatile than those of more developed foreign countries, and emerging market countries often have less uniformity in regulatory, accounting, auditing and financial reporting requirements or standards, which may impact the availability and quality of information about issuers, and less reliable clearance and settlement, registration and custodial procedures. Emerging market countries also may be subject to high inflation and rapid currency devaluations, and currency-hedging techniques may be unavailable in certain emerging market countries. In addition, some emerging market countries may be heavily dependent on international trade, which can materially affect their securities markets. Securities of issuers traded on foreign exchanges may be suspended. The likelihood of such suspensions may be higher for securities of issuers in emerging market countries than in countries with more developed markets.

European Economic Risk — The economies of European Union (“EU”) member countries and their trading partners, as well as the broader global economy, may be adversely affected by changes in the euro’s exchange rate, changes in EU or governmental regulations on trade, geopolitical and other events, including acts of terrorism, tensions, war or other open conflicts, and the threat of default or an actual default by an EU member country on its sovereign debt, which could negatively impact the Portfolio’s investments and cause it to lose money. Events in Europe may continue to impact the economies of every European country and their economic partners. The ongoing Russia-Ukraine conflict, the resulting responses by the United States and other countries, and the potential for wider conflict have had, and could continue to have, severe adverse effects on regional and global economies and could further increase volatility and uncertainty in the financial markets. In addition, uncertainties regarding the viability of the EU have impacted and may continue to impact regional and global markets. There are ongoing concerns regarding the economies of certain European countries and/or their sovereign debt following the United Kingdom’s withdrawal from the EU, commonly referred to as “Brexit”. Any further withdrawals from the EU could cause significant regional and global market disruption, which may negatively impact the Portfolio’s investments and cause it to lose money.

U.S. Government Securities — Although the Portfolio may hold securities that carry U.S. government guarantees, these guarantees do not extend to shares of the Portfolio itself and do not guarantee the market prices of the securities. Securities issued by the U.S. Treasury or other agencies and instrumentalities of the U.S. government may decline in value as a result of, among other things, changes in interest rates, political events in the United States, international developments, including strained relations with foreign countries, and changes in the credit rating of, or investor perceptions regarding the creditworthiness of, the U.S. government. Furthermore, not all securities issued by the U.S. government and its agencies and instrumentalities are backed by the full faith and credit of the U.S. Treasury. Securities not backed by the full faith and credit of the U.S. Treasury involve greater credit risk than investments in other types of U.S. government securities.

Portfolio Management Risk — The Portfolio is subject to the risk that strategies used by an investment manager and its securities selections fail to produce the intended results. An investment manager’s judgments or decisions about the quality, relative yield or value of, or market trends affecting, a particular security or issuer, industry, sector, region or market segment, or about the economy

or interest rates, may be incorrect or otherwise may not produce the intended results, which may result in losses to the Portfolio. In addition, many processes used in Portfolio management, including security selection, rely, in whole or in part, on the use of various technologies. The Portfolio may suffer losses if there are imperfections, errors or limitations in the quantitative, analytic or other tools, resources, information and data used, or the analyses employed or relied on, by an investment manager, or if such tools, resources, information or data are used incorrectly, fail to produce the desired results, or otherwise do not work as intended. There can be no assurance that the use of these technologies will result in effective investment decisions for the Portfolio.

Cash Management Risk — Upon entering into certain derivatives contracts, such as futures contracts, and to maintain open positions in certain derivatives contracts, the Portfolio may be required to post collateral for the contract, the amount of which may vary. In addition, the Portfolio may maintain cash and cash equivalent positions as part of the Portfolio's strategy in order to take advantage of investment opportunities as they arise, to manage the Portfolio's market exposure, and for other portfolio management purposes. As such, the Portfolio may maintain cash balances, which may be significant, with counterparties such as the Trust's custodian or its affiliates. Maintaining larger cash and cash equivalent positions could negatively affect the Portfolio's performance due to missed investment opportunities and may also subject the Portfolio to additional risks, such as increased credit risk with respect to the custodian bank holding the assets and the risk that a counterparty may be unable or unwilling, or perceived as unable or unwilling, to honor its obligations.

Collateralized Loan Obligations Risk — Investments in collateralized loan obligations ("CLOs") involve many of the same risks associated with investments in debt securities and asset-backed securities, including interest rate risk, credit risk, liquidity risk, prepayment and extension risk, and valuation risk. The risks of an investment in a CLO also depend largely on the quality and type of the collateral and the class or "tranche" of the CLO in which the Portfolio invests. Normally, CLOs are privately offered and sold, and thus are not registered under the securities laws. As a result, investments in CLOs may be characterized by the Portfolio as illiquid securities; however, an active dealer market, or other relevant measures of liquidity, may exist for CLOs allowing a CLO potentially to be deemed liquid under the Portfolio's liquidity policies. Additionally, CLOs carry risks, including, but not limited to: (a) the possibility that distributions from collateral securities will not be adequate to make interest or other payments; (b) the risk that the collateral securities may decline in value or quality or be downgraded or go into default, particularly during periods of economic downturn; (c) the possibility that the Portfolio may invest in CLOs that are subordinate to other classes; (d) the risk that the manager of the CLOs may perform poorly; and (e) the risk that the complex structure of CLOs may produce disputes with the issuer or unexpected investment results. CLOs also can be difficult to value and may be highly leveraged (which could make them highly volatile), and the use of CLOs may result in losses to the Portfolio.

Convertible Securities Risk — A convertible security is a form of hybrid security; that is, a security with both debt and equity characteristics. The value of a convertible security fluctuates in relation to changes in interest rates and the credit quality of the issuer and also fluctuates in relation to changes in the price of the underlying common stock. A convertible security may be subject to redemption at the option of the issuer at a price established in the convertible security's governing instrument, which may be less than the current market price of the security. If a convertible security held by the Portfolio is called for redemption, the Portfolio will be required to permit the issuer to redeem the security, convert it into the underlying common stock, or sell it to a third party. Convertible securities are subject to equity risk, interest rate risk, and credit risk and are often lower-quality securities. Lower quality may lead to greater volatility in the price of a security and may negatively affect a security's liquidity. Since it derives a portion of its value from the common stock into which it may be converted, a convertible security is also subject to the same types of market and issuer-specific risks that apply to the underlying common stock.

Derivatives Risk — The Portfolio's investments in derivatives may rise or fall in value more rapidly than other investments and may reduce the Portfolio's returns and increase the volatility of the Portfolio's net asset value. Investing in derivatives involves investment techniques and risk analyses different from, and risks in some respects greater than, those associated with investing in more traditional investments, such as stocks and bonds. Derivatives may be leveraged such that a small investment can have a significant impact on the Portfolio's exposure to stock market values, interest rates, or other investments. As a result, a relatively small price movement in a derivatives contract may cause an immediate and substantial loss, and the Portfolio could lose more than the amount it invested. Some derivatives can have the potential for unlimited losses. In addition, it may be difficult or impossible for the Portfolio to purchase or sell certain derivatives in sufficient amounts to achieve the desired level of exposure, or to terminate or offset existing arrangements, which may result in a loss or may be costly to the Portfolio. Some derivatives are more sensitive to market price fluctuations and to interest rate changes than other investments. Derivatives may not behave as anticipated by the Portfolio, and derivatives strategies that are successful under certain market conditions may be less successful or unsuccessful under other market conditions. The Portfolio also may be exposed to losses if the counterparty in the transaction is unable or unwilling to fulfill its contractual obligation. In certain cases, the Portfolio may be hindered or delayed in exercising remedies against or closing out derivatives with a counterparty, resulting in additional losses. Derivatives also may be subject to the risk of mispricing or improper valuation, and valuation may be more difficult in times of market turmoil. Changes to the regulation of derivatives markets and mutual funds' use of derivatives may impact the

Portfolio's ability to maintain its investments in derivatives, make derivatives more costly, limit their availability, adversely affect their value or performance, or otherwise disrupt markets.

Dollar Roll and Sale-Buyback Transactions Risk — Dollar roll and sale-buyback transactions may increase the Portfolio's volatility and may be viewed as a form of leverage. There is also a risk that the counterparty will be unable or unwilling to complete the transaction as scheduled, which may result in losses to the Portfolio.

Futures Contract Risk — The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the instruments held by the Portfolio and the price of the futures contract; (b) liquidity risks, including the possible absence of a liquid secondary market for a futures contract and the resulting inability to close a futures contract when desired; (c) losses (potentially unlimited) caused by unanticipated market movements; (d) an investment manager's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that a counterparty, clearing member or clearinghouse will default in the performance of its obligations; (f) if the Portfolio has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Portfolio may have to sell securities at a time when it may be disadvantageous to do so; and (g) transaction costs associated with investments in futures contracts may be significant, which could cause or increase losses or reduce gains. Futures contracts are also subject to the same risks as the underlying investments to which they provide exposure. In addition, futures contracts may subject the Portfolio to leveraging risk.

Hedging Risk — If the Portfolio takes a hedging position (such as long or short positions) in a particular currency, security, or bond market, it will lose money if the currency, security, or bond market appreciates in value, or an expected credit event fails to occur. Any efforts at buying or selling currencies could result in significant losses for the Portfolio.

Inflation-Indexed Bonds Risk — Inflation-indexed bonds are fixed income securities whose principal value is periodically adjusted according to inflation. The value of inflation-indexed bonds is expected to change in response to changes in real interest rates. Real interest rates represent nominal (stated) interest rates reduced by the expected impact of inflation. In general, inflation-indexed bonds, including Treasury inflation-indexed securities, decline in value when real interest rates rise and rise in value when real interest rates decline. In certain interest rate environments, such as when real interest rates are rising faster than nominal interest rates, inflation-indexed bonds may experience greater losses than other fixed income securities with similar durations. Interest payments on inflation-indexed debt securities can be unpredictable and may vary as the principal and/or interest is adjusted for inflation. In periods of deflation, the Portfolio may have no income at all from such investments.

Leveraging Risk — When the Portfolio leverages its holdings, the value of an investment in the Portfolio will be more volatile and all other risks will tend to be compounded. Investments that create leverage can result in losses to the Portfolio that exceed the amount originally invested and may accelerate the rate of losses (some of which may be sudden or substantial). For certain investments that create leverage, relatively small market fluctuations can result in large changes in the value of such investments. There can be no assurance that the Portfolio's use of any leverage will be successful.

Liquidity Risk — From time to time, there may be little or no active trading market for a particular investment in which the Portfolio may invest or is invested. In such a market, the value of such an investment and the Portfolio's share price may fall dramatically. Illiquid investments may be difficult or impossible to sell or purchase at an advantageous time or price or in sufficient amounts to achieve the Portfolio's desired level of exposure. To meet redemption requests during periods of illiquidity, the Portfolio may be forced to dispose of investments at unfavorable times or prices and/or under unfavorable conditions, which may result in losses or may be costly to the Portfolio. Investments that are illiquid or that trade in lower volumes may be more difficult to value. The Portfolio also may not receive its proceeds from the sale of certain investments for an extended period of time. Certain investments that were liquid when purchased may later become illiquid, sometimes abruptly, particularly in times of overall economic distress or adverse investor perception. An inability to sell a portfolio position can adversely affect the Portfolio's value or prevent the Portfolio from being able to take advantage of other investment opportunities. During periods of market stress, an investment or even an entire market segment may become illiquid, sometimes abruptly, which can adversely affect the Portfolio's ability to limit losses. In addition, a reduction in the ability or willingness of dealers and other institutional investors to make a market in certain securities may result in decreased liquidity in certain markets.

Loan Risk — A bank loan represents an interest in a loan or other direct indebtedness that entitles the acquirer of such interest to payments of interest, principal and/or other amounts due under the structure of the loan. Loan interests are subject to liquidity risk, prepayment risk, extension risk, the risk of subordination to other creditors, restrictions on resale, and the lack of a regular trading market and publicly available information. Loan interests may be difficult to value and may have extended trade settlement periods. As a result, the proceeds from the sale of a loan may not be available to make additional investments or to meet redemption obligations until potentially a substantial period after the sale of the loan. The extended trade settlement periods could force the Portfolio to liquidate other securities to meet redemptions and may present a risk that the Portfolio may incur losses in order to timely honor redemptions. There is a risk that the value of any collateral securing a loan in which the Portfolio has an interest may decline and

that the collateral may not be sufficient to cover the amount owed on the loan. In the event the borrower defaults, the Portfolio's access to the collateral may be limited or delayed by bankruptcy or other insolvency laws. Loans may not be considered "securities," and purchasers, such as the Portfolio, therefore may not have the benefit of the anti-fraud protections of the federal securities laws. To the extent that the Portfolio invests in loan participations and assignments, it is subject to the risk that the financial institution acting as agent for all interests in a loan might fail financially. It is also possible that the Portfolio could be held liable, or may be called upon to fulfill other obligations, as a co-lender.

Multiple Sub-Adviser Risk — To a significant extent, the Portfolio's performance will depend on the success of the Adviser in allocating the Portfolio's assets to Sub-Advisers and its selection and oversight of the Sub-Advisers. The Sub-Advisers' investment strategies may not work together as planned, which could adversely affect the Portfolio's performance. Because each Sub-Adviser directs the trading for its own portion of the Portfolio, and does not aggregate its transactions with those of the other Sub-Adviser, the Portfolio may incur higher brokerage costs than would be the case if a single Sub-Adviser were managing the entire Portfolio. In addition, while the Adviser seeks to allocate the Portfolio's assets among the Portfolio's Sub-Advisers in a manner that it believes is consistent with achieving the Portfolio's investment objective(s), the Adviser is subject to conflicts of interest in allocating the Portfolio's assets among Sub-Advisers, including affiliated Sub-Advisers, because the Adviser pays different fees to the Sub-Advisers and due to other factors that could impact the Adviser's or its affiliates' revenues and profits.

Portfolio Turnover Risk — High portfolio turnover (generally, turnover in excess of 100% in any given fiscal year) may result in increased transaction costs to the Portfolio, which may result in higher fund expenses and lower total return.

Preferred Stock Risk — Preferred stock is subject to many of the risks associated with debt securities, including interest rate risk. Unlike interest payments on debt securities, dividends on preferred stock are generally payable at the discretion of the issuer's board of directors. Preferred shareholders may have certain rights if dividends are not paid but generally have no legal recourse against the issuer. Shareholders may suffer a loss of value if dividends are not paid. In certain situations an issuer may call or redeem its preferred stock or convert it to common stock. The market prices of preferred stocks are generally more sensitive to actual or perceived changes in the issuer's financial condition or prospects than are the prices of debt securities.

Prepayment Risk and Extension Risk — Prepayment risk is the risk that the issuer of a security held by the Portfolio may pay off principal more quickly than originally anticipated. This may occur when interest rates fall. The Portfolio may have to reinvest the proceeds in an investment offering a lower yield, may not benefit from any increase in value that might otherwise result from declining interest rates and may lose any premium it paid to acquire the security. Extension risk is the risk that the issuer of a security held by the Portfolio may pay off principal more slowly than originally anticipated. This may occur when interest rates rise. The Portfolio may be prevented from reinvesting the proceeds it would have received at a given time in an investment offering a higher yield.

Privately Placed and Other Restricted Securities Risk — Restricted securities, which include privately placed securities, are securities that cannot be offered for public resale unless registered under the applicable securities laws or that have a contractual restriction that prohibits or limits their resale. Before they are registered, such securities may be sold only in a privately negotiated transaction or pursuant to an exemption from registration. Difficulty in selling securities may result in a loss or be costly to the Portfolio. Rule 144A is designed to facilitate efficient trading among institutional investors by permitting the sale of certain unregistered securities to qualified institutional buyers. To the extent restricted securities held by the Portfolio qualify under Rule 144A and an institutional market develops for those securities, the Portfolio likely will be able to dispose of the securities without registering them. To the extent that institutional buyers become, for a time, uninterested in purchasing these securities, investing in Rule 144A securities could increase the level of the Portfolio's illiquidity. The Adviser or Sub-Adviser may determine that certain securities qualified for trading under Rule 144A are liquid. Where registration of a security is required, the Portfolio may be obligated to pay all or part of the registration expenses, and a considerable period may elapse between the time the Portfolio desires to sell (and therefore decides to seek registration of) the security, and the time the Portfolio may be permitted to sell the security under an effective registration statement. If, during such a period, adverse market conditions were to develop, the Portfolio might obtain a less favorable price than prevailed when it desired to sell. The risk that securities may not be sold for the price at which the Portfolio is carrying them is greater with respect to restricted securities than it is with respect to registered securities. The illiquidity of the market, as well as the lack of publicly available information regarding these securities, also may make it difficult to determine a fair value for certain securities for purposes of computing the Portfolio's net asset value.

Redemption Risk — The Portfolio may experience periods of heavy redemptions that could cause the Portfolio to sell assets at inopportune times or at a loss or depressed value. Redemption risk is heightened during periods of declining or illiquid markets. Heavy redemptions could hurt the Portfolio's performance.

Market developments and other factors, including a general rise in interest rates, have the potential to cause investors to move out of fixed income securities on a large scale, which may increase redemptions from mutual funds that hold large amounts of fixed income securities. The market-making capacity of dealers has been reduced in recent years, in part as a result of structural changes,

such as fewer proprietary trading desks at broker-dealers and increased regulatory capital requirements. Increased redemptions from mutual funds that hold large amounts of fixed income securities, coupled with a reduction in the ability or willingness of dealers and other institutional investors to buy or hold fixed income securities, may result in decreased liquidity and increased volatility in the fixed income markets.

Sector Risk — From time to time, based on market or economic conditions, the Portfolio may have significant positions in one or more sectors of the market. To the extent the Portfolio invests more heavily in particular sectors, its performance will be especially sensitive to developments that significantly affect those sectors. Individual sectors may be more volatile, and may perform differently, than the broader market. The industries that constitute a sector may all react in the same way to economic, political, regulatory or other events.

Variable and Floating Rate Securities Risk — The market prices of securities with variable and floating interest rates are generally less sensitive to interest rate changes than are the market prices of securities with fixed interest rates. Variable and floating rate securities may decline in value if market interest rates or interest rates paid by such securities do not move as expected. Conversely, variable and floating rate securities will not generally rise in value if market interest rates decline. Certain types of floating rate securities may be subject to greater liquidity risk than other debt securities.

When-Issued and Delayed Delivery Securities and Forward Commitments Risk — When-issued and delayed delivery securities and forward commitments involve the risk that the security the Portfolio commits to purchase will decline in value prior to its delivery. This risk is in addition to the risk that the Portfolio's other assets will decline in value. Therefore, these transactions can have a leverage-like effect on the Portfolio and increase the Portfolio's overall investment exposure. There also is the risk that the security will not be issued or that the other party to the transaction will fail to complete the sale or purchase of the security. If this occurs, the Portfolio may lose the opportunity to purchase or sell the security at the agreed upon price and may forgo any gain in the security's price.

Zero Coupon and Pay-in-Kind Securities Risk — Zero coupon and pay-in-kind securities are debt securities that do not make periodic cash interest payments. Zero coupon securities are issued at a significant discount from their face value. Zero coupon and pay-in-kind securities tend to be subject to greater fluctuations in market value in response to changing interest rates than securities of comparable maturities that pay interest periodically and in cash.

Risk/Return Bar Chart and Table

The bar chart and table below provide some indication of the risks of investing in the Portfolio by showing changes in the Portfolio's performance from year to year and by showing how the Portfolio's average annual total returns for the past one, five and ten years through December 31, 2023, compared to the returns of a broad-based securities market index. Past performance is not an indication of future performance.

For periods prior to November 13, 2023, the performance shown below is that of the Portfolio's predecessor, which was managed by the Adviser and had a substantially identical investment objective, policies and strategies as the Portfolio.

Effective May 1, 2020, the Portfolio's predecessor was restructured from a fund-of-funds to a fund that invests directly in securities and other instruments and is actively managed by multiple sub-advisers. If the Portfolio had historically been managed using its current investment strategies and policies, the performance of the Portfolio would have been different.

From April 18, 2014 through April 30, 2020, the Portfolio's predecessor was managed by the Adviser as a fund-of-funds and pursued its investment objective through investments in underlying proprietary and unaffiliated mutual funds and exchange-traded funds, which incurred their own operating costs and expenses, including management fees payable to their investment advisers. The performance as a fund-of-funds reflected the impact of these operating costs and expenses. Prior to April 18, 2014, the Portfolio's predecessor invested directly in securities and other instruments, had different investment policies and strategies, was managed by multiple sub-advisers and, under normal circumstances, approximately 50% of its net assets were actively managed and approximately 50% of its net assets were managed to track the performance (before fees and expenses) of a particular index.

The performance results do not reflect any Contract-related fees and expenses, which would reduce the performance results.

Calendar Year Annual Total Returns — Class IB

Average Annual Total Returns

	One Year	Five Years	Ten Years
EQ/Core Plus Bond Portfolio - Class IA	4.50%	1.87%	1.59%
EQ/Core Plus Bond Portfolio - Class IB	4.51%	1.94%	1.60%
EQ/Core Plus Bond Portfolio - Class K	5.03%	2.17%	1.89%
Bloomberg U.S. Aggregate Bond Index (reflects no deduction for fees, expenses, or taxes)	5.53%	1.10%	1.81%

WHO MANAGES THE PORTFOLIO

Investment Adviser: Equitable Investment Management Group, LLC ("EIM" or the "Adviser")

Portfolio Managers: The members of the team that are jointly and primarily responsible for the selection, monitoring and oversight of the Portfolio's Sub-Advisers are:

Name	Title	Date Began Managing the Portfolio
Kenneth T. Kozlowski, CFP®, CLU, ChFC	Executive Vice President and Chief Investment Officer of EIM	May 2011
Alwi Chan, CFA®	Senior Vice President and Deputy Chief Investment Officer of EIM	February 2010

Sub-Adviser: AXA Investment Managers US Inc. ("AXA IM" or a "Sub-Adviser")

Portfolio Managers: The members of the team that are jointly and primarily responsible for the securities selection, research and trading for AXA IM's portion of the Portfolio are:

Name	Title	Date Began Managing the Portfolio
Michael Graham, CFA®	Head of U.S. High Yield and Senior U.S. High Yield Portfolio Manager at AXA IM	August 2021
Robert Houle, CFA®	Senior U.S. High Yield Portfolio Manager at AXA IM	May 2020

Sub-Adviser: Brandywine Global Investment Management, LLC (“Brandywine Global” or a “Sub-Adviser”)

Portfolio Managers: The members of the team that are jointly and primarily responsible for the securities selection, research and trading for Brandywine Global’s portion of the Portfolio are:

Name	Title	Date Began Managing the Portfolio
Anujeet Sareen, CFA [®]	Portfolio Manager of Brandywine Global	May 2020
Brian Kloss	Portfolio Manager of Brandywine Global	May 2020
Tracy Chen, CFA [®]	Portfolio Manager of Brandywine Global	May 2020

Sub-Adviser: Loomis, Sayles & Company, L.P. (“Loomis Sayles” or a “Sub-Adviser”)

Portfolio Managers: The members of the team that are jointly and primarily responsible for the securities selection, research and trading for Loomis Sayles’ portion of the Portfolio (or a portion thereof) are:

Name	Title	Date Began Managing the Portfolio
Christopher T. Harms	Portfolio Manager of Loomis Sayles	May 2020
Clifton V. Rowe, CFA [®]	Portfolio Manager of Loomis Sayles	May 2020
Daniel Conklin, CFA [®]	Portfolio Manager of Loomis Sayles	May 2020
Ian Anderson	Portfolio Manager of Loomis Sayles	July 2023
Barath W. Sankaran, CFA [®]	Portfolio Manager of Loomis Sayles	July 2023

The Adviser is responsible for overseeing Sub-Advisers and recommending their hiring, termination and replacement to the Board of Trustees. The Adviser has been granted relief by the Securities and Exchange Commission to hire, terminate and replace Sub-Advisers for the Portfolio and enter into and amend sub-advisory agreements on behalf of the Portfolio subject to the approval of the Board of Trustees and without obtaining shareholder approval. The Adviser may not enter into a sub-advisory agreement on behalf of the Portfolio with an “affiliated person” of the Adviser unless the sub-advisory agreement is approved by the Portfolio’s shareholders. The relief does not extend to any increase in the advisory fee paid by the Portfolio to the Adviser; any such increase would be subject to shareholder approval.

PURCHASE AND REDEMPTION OF PORTFOLIO SHARES

The Portfolio’s shares are currently sold only to insurance company separate accounts in connection with Contracts issued by Equitable Financial Life Insurance Company (“Equitable Financial”) or other affiliated or unaffiliated insurance companies and to The Equitable 401(k) Plan. Shares also may be sold to other portfolios managed by EIM that currently sell their shares to such accounts and to other investors eligible under applicable federal income tax regulations. Class K shares may be sold only to other portfolios of the Trust and certain group annuity plans.

The Portfolio does not have minimum initial or subsequent investment requirements. Shares of the Portfolio are redeemable on any business day (which typically is any day the New York Stock Exchange is open) upon receipt of a request. All redemption requests will be processed and payment with respect thereto will normally be made within seven days after tender. Please refer to your Contract prospectus for more information on purchasing and redeeming Portfolio shares.

TAX INFORMATION

The Portfolio’s shareholders are (or may include) insurance company separate accounts and other investors eligible under applicable federal income tax regulations. Distributions made by the Portfolio to such an account, and exchanges and redemptions of Portfolio shares made by such an account, ordinarily do not cause the holders of underlying Contracts to recognize income or gain for federal income tax purposes at the time of the distributions, exchanges or redemptions; the holders generally are taxed only on amounts they withdraw from their Contract. See the prospectus for your Contract for further tax information.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

The Portfolio is not sold directly to the general public but instead is offered as an underlying investment option for Contracts and to other eligible investors. The Portfolio and the Adviser and its affiliates may make payments to sponsoring insurance companies (and their affiliates) or other financial intermediaries for distribution and/or other services. These payments may create a conflict of interest by influencing an insurance company or other financial intermediary and your financial adviser to recommend the Portfolio over another investment or by influencing an insurance company to include the Portfolio as an underlying investment option in the Contract. The prospectus (or other offering document) for your Contract may contain additional information about these payments. Ask your financial adviser or visit your financial intermediary's website for more information.

EQ/Money Market Portfolio — Class IA, Class IB and Class K Shares

Investment Objective: Seeks to obtain a high level of current income, preserve its assets and maintain liquidity.

FEES AND EXPENSES OF THE PORTFOLIO

The following table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Portfolio. The table below does not reflect any fees and expenses associated with variable life insurance contracts and variable annuity certificates and contracts ("Contracts"), which would increase overall fees and expenses. See the Contract prospectus for a description of those fees and expenses.

Shareholder Fees

(fees paid directly from your investment)

Not applicable.

Annual Portfolio Operating Expenses

(expenses that you pay each year as a percentage of the value of your investment)

EQ/Money Market Portfolio	Class IA Shares	Class IB Shares	Class K Shares
Management Fee	0.32%	0.32%	0.32%
Distribution and/or Service Fees (12b-1 fees)	0.25%	0.25%	0.00%
Other Expenses	0.12%	0.12%	0.12% ¹
Total Annual Portfolio Operating Expenses	0.69%	0.69%	0.44%

¹ Based on estimated amounts for the current fiscal year.

Example

This Example is intended to help you compare the cost of investing in the Portfolio with the cost of investing in other portfolios. The Example assumes that you invest \$10,000 in the Portfolio for the periods indicated, that your investment has a 5% return each year, and that the Portfolio's operating expenses remain the same. This Example does not reflect any Contract-related fees and expenses including redemption fees (if any) at the Contract level. If such fees and expenses were reflected, the total expenses would be higher. Although your actual costs may be higher or lower, based on these assumptions, whether you redeem or hold your shares, your costs would be:

	1 Year	3 Years	5 Years	10 Years
Class IA Shares	\$70	\$221	\$384	\$859
Class IB Shares	\$70	\$221	\$384	\$859
Class K Shares	\$45	\$141	\$246	\$555

INVESTMENTS, RISKS, AND PERFORMANCE

Principal Investment Strategy

The Portfolio invests 99.5% or more of its total assets in:

- debt securities issued or guaranteed as to principal or interest by the U.S. government, or by U.S. government agencies or instrumentalities;
- repurchase agreements that are collateralized fully by cash items or U.S. Treasury and U.S. government securities; and
- cash.

The Portfolio invests only in U.S. dollar-denominated securities and in instruments with a remaining maturity of 397 calendar days or less at the time of investment. Debt securities issued or guaranteed as to principal or interest by the U.S. government, or by U.S. government agencies or instrumentalities, may include, among others, direct obligations of the U.S. Treasury (such as Treasury bills, notes or bonds), obligations issued or guaranteed as to principal and interest (but not as to market value) by the U.S. government, its agencies or its instrumentalities, and mortgage-backed securities issued or guaranteed by government agencies or government-sponsored enterprises.

A repurchase agreement is a transaction in which the Portfolio purchases securities or other obligations from a bank or securities dealer (or its affiliate) and simultaneously commits to resell them to a counterparty at an agreed-upon date or upon demand and at a price reflecting a market rate of interest unrelated to the coupon rate or maturity of the purchased obligations. The difference between the original purchase price and the repurchase price is normally based on prevailing short-term interest rates. Under a repurchase agreement, the seller is required to furnish collateral (i.e., U.S. Treasury or U.S. government securities) at least equal in value or market price to the amount of the seller's repurchase obligation. In evaluating whether to enter into a repurchase agreement, the Adviser and Sub-Adviser will carefully consider the creditworthiness of the seller.

As prevailing market conditions and the economic environment warrant, and at the discretion of the Adviser and Sub-Adviser, a percentage of the Portfolio's total assets may be held in cash. During such periods, cash assets will be held in the Portfolio's custody account. Without limitation, such a strategy may be deemed advisable during periods where the interest rate on newly-issued U.S. Treasury securities is extremely low or where no interest rate is paid at all, or when Treasuries are in short supply, or due to a dislocation in the Treasury or broader fixed income markets.

The Portfolio maintains a dollar-weighted average portfolio maturity of 60 days or less, a dollar-weighted average life to maturity of 120 days or less, and uses the amortized cost method of valuation to seek to maintain a stable \$1.00 net asset value ("NAV") per share price.

The Adviser or Sub-Adviser may, in its sole discretion, maintain a temporary defensive position with respect to the Portfolio. Although not required to do so, as a temporary defensive measure, the Adviser may waive or cause to be waived fees owed by the Portfolio, in attempting to maintain a stable \$1.00 NAV per share.

The Portfolio intends to qualify as a "government money market fund," as such term is defined in or interpreted under Rule 2a-7 under the Investment Company Act of 1940, as amended. "Government money market funds" are exempt from rules that require money market funds to impose a fee on fund redemptions (liquidity fee). While the Portfolio's Board of Trustees may elect to impose a discretionary liquidity fee upon the redemption of Portfolio shares in the future, the Board of Trustees has not elected to do so at this time.

Principal Risks

You could lose money by investing in the Portfolio. Although the Portfolio seeks to preserve the value of your investment at \$1.00 per share, it cannot guarantee it will do so. An investment in the Portfolio is not a bank account and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The Portfolio's investment adviser and its affiliates are not required to reimburse the Portfolio for losses, and you should not expect that the investment adviser or its affiliates will provide financial support to the Portfolio at any time, including during periods of market stress. The following risks can negatively affect the Portfolio's performance. The most significant risks as of the date of this Prospectus are presented first, followed by additional principal risks in alphabetical order.

Money Market Risk — Although a money market fund is designed to be a relatively low risk investment, it is not free of risk. Despite the short maturities and high credit quality of a money market fund's investments, increases in interest rates and deteriorations in the credit quality of the instruments the money market fund has purchased may reduce the money market fund's yield and can cause the price of a money market security to decrease. In addition, a money market fund is subject to the risk that the value of an investment may be eroded over time by inflation. As a money market fund, the Portfolio is subject to specific rules that affect the manner in which the Portfolio and other money market funds are structured and operated and may impact the Portfolio's expenses, operations, returns and liquidity.

Net Asset Value Risk — Although the Portfolio seeks to do so, it may not be able to maintain a stable \$1.00 NAV per share at all times. The Portfolio's shareholders should not rely on or expect the Portfolio's investment adviser or its affiliates to make a capital infusion, enter into a capital support agreement, or take other actions to help the Portfolio maintain a stable \$1.00 share price at any time, including during periods of market stress. In the event that any money market fund fails to maintain a stable net asset value (or if there is a perceived threat that a money market fund is likely to fail to maintain a stable net asset value), money market funds in general, including the Portfolio, could face increased redemption pressures, which could jeopardize the stability of their net asset values. Certain other money market funds have in the past failed to maintain stable net asset values, and there can be no assurance that such failures and resulting redemption pressures will not occur in the future. A low- or negative-interest rate environment may prevent the Portfolio from providing a positive yield, cause the Portfolio to pay Portfolio expenses out of Portfolio assets, or impair the Portfolio's ability to maintain a stable \$1.00 NAV per share. In addition, the purchase and redemption activity of a few large investors in the Portfolio may have a significant adverse effect on other shareholders.

U.S. Government Securities Risk — Although the Portfolio may hold securities that carry U.S. government guarantees, these guarantees do not extend to shares of the Portfolio itself and do not guarantee the market prices of the securities. Securities issued by the U.S. Treasury or other agencies and instrumentalities of the U.S. government may decline in value as a result of, among other things, changes in interest rates, political events in the United States, international developments, including strained relations with foreign countries, and changes in the credit rating of, or investor perceptions regarding the creditworthiness of, the U.S. government. Furthermore, not all securities issued by the U.S. government and its agencies and instrumentalities are backed by the full faith and credit of the U.S. Treasury. Securities not backed by the full faith and credit of the U.S. Treasury involve greater credit risk than investments in other types of U.S. government securities.

Interest Rate Risk — Changes in interest rates may affect the yield, liquidity and value of investments in income producing or debt securities. Changes in interest rates also may affect the value of other securities. When interest rates rise, the value of the Portfolio's debt securities generally declines. Conversely, when interest rates decline, the value of the Portfolio's debt securities generally rises. Typically, the longer the maturity (i.e., the term of a debt security) or duration (i.e., a measure of the sensitivity of a debt security to changes in market interest rates, based on the entire cash flow associated with the security) of a debt security, the greater the effect a change in interest rates could have on the security's price. Thus, the sensitivity of the Portfolio's debt securities to interest rate risk will increase the greater the duration of those securities. Changes in government or central bank monetary policy may have a substantial and immediate impact on interest rates, which could result in losses to the Portfolio. The Portfolio's yield will vary; it is not fixed for a specific period. There is no assurance that the Portfolio will provide a certain level of income or that the Portfolio's yield will remain positive.

Credit Risk — The Portfolio is subject to the risk that the issuer or guarantor of a fixed income security, or the counterparty to a repurchase agreement or other transaction, is unable or unwilling, or is perceived as unable or unwilling, to make timely interest or principal payments or otherwise honor its obligations, or defaults completely, which may cause the Portfolio's holdings to lose value. The downgrade of a security's credit rating may decrease its value. The Portfolio may experience a significant or complete loss on a fixed income security or a transaction.

Market Risk — The Portfolio is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect Portfolio performance. Securities markets also may experience long periods of decline in value. The value of a security can be more volatile than the market as a whole and can perform differently from the market as a whole. Any issuer of securities may perform poorly, causing the value of its securities to decline. Poor performance may be caused by a variety of factors, such as poor management decisions; reduced demand for the issuer's goods or services; competitive pressures; negative perception in the marketplace; loss of major customers; strategic initiatives such as mergers or acquisitions and the market response to any such initiatives; and the historical and prospective earnings of the issuer. The value of a security also may decline due to general market conditions, such as real or perceived adverse economic or political conditions, inflation rates and/or investor expectations concerning such rates, changes in interest rates, recessions, or adverse investor sentiment generally. During a general downturn in the securities markets, multiple asset classes may decline in value simultaneously. Even when securities markets perform well, there can be no assurance that the investments held by the Portfolio will increase in value along with the broader market. Changes in the financial condition of (or other event affecting) a single issuer can impact an individual sector or industry, or the securities markets as a whole. The value of a security also may decline due to factors that affect a particular sector or industry.

Geopolitical events, including acts of terrorism, tensions, war or other open conflicts between nations, or political or economic dysfunction within some nations that are global economic powers or major producers of oil, may lead to overall instability in world economies and markets generally and have led, and may in the future lead, to increased market volatility and may have adverse long-term effects. World markets, or those in a particular region, may all react in similar fashion to important economic, political or other developments. Events such as environmental and natural disasters or other catastrophes, public health crises (such as epidemics and pandemics), social unrest, and cybersecurity incidents, and governments' reactions (or failure to react) to such events, could cause uncertainty in the markets and may adversely affect the performance of the global economy. Impacts from climate change may include significant risks to global financial assets and economic growth. The extent and duration of such events and resulting market disruptions could be substantial and could magnify the impact of other risks to the Portfolio. The value and liquidity of the Portfolio's investments may be negatively affected by developments in other countries and regions, whether or not the Portfolio invests in securities of issuers located in or with significant exposure to the countries or regions directly affected.

Changes in government or central bank policies and political, diplomatic and other events within the United States and abroad could cause uncertainty in the markets, may affect investor and consumer confidence, and may adversely impact financial markets and the broader economy, perhaps suddenly and to a significant degree. High public debt in the United States and other countries creates ongoing systemic and market risks and policymaking uncertainty and may negatively affect economic conditions and the value of markets, sectors and companies in which the Portfolio invests.

In addition, markets and market participants are increasingly reliant on information data systems. Inaccurate data, software or other technology malfunctions, programming inaccuracies, unauthorized use or access, and similar circumstances may impair the performance of these systems and may have an adverse impact upon a single issuer, a group of issuers, or the market at large.

Repurchase Agreements Risk — Repurchase agreements carry certain risks, including risks that are not associated with direct investments in securities. If a seller under a repurchase agreement were to default on the agreement and be unable to repurchase the security subject to the repurchase agreement, the Portfolio would look to the collateral underlying the seller's repurchase agreement, including the securities or other obligations subject to the repurchase agreement, for satisfaction of the seller's obligation to the Portfolio. The Portfolio's right to liquidate the securities or other obligations subject to the repurchase agreement in the event of a default by the seller could involve certain costs and delays and, to the extent that proceeds from any sale upon a default of the obligation to repurchase are less than the repurchase price (e.g., due to transactions costs or a decline in the value of the collateral), the Portfolio could suffer a loss. In addition, if bankruptcy proceedings are commenced with respect to the seller, realization of the collateral may be delayed or limited and a loss may be incurred.

Portfolio Management Risk — The Portfolio is subject to the risk that strategies used by an investment manager and its securities selections fail to produce the intended results. An investment manager's judgments or decisions about the quality, relative yield or value of, or market trends affecting, a particular security or issuer, industry, sector, region or market segment, or about the economy or interest rates, may be incorrect or otherwise may not produce the intended results, which may result in losses to the Portfolio. In addition, many processes used in Portfolio management, including security selection, rely, in whole or in part, on the use of various technologies. The Portfolio may suffer losses if there are imperfections, errors or limitations in the quantitative, analytic or other tools, resources, information and data used, or the analyses employed or relied on, by an investment manager, or if such tools, resources, information or data are used incorrectly, fail to produce the desired results, or otherwise do not work as intended. There can be no assurance that the use of these technologies will result in effective investment decisions for the Portfolio.

Liquidity Risk — Although the Portfolio invests in a diversified portfolio of high quality instruments, the Portfolio's investments may become less liquid as a result of market developments or adverse investor perception.

Risk Associated with Portfolio Holding Cash — The Portfolio may maintain cash assets, which may be significant, with counterparties such as the Trust's custodian or its affiliates. Maintaining cash assets could negatively affect the Portfolio's current yield and may also subject the Portfolio to additional risks, such as increased credit risk with respect to the custodian bank holding the assets and the risk that a counterparty may be unable or unwilling, or perceived as unable or unwilling, to honor its obligations.

Risk/Return Bar Chart and Table

The bar chart and table below provide some indication of the risks of investing in the Portfolio by showing changes in the Portfolio's performance from year to year and by showing how the Portfolio's average annual total returns for the past one, five and ten years through December 31, 2023, compared to the returns of a broad-based securities market index. Past performance is not an indication of future performance.

Prior to April 1, 2016, the Portfolio was not designated as a "government money market fund," as defined in Rule 2a-7 under the Investment Company Act of 1940, and invested in certain types of securities that it is no longer permitted to hold. Consequently, the performance shown below may have been different if the current limitations on the Portfolio's investments had been in effect prior to its conversion to a government money market fund.

Class K shares have not commenced operations as of the date of this Prospectus.

The performance results do not reflect any Contract-related fees and expenses, which would reduce the performance results.

Calendar Year Annual Total Returns — Class IB

Average Annual Total Returns

	One Year	Five Years	Ten Years
EQ/Money Market Portfolio - Class IA	4.47%	1.48%	0.91%
EQ/Money Market Portfolio - Class IB	4.47%	1.48%	0.90%
ICE BofA 3-Month U.S. Treasury Bill Index (reflects no deduction for fees, expenses, or taxes)	5.04%	1.89%	1.26%

The Portfolio's 7-day yield as of December 31, 2023 was 4.73%.

WHO MANAGES THE PORTFOLIO

Investment Adviser: Equitable Investment Management Group, LLC ("EIM" or the "Adviser")

Sub-Adviser: Dreyfus, a division of Mellon Investments Corporation ("Dreyfus" or the "Sub-Adviser")

The Adviser is responsible for overseeing Sub-Advisers and recommending their hiring, termination and replacement to the Board of Trustees. The Adviser has been granted relief by the Securities and Exchange Commission to hire, terminate and replace Sub-Advisers for the Portfolio and enter into and amend sub-advisory agreements on behalf of the Portfolio subject to the approval of the Board of Trustees and without obtaining shareholder approval. The Adviser may not enter into a sub-advisory agreement on behalf of the Portfolio with an "affiliated person" of the Adviser unless the sub-advisory agreement is approved by the Portfolio's shareholders. The relief does not extend to any increase in the advisory fee paid by the Portfolio to the Adviser; any such increase would be subject to shareholder approval.

PURCHASE AND REDEMPTION OF PORTFOLIO SHARES

The Portfolio's shares are currently sold only to insurance company separate accounts in connection with Contracts issued by Equitable Financial Life Insurance Company ("Equitable Financial") or other affiliated or unaffiliated insurance companies and The Equitable 401(k) Plan. Shares also may be sold to other portfolios managed by EIM that currently sell their shares to such accounts and to other investors eligible under applicable federal income tax regulations. Class K shares may be sold only to other portfolios of the Trust and certain group annuity plans.

The Portfolio does not have minimum initial or subsequent investment requirements. Shares of the Portfolio are redeemable on any business day (which typically is any day the New York Stock Exchange is open) upon receipt of a request. All redemption requests will be processed and payment with respect thereto will normally be made within seven days after tender. Please refer to your Contract prospectus for more information on purchasing and redeeming Portfolio shares.

TAX INFORMATION

The Portfolio's shareholders are (or may include) insurance company separate accounts and other investors eligible under applicable federal income tax regulations. Distributions made by the Portfolio to such an account, and exchanges and redemptions of Portfolio shares made by such an account, ordinarily do not cause the holders of underlying Contracts to

recognize income or gain for federal income tax purposes at the time of the distributions, exchanges or redemptions; the holders generally are taxed only on amounts they withdraw from their Contract. See the prospectus for your Contract for further tax information.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

The Portfolio is not sold directly to the general public but instead is offered as an underlying investment option for Contracts and to other eligible investors. The Portfolio and the Adviser and its affiliates may make payments to sponsoring insurance companies (and their affiliates) or other financial intermediaries for distribution and/or other services. These payments may create a conflict of interest by influencing an insurance company or other financial intermediary and your financial adviser to recommend the Portfolio over another investment or by influencing an insurance company to include the Portfolio as an underlying investment option in the Contract. The prospectus (or other offering document) for your Contract may contain additional information about these payments. Ask your financial adviser or visit your financial intermediary's website for more information.

2. More information on fees and expenses

Advisory Fees

Each Portfolio pays a fee to the Adviser for advisory services. The table below shows the annual rate of the advisory fees (as a percentage of each Portfolio's average daily net assets) that the Adviser received in 2023 for providing advisory services to each Portfolio included in the table and the rate of the advisory fees waived by the Adviser in 2023 in accordance with the provisions of the Expense Limitation Agreement (including voluntary waivers, if any), as defined below, between the Adviser and the Trust with respect to certain Portfolios.

Advisory Fees Paid by the Portfolios in 2023

Portfolios	Annual Rate Received	Rate of Fees Waived and Expenses Reimbursed		
	All Classes	Class IA	Class IB	Class K
EQ/Common Stock Index Portfolio	0.31%	-0.02%	-0.02%	N/A
EQ/Core Plus Bond Portfolio*	0.60%	-0.16%	-0.16%	-0.16%
EQ/International Equity Index Portfolio	0.40%	-0.06%	-0.06%	-0.06%
EQ/Money Market Portfolio	0.32%	0.00%	0.00%	N/A
Multimanager Aggressive Equity Portfolio	0.57%	0.00%	0.00%	0.00%

* The table shows the annual rate of the advisory fees (as a percentage of the Portfolio's average daily net assets) that the Adviser received in 2023 for providing advisory services to the Portfolio and its predecessor portfolio and the rate of the advisory fees waived by the Adviser in 2023 in accordance with the provisions of the expense limitation agreement described below.

The Sub-Advisers are paid by the Adviser. Changes to the sub-advisory fees may be negotiated, which could result in an increase or decrease in the amount of the advisory fee retained by the Adviser, without shareholder approval. However, any amendment to an investment advisory agreement between EIM and the Trust that would result in an increase in the advisory fee rate specified in that agreement (*i.e.*, the aggregate advisory fee) charged to a Portfolio will be submitted to shareholders for approval.

A discussion of the basis for the decision by the Trust's Board of Trustees to approve the investment advisory and sub-advisory agreements with respect to the Portfolios is available in the Trust's Semi-Annual and Annual Reports to Shareholders for the periods ended June 30, 2023 and December 31, 2023, respectively.

The Administrator

Equitable Investment Management, LLC ("Administrator"), 1345 Avenue of the Americas, New York, New York 10105, serves as the Administrator of the Trust. The Administrator is an affiliate of the Adviser. The administrative services provided to the Trust by the Administrator include, among others, coordination of the Trust's audit, financial statements and tax returns; expense management and budgeting; legal administrative services and compliance monitoring; portfolio accounting services, including daily net asset value accounting; operational risk management; and assistance with the administration of the Trust's proxy voting policies and procedures and anti-money laundering program.

Administration Fees

For these administrative services, each Portfolio pays the Administrator its proportionate share of an asset-based administration fee, as described below.

With respect to the EQ/AB Short Duration Government Bond Portfolio, EQ/AB Sustainable U.S. Thematic Portfolio, EQ/ClearBridge Large Cap Growth ESG Portfolio, EQ/Janus Enterprise Portfolio, EQ/Loomis Sayles Growth Portfolio, EQ/Value Equity Portfolio, EQ/Capital Group Research Portfolio, EQ/Common Stock Index Portfolio, EQ/Core Bond Index Portfolio, EQ/Equity 500 Index Portfolio, EQ/Intermediate Corporate Bond Portfolio, EQ/Intermediate Government Bond Portfolio, EQ/International Equity Index Portfolio, EQ/Invesco Comstock Portfolio, EQ/JPMorgan Value Opportunities Portfolio, EQ/Large Cap Growth Index Portfolio, EQ/Large Cap Value Index Portfolio, EQ/MFS International Growth Portfolio, EQ/Mid Cap Index Portfolio, EQ/Money Market Portfolio, EQ/Invesco Global Portfolio, EQ/PIMCO Global Real Return Portfolio, EQ/PIMCO Ultra Short Bond Portfolio, EQ/Small Company Index Portfolio, EQ/JPMorgan Growth Stock Portfolio,

EQ/American Century Mid Cap Value Portfolio, EQ/Fidelity Institutional AM[®] Large Cap Portfolio, EQ/Franklin Rising Dividends Portfolio, EQ/Goldman Sachs Mid Cap Value Portfolio, EQ/Invesco Global Real Assets Portfolio, EQ/Wellington Energy Portfolio, EQ/MFS Mid Cap Focused Growth Portfolio, EQ/Lazard Emerging Markets Equity Portfolio, EQ/MFS International Intrinsic Value Portfolio, EQ/MFS Technology Portfolio, EQ/MFS Utilities Series Portfolio, EQ/T. Rowe Price Health Sciences Portfolio, EQ/PIMCO Real Return Portfolio, EQ/PIMCO Total Return ESG Portfolio, and EQ/Long-Term Bond Portfolio, each Portfolio pays the Administrator its proportionate share of an asset-based administration fee of 0.100% of the first \$30 billion of the aggregate average daily net assets of the Single-Advised Portfolios (as defined in the paragraph immediately below); 0.0975% of the next \$10 billion; 0.0950% of the next \$5 billion; 0.0775% of the next \$10 billion; 0.0750% of the next \$30 billion; and 0.0725% thereafter. The asset-based administration fee is calculated and billed monthly, and each Portfolio is subject to a minimum annual fee of \$30,000.

For purposes of calculating the asset-based administration fee, the assets of the Portfolios named in the immediately preceding paragraph are aggregated with the assets of the following Portfolios of the Trust, which also are managed by EIM and which are offered in another prospectus: 1290 VT Convertible Securities Portfolio, 1290 VT DoubleLine Opportunistic Bond Portfolio, 1290 VT Equity Income Portfolio, 1290 VT GAMCO Mergers & Acquisitions Portfolio, 1290 VT GAMCO Small Company Value Portfolio, 1290 VT Multi-Alternative Strategies Portfolio, 1290 VT Natural Resources Portfolio, 1290 VT Real Estate Portfolio, 1290 VT SmartBeta Equity ESG Portfolio, and 1290 VT Socially Responsible Portfolio (collectively, the “Single-Advised Portfolios”).

With respect to the EQ/Global Equity Managed Volatility Portfolio, EQ/International Core Managed Volatility Portfolio, EQ/International Value Managed Volatility Portfolio, EQ/Large Cap Core Managed Volatility Portfolio, EQ/Large Cap Growth Managed Volatility Portfolio, EQ/Large Cap Value Managed Volatility Portfolio, EQ/Mid Cap Value Managed Volatility Portfolio, EQ/AB Small Cap Growth Portfolio, EQ/Franklin Small Cap Value Managed Volatility Portfolio, EQ/Morgan Stanley Small Cap Growth Portfolio, EQ/ClearBridge Select Equity Managed Volatility Portfolio, EQ/Emerging Markets Equity PLUS Portfolio, EQ/Quality Bond PLUS Portfolio, Multimanager Aggressive Equity Portfolio, Multimanager Core Bond Portfolio, and Multimanager Technology Portfolio (each a “Hybrid Portfolio”), ATM International Managed Volatility Portfolio, ATM Large Cap Managed Volatility Portfolio, ATM Mid Cap Managed Volatility Portfolio, ATM Small Cap Managed Volatility Portfolio, EQ/2000 Managed Volatility Portfolio, EQ/400 Managed Volatility Portfolio, EQ/500 Managed Volatility Portfolio, and EQ/International Managed Volatility Portfolio (the “ATM Portfolios”), and EQ/AB Dynamic Aggressive Growth Portfolio, EQ/AB Dynamic Growth Portfolio, EQ/AB Dynamic Moderate Growth Portfolio, EQ/American Century Moderate Growth Allocation Portfolio, EQ/Franklin Moderate Allocation Portfolio, EQ/Goldman Sachs Growth Allocation Portfolio, EQ/Goldman Sachs Moderate Growth Allocation Portfolio, EQ/Invesco Moderate Allocation Portfolio, EQ/Invesco Moderate Growth Allocation Portfolio, EQ/JPMorgan Growth Allocation Portfolio, and EQ/Core Plus Bond Portfolio, each Portfolio pays the Administrator its proportionate share of an asset-based administration fee of 0.140% of the first \$60 billion of the aggregate average daily net assets of the Aggregated Portfolios (as defined in the paragraph immediately below); 0.110% of the next \$20 billion; 0.0875% of the next \$20 billion; 0.0775% of the next \$20 billion; 0.0750% of the next \$20 billion; and 0.0725% thereafter. The asset-based administration fee is calculated and billed monthly, and each Portfolio is subject to a minimum annual fee of \$32,500.

For purposes of calculating the asset-based administration fee, the assets of the Portfolios named in the immediately preceding paragraph are aggregated with the assets of the following Portfolios of the Trust, which also are managed by EIM and which are offered in other prospectuses: 1290 VT High Yield Bond Portfolio, 1290 VT Micro Cap Portfolio, 1290 VT Moderate Growth Allocation Portfolio, 1290 VT Small Cap Value Portfolio, EQ/Ultra Conservative Strategy Portfolio, EQ/Conservative Strategy Portfolio, EQ/Conservative Growth Strategy Portfolio, EQ/Balanced Strategy Portfolio, EQ/Moderate Growth Strategy Portfolio, EQ/Growth Strategy Portfolio, EQ/Aggressive Growth Strategy Portfolio, EQ/All Asset Growth Allocation Portfolio, Equitable Conservative Growth MF/ETF Portfolio, Equitable Growth MF/ETF Portfolio, Equitable Moderate Growth MF/ETF Portfolio, EQ/Aggressive Allocation Portfolio, EQ/Conservative Allocation Portfolio, EQ/Conservative-Plus Allocation Portfolio, EQ/Moderate Allocation Portfolio, EQ/Moderate-Plus Allocation Portfolio, Target 2015 Allocation Portfolio, Target 2025 Allocation Portfolio, Target 2035 Allocation Portfolio, Target 2045 Allocation Portfolio, and Target 2055 Allocation Portfolio (collectively, the “Aggregated Portfolios”).

Expense Limitation Agreement

In the interest of limiting through April 30, 2025 (unless the Board of Trustees consents to an earlier revision or termination of this arrangement) the expenses of each Portfolio listed in the following table, the Adviser has entered into an expense limitation agreement with the Trust with respect to the Portfolios (“Expense Limitation Agreement”). Pursuant to the Expense Limitation Agreement, the Adviser has agreed to waive its and its affiliates’ management, administrative and other fees and, if necessary, make payments to a Portfolio to limit the expenses of the Portfolios so that the annual operating expenses of

each Portfolio (other than interest, taxes, brokerage commissions, acquired fund fees and expenses (unless noted), dividend and interest expenses on securities sold short, other expenditures that are capitalized in accordance with generally accepted accounting principles, and other extraordinary expenses not incurred in the ordinary course of a Portfolio's business) as a percentage of average daily net assets do not exceed the following respective expense ratios:

Expense Limitation Provisions

Portfolios	Total Annual Operating Expenses Limited to (% of average daily net assets)		
	Class IA Shares	Class IB Shares	Class K Shares
EQ/International Equity Index Portfolio*,**	0.72%	0.72%	0.47%
Multimanager Aggressive Equity Portfolio	1.00%	1.00%	0.75%
EQ/Common Stock Index Portfolio**	0.67%	0.67%	0.42%
EQ/Core Plus Bond Portfolio*, +	0.93%	0.93%	0.68%

* For purposes of calculating the maximum annual operating expense limit, acquired fund fees and expenses are included in annual operating expenses.

** Effective October 1, 2023.

+ The Portfolio's predecessor portfolio was subject to the same total annual operating expense limit pursuant to an expense limitation agreement between the Adviser and the predecessor portfolio's trust.

The Adviser may be reimbursed the amount of any such waivers or payments in the future provided that the waivers or payments are reimbursed within three years of the waivers or payments being recorded and the Portfolio's expense ratio, after the reimbursement is taken into account, does not exceed the Portfolio's expense cap at the time of the waiver or the Portfolio's expense cap at the time of the reimbursement, whichever is lower. If the actual expense ratio is less than the expense cap and the Adviser has recouped any eligible previous waivers or payments made, the Portfolio will be charged such lower expenses.

Waivers or payments will increase returns and yield, and reimbursement of waivers or payments will decrease returns and yield.

3. More information on strategies, risks, benchmarks and underlying ETFs

Strategies

Changes in Investment Objectives and Investment Strategies

As described in this Prospectus, each Portfolio has its own investment objective, policies and strategies. There is no assurance that a Portfolio will achieve its investment objective. The investment objective of each Portfolio may be changed without shareholder approval. Except as otherwise noted, the investment policies and strategies of a Portfolio are not fundamental policies and may be changed without a shareholder vote. In addition, to the extent a Portfolio is new or is undergoing a transition (such as a reorganization or rebalancing, or experiences large inflows or outflows) or takes a temporary defensive position, it may not be pursuing its investment objective or executing its principal investment strategies.

80% Policies

Each of the following Portfolios has a policy that it will invest at least 80% of its net assets, plus borrowings for investment purposes, in a particular type of investment connoted by its name, as described in the section of the Prospectus entitled "About the Portfolios": EQ/AB Short Duration Government Bond Portfolio, EQ/AB Small Cap Growth Portfolio, EQ/AB Sustainable U.S. Thematic Portfolio, EQ/American Century Mid Cap Value Portfolio, ATM International Managed Volatility Portfolio, ATM Large Cap Managed Volatility Portfolio, ATM Mid Cap Managed Volatility Portfolio, ATM Small Cap Managed Volatility Portfolio, EQ/ClearBridge Large Cap Growth ESG Portfolio, EQ/ClearBridge Select Equity Managed Volatility Portfolio, EQ/Common Stock Index Portfolio, EQ/Core Bond Index Portfolio, EQ/Core Plus Bond Portfolio, EQ/Emerging Markets Equity PLUS Portfolio, EQ/Equity 500 Index Portfolio, EQ/Fidelity Institutional AM[®] Large Cap Portfolio, EQ/Franklin Rising Dividends Portfolio, EQ/Franklin Small Cap Value Managed Volatility Portfolio, EQ/Global Equity Managed Volatility Portfolio, EQ/Goldman Sachs Mid Cap Value Portfolio, EQ/Intermediate Corporate Bond Portfolio, EQ/Intermediate Government Bond Portfolio, EQ/International Equity Index Portfolio, EQ/International Value Managed Volatility Portfolio, EQ/Invesco Comstock Portfolio, EQ/Invesco Global Real Assets Portfolio, EQ/JPMorgan Growth Stock Portfolio, EQ/Large Cap Core Managed Volatility Portfolio, EQ/Large Cap Growth Managed Volatility Portfolio, EQ/Large Cap Value Managed Volatility Portfolio, EQ/Long-Term Bond Portfolio, EQ/Mid Cap Value Managed Volatility Portfolio, EQ/Morgan Stanley Small Cap Growth Portfolio, EQ/Large Cap Growth Index Portfolio, EQ/Large Cap Value Index Portfolio, EQ/Lazard Emerging Markets Equity Portfolio, EQ/MFS International Growth Portfolio, EQ/MFS Mid Cap Focused Growth Portfolio, EQ/MFS Technology Portfolio, EQ/MFS Utilities Series Portfolio, EQ/Mid Cap Index Portfolio, EQ/PIMCO Global Real Return Portfolio, EQ/PIMCO Ultra Short Bond Portfolio, EQ/Quality Bond PLUS Portfolio, EQ/Small Company Index Portfolio, EQ/T. Rowe Price Health Sciences Portfolio, EQ/Value Equity Portfolio, EQ/Wellington Energy Portfolio, Multimanager Aggressive Equity Portfolio, Multimanager Core Bond Portfolio, and Multimanager Technology Portfolio. Each such policy is subject to change only upon at least sixty (60) days' prior notice to shareholders of the affected Portfolio. As applicable, to the extent a Portfolio invests in securities of other investment companies or investment vehicles (such as exchange-traded funds), it takes into consideration the investment policies of such investment companies and investment vehicles at the time of investment in determining compliance with its 80% policy. The 80% investment requirement is applied at the time a Portfolio invests its assets. If, subsequent to an investment by a Portfolio, this requirement is no longer met, the Portfolio's future investments will be made in a manner consistent with bringing the Portfolio into compliance with this requirement. In addition, in appropriate circumstances, synthetic investments may count toward the 80% minimum if they have economic characteristics similar to the other investments included in the 80% policy. In addition, a Portfolio may specify a market capitalization range for acquiring portfolio securities. If a security that is within the range at the time of purchase later appreciates or depreciates in value outside the range, which may happen due to market fluctuation, the Portfolio may continue to hold the security. However, this change in market capitalization could affect the Portfolio's flexibility in making additional investments in securities of the applicable issuer, and the continued investment in securities of the issuer could cause the Portfolio to be subject to additional risks, such as those associated with holding securities of larger or smaller capitalization companies, as the case may be.

Concentration Policies

EQ/Invesco Global Real Assets Portfolio will concentrate its investments in the securities of domestic and foreign real estate and real estate related companies. EQ/Wellington Energy Portfolio will concentrate its investments in the energy industry. EQ/MFS Technology Portfolio will concentrate its investments in the securities of issuers in the industries in the technology sector as defined in the Portfolio's prospectus. EQ/MFS Utilities Series Portfolio will concentrate its investments in the utilities industry as defined in the Portfolio's prospectus. EQ/T. Rowe Price Health Sciences Portfolio will concentrate its investments in the health sciences industry as defined in the Portfolio's prospectus. Multimanager Technology Portfolio will concentrate its investments in the related group of industries consisting of the technology industries (e.g., computers, electronics (including hardware and components),

communications, software, e-commerce, information service, biotechnology, chemical products and synthetic materials, and defense and aerospace industries). Each Portfolio's concentration policy is a fundamental policy and may not be changed without a shareholder vote.

Indexing Strategies

As described in this Prospectus, certain Portfolios (or portions thereof) seek to track the total return performance (before fees and expenses) of a particular index. Additional information about these indexes is provided in the section "Benchmarks and Other Indexes." The following provides additional information regarding the management strategies employed by the Sub-Advisers of these Portfolios (or portions thereof) in pursuing these objectives.

The Sub-Adviser to a Portfolio (or portion thereof) that seeks to track the total return performance (before fees and expenses) of a particular index does not utilize customary economic, financial or market analyses or other traditional investment techniques to manage the Portfolio (or portion). Rather, the Sub-Adviser may employ a full replication technique or sampling technique in seeking to track the total return performance (before fees and expenses) of the index. A full replication technique generally involves holding each security in a particular index in approximately the same weight that the security represents in the index. Conversely, a sampling technique strives to match the characteristics of a particular index without having to purchase every security in that index by selecting a representative sample of securities for the Portfolio (or portion thereof) based on the characteristics of the index and the particular securities included therein. Such characteristics may include, with respect to equity indexes, industry weightings, market capitalizations and fundamental characteristics and, with respect to fixed income indexes, interest rate sensitivity, credit quality and sector diversification.

In addition, during any period when the Adviser or the Sub-Adviser to a Portfolio determines that it would be impracticable or uneconomical for a Portfolio to invest its assets in accordance with its primary investment policies (e.g., the Portfolio does not have sufficient assets to buy all of the securities in a particular index and to manage those assets in an efficient manner), the Portfolio may pursue its investment strategy by investing in other portfolios, as consistent with the Portfolio's investment policies and strategies, including portfolios managed by the Adviser to the extent permitted by statute or regulation.

Tactical Strategies

As described in this Prospectus, the Adviser invests a portion of certain Portfolios' assets in futures and options to manage each such Portfolio's overall equity exposure. The following provides additional information regarding the Adviser's implementation of these management strategies.

Each such Portfolio uses proprietary models to implement its tactical investment strategy. The level of the Portfolio's exposure to a particular index generally is determined based on an assessment of market fundamentals and quantitative signals of market movement, including the level of volatility in the market as may be measured by the Chicago Board Options Exchange Volatility Index (the "VIX Index") or another quantitative indicator of market volatility. The VIX Index is a measure of market expectations of near-term volatility based on the S&P 500 Index option prices. The Portfolio will decrease or increase its exposure to the relevant index based on thresholds of market volatility as measured by the VIX Index or another quantitative indicator of market volatility. These thresholds may be different for each Portfolio and may be changed from time to time without shareholder approval. The thresholds for each Portfolio may differ based on a variety of factors, including whether the particular Portfolio is offered on a stand alone basis as an investment option for Contract owners or as an investment option for other portfolios managed by the Adviser that invest in the Portfolio as part of an investment strategy to manage the overall volatility of the investing fund's portfolio. During periods of extremely high market volatility, it is possible that a Portfolio could have zero or negative exposure to the relevant index. During periods of unusually low market volatility, it is possible that a Portfolio could have 100% or more exposure to the relevant index.

Allocation Strategies

Hybrid Portfolios

As described in this Prospectus, the Adviser allocates the assets of the Hybrid Portfolios among two or more portions of those Portfolios, each of which is managed using different yet complementary investment strategies.

Each allocation percentage for the Hybrid Portfolios is an asset allocation target established by EIM intended to achieve the Hybrid Portfolio's investment objective and may be changed without shareholder approval. Each portion of a Hybrid Portfolio may deviate temporarily from its asset allocation target for defensive purposes, in response to large inflows or outflows of assets to and from the Hybrid Portfolio (e.g., in connection with asset allocation rebalancing transactions, reorganization transactions and separate account substitution transactions), or as a result of appreciation or depreciation of its holdings. EIM rebalances each portion of a Hybrid Portfolio as it deems appropriate. To the extent that a Hybrid Portfolio is being rebalanced, experiences large inflows or outflows, or takes a temporary defensive position, it may not be pursuing its investment objective or executing its principal investment strategy.

Allocation Portfolios

As described in this Prospectus, by adjusting investment exposure among the various asset classes in certain of the allocation Portfolios, a Sub-Adviser will attempt to reduce overall portfolio volatility and mitigate the effects of extreme market environments, without sacrificing long-term returns. A Portfolio may gain or adjust exposure to each asset class either through transactions in individual securities or Underlying ETFs, as applicable, or through other instruments, including derivatives.

Active Management Strategies

With respect to Portfolios that utilize active management strategies, a Sub-Adviser has complete discretion to select portfolio securities for its portion of a Portfolio's assets, subject to the Portfolio's investment objectives, restrictions and policies and other parameters that may be developed from time to time by the Adviser. In selecting investments, the Sub-Advisers use their proprietary investment strategies, which are summarized above in the section "About the Portfolios — Investments, Risks, and Performance — Principal Investment Strategy" for each Portfolio. The following is an additional general description of certain common types of active management strategies that may be used by the Sub-Advisers to the Portfolios.

Growth investing generally focuses on companies that, due to their strong earnings and revenue potential, offer above-average prospects for capital growth, with less emphasis on dividend income. Earnings predictability and confidence in earnings forecasts are an important part of the selection process. A Sub-Adviser using this approach generally seeks out companies experiencing some or all of the following: high sales growth, high unit growth, high or improving returns on assets and equity, and a strong balance sheet. Such a Sub-Adviser also generally prefers companies with a competitive advantage such as unique management, marketing or research and development.

Value investing attempts to identify strong companies selling at a discount from their perceived true worth. A Sub-Adviser using this approach generally selects stocks at prices that, in its view, are temporarily low relative to the company's earnings, assets, cash flow and dividends. Value investing generally emphasizes companies that, considering their assets and earnings history, are attractively priced and may provide dividend income.

Core investing is an investment style that includes both the strategies used when seeking either growth companies (those with strong earnings growth) or value companies (those that may be temporarily out of favor or have earnings or assets not fully reflected in their stock price).

Fundamental analysis generally involves the analysis of the balance sheet and income statements of a company in order to forecast its future stock price movements. Fundamental analysis considers past records of assets, earnings, sales, products, management and markets in predicting future trends in these indicators of a company's success or failure. By appraising a company's prospects, analysts using such an approach assess whether a particular stock or group of stocks is undervalued or overvalued at its current market price.

Sustainable Investment Themes

The EQ/AB Sustainable U.S. Thematic Portfolio's sustainable investment themes include the advancement of health, climate, and empowerment, and align with one or more of the United Nations Sustainable Development Goals ("SDGs"). The SDGs, adopted by 193 countries in 2015, are the world's shared plan to end extreme poverty, reduce inequality, and protect the planet by 2030. The SDGs are a collection of 17 global goals: no poverty; zero hunger; good health and well-being; quality education; gender quality; clean water and sanitation; affordable and clean energy; decent work and economic growth; industry, innovation, and infrastructure; reduced inequalities; sustainable cities and communities; responsible consumption and production; climate action; life below water; life on land; peace, justice and strong institutions; and partnerships for the goals.

The SDGs provide the EQ/AB Sustainable U.S. Thematic Portfolio's Sub-Adviser with a helpful framework for identifying sustainable investment themes and potential investments. The Portfolio's Climate theme investments consist of companies that improve overall resource efficiency and provide environmentally positive solutions in fields such as energy production, manufacturing, construction, transportation, agriculture and sanitation. The Portfolio's Climate theme, for example, aligns with SDGs such as climate action; affordable and clean energy; and clean water and sanitation. The Portfolio's Health theme investments consist of companies that develop innovative health treatments and therapies, broaden access to high-quality and affordable care, ensure a steady supply of nutritious food and clean water, and promote overall physical and emotional well-being. The Portfolio's Health theme aligns with SDGs such as good health and well-being; and clean water and sanitation. The Portfolio's Empowerment theme investments consist of companies that provide the physical, financial and technological infrastructure and services that allow more people to gain control of their lives by enabling sustainable economic development, employment growth, poverty eradication, knowledge sharing and social inclusion. The Portfolio's Empowerment theme aligns with SDGs such as quality education; decent work and economic growth; and no poverty.

Underlying ETFs

As described in this Prospectus, the EQ/American Century Moderate Growth Allocation Portfolio, EQ/Goldman Sachs Growth Allocation Portfolio and EQ/JPMorgan Growth Allocation Portfolio may invest primarily in ETFs (for purposes of this discussion, “Underlying ETFs”) and derivative instruments, rather than in individual securities, to gain broad exposure to a particular asset category. Accordingly, each Portfolio’s performance depends upon a favorable allocation by its Sub-Adviser among the Underlying ETFs as well as the ability of the Underlying ETFs to generate favorable performance. For additional information about ETFs, please see “Additional Information about the Investment Strategies – Exchange-Traded Funds (“ETFs”).”

The Underlying ETFs in which the EQ/American Century Moderate Growth Allocation Portfolio, EQ/Goldman Sachs Growth Allocation Portfolio and EQ/JPMorgan Growth Allocation Portfolio currently may invest are listed below. This list may change from time to time at the discretion of the Sub-Adviser without notice or shareholder approval. A Portfolio will not necessarily invest in every Underlying ETF at one time. Additional information regarding the Underlying ETFs is included in their current prospectuses.

EQ/American Century Moderate Growth Allocation Portfolio

US Large Cap: iShares[®] Core S&P 500[®] ETF, SPDR[®] S&P 500[®] ETF Trust, SPDR[®] Portfolio S&P 500[®] ETF, Vanguard S&P 500 ETF

US Mid Cap: iShares[®] Core S&P Mid-Cap ETF

US Small Cap: iShares[®] Russell 2000 ETF

International Developed: iShares[®] Core MSCI EAFE ETF, iShares MSCI EAFE ETF

Investment Grade: SPDR[®] Bloomberg 1-3 Month T-Bill ETF, Vanguard Intermediate-Term Corporate Bond ETF

Treasuries: Vanguard Intermediate-Term Treasury Index Fund ETF, SPDR[®] Portfolio Intermediate Term Treasury ETF, iShares[®] 7-10 Year Treasury Bond ETF, iShares[®] U.S. Treasury Bond ETF

EQ/Goldman Sachs Growth Allocation Portfolio

US Large Cap: iShares[®] Core S&P 500 ETF, SPDR[®] S&P 500[®] ETF Trust, Vanguard S&P 500 ETF

Investment Grade: Vanguard Intermediate-Term Corporate Bond ETF

EQ/JPMorgan Growth Allocation Portfolio

US Large Cap: Vanguard S&P 500 ETF

Investment Grade: iShares[®] 1-3 Year Treasury Bond ETF, iShares[®] 3-7 Year Treasury Bond ETF, iShares[®] 7-10 Year Treasury Bond ETF, SPDR[®] Portfolio Intermediate Term Treasury ETF

Additional Information about the Investment Strategies

The following provides additional information regarding the principal investment strategies discussed in the “About the Portfolios — Investments, Risks, and Performance — Principal Investment Strategy” section for each Portfolio, and information regarding additional investment strategies that a Portfolio may employ. The Portfolios also may make other types of investments to the extent permitted by applicable law. For further information about investment strategies, please see the Portfolios’ Statement of Additional Information (“SAI”).

Bank Loans — A Portfolio may invest in bank loans. A bank loan represents an interest in a loan or other direct indebtedness that entitles the acquirer of such interest to payments of interest, principal and/or other amounts due under the structure of the loan. A Portfolio may acquire a bank loan through a participation interest, which gives the Portfolio the right to receive payments of principal, interest and/or other amounts only from the lender selling the participation interest and only when the lender receives the payments from the borrower, or through an assignment in which the Portfolio succeeds to the rights of the assigning lender and becomes a lender under the loan agreement. Bank loans are typically borrowers’ senior debt obligations and, as such, are considered to hold a senior position in the borrower’s capital structure. The senior capital structure position generally gives the holders of bank loans a priority claim on some or all of the borrower’s assets in the event of a default. In many situations, the assets or cash flow of the borrowing corporation, partnership or other business entity may serve as collateral for the bank loan. Bank loans may be issued in connection with acquisitions, refinancings and recapitalizations.

Cash and Short-Term Investments — A Portfolio may hold cash or invest in short-term paper and other short-term investments as deemed appropriate by the Adviser or Sub-Adviser. Short-term paper generally includes any note, draft bill of exchange or banker’s acceptance payable on demand or having a maturity at the time of issuance that does not exceed nine months or any renewal thereof payable on demand or having a maturity that is likewise limited.

A Portfolio also may invest its uninvested cash in high-quality, short-term debt securities, including repurchase agreements and high-quality money market instruments, and also may invest its uninvested cash in money market funds, including money market

funds managed by the Adviser. To the extent a Portfolio invests in a money market fund, it generally is not subject to the limits placed on investments in other investment companies by the 1940 Act, as discussed in "Securities of Other Investment Companies."

On a day-to-day basis, each of the ATM Portfolios typically will hold a significant portion of its assets in shares of the EQ/Money Market Portfolio or other money market funds, U.S. government securities, short-term, high-quality fixed income securities, money market instruments, overnight and fixed-term repurchase agreements, cash, and other cash equivalents with maturities of one year or less to collateralize its futures and other positions, to earn income for the Portfolio and to manage the Portfolio's overall exposure to debt or equity securities.

Generally, these securities offer less potential for gains than other types of securities.

Convertible Securities — A Portfolio may invest in convertible securities, including both convertible debt and convertible preferred stock. A convertible security is generally a bond, preferred stock or other security that may be converted within a specified period of time and at a pre-stated price or formula into the common stock of the same or a different issuer. A convertible security entitles the holder to receive interest paid or accrued on debt or the dividend paid on preferred stock until the convertible security matures or is redeemed, converted or exchanged. Convertible securities have unique investment characteristics in that they generally: (1) have higher yields than common stocks, but lower yields than comparable nonconvertible securities; (2) are less subject to fluctuation in value than the underlying stock because they have fixed income characteristics; and (3) provide the potential for capital appreciation if the market price of the underlying common stock increases.

Currency — A Portfolio may enter into foreign currency transactions for hedging and non-hedging purposes on a spot (i.e., cash) basis or through the use of derivatives. A forward foreign currency exchange contract ("forward contract") is a type of derivative that involves an obligation to purchase or sell a specific currency at a future date, which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. These contracts are principally traded in the interbank market conducted directly between currency traders (usually large, commercial banks) and their customers. A forward contract generally has no margin deposit requirement and no commissions are charged at any stage for trades. Foreign currency transactions may be used to protect a Portfolio's foreign securities from adverse currency movements relative to the U.S. dollar, as well as to gain exposure to currencies and markets expected to increase or decrease in value relative to other currencies or securities. The value of these foreign currency transactions depends on, and will vary based on fluctuations in, the value of the underlying currency relative to the U.S. dollar. If a particular currency is expected to decrease in value relative to another currency, a Portfolio may sell the currency expected to decrease and purchase a currency that is expected to increase against the currency sold. A Portfolio's cross hedging transactions may involve currencies in which the Portfolio's holdings are denominated. However, a Portfolio is not required to own securities in the particular currency being purchased or sold.

Derivatives — A Portfolio may use "derivative" instruments to hedge its portfolio against market, economic, currency, issuer and other risks, to gain or manage exposure to the markets, sectors and securities in which the Portfolio may invest and to other economic factors that affect the Portfolio's performance (such as interest rate movements), to increase total return or income, to reduce transaction costs, to manage cash, and for other portfolio management purposes. In general terms, a derivative instrument is an investment contract, the value of which is linked to (or is derived from), in whole or in part, the value of an underlying asset, reference rate or index (e.g., stocks, bonds, commodities, currencies, interest rates and market indexes). Futures and options contracts (including futures and options on individual securities and equity and bond market indexes and options on futures contracts), swaps (including interest rate swaps, total return swaps, currency swaps, credit default swaps and contracts for difference) and forward contracts, and structured securities, including forward currency contracts, are examples of derivatives in which a Portfolio may invest. A Portfolio that engages in derivatives transactions may maintain a significant percentage of its assets in cash and cash equivalent instruments or other liquid assets, which may serve as margin or collateral for the Portfolio's obligations under derivative transactions.

Equity Securities — A Portfolio, including a Portfolio that invests primarily in debt securities, may invest in equity securities. Equity securities may be bought on stock exchanges or in the over-the-counter market. Equity securities generally include common stock, preferred stock, warrants, securities convertible into common stock, securities of other investment companies and securities of real estate investment trusts.

Exchange-Traded Funds ("ETFs") — A Portfolio may invest in ETFs. ETFs are investment companies or other investment vehicles whose shares are listed and traded on U.S. stock exchanges or otherwise traded in the over-the-counter market and may be purchased and sold throughout the trading day based on their market price. Generally, an index-based ETF seeks to track a securities index or a basket of securities that an "index provider" (such as Standard & Poor's, Morgan Stanley Capital International (MSCI), FTSE Group, or Bloomberg) selects as representative of a market, market segment, industry sector, country or geographic region. An index-based ETF generally holds the same stocks or bonds as the index it seeks to track (or it may hold a representative sample of such securities). Accordingly, an index-based ETF is designed so that its performance, before fees and expenses, will correspond with that of the index it seeks to track. ETFs also may be actively managed.

When a Portfolio invests in ETFs, it will indirectly bear its proportionate share of the fees and expenses incurred by the ETFs. These fees and expenses are in addition to the advisory fees and other expenses that a Portfolio and its shareholders bear directly in connection with the Portfolio's own operations. As a result, a Portfolio's shareholders will be subject to two layers of fees and expenses with respect to investments in the Portfolio. A Portfolio also will pay brokerage commissions in connection with the purchase and sale of shares of ETFs.

Generally, a Portfolio's investments in other investment companies (including ETFs) are subject to statutory limitations in the Investment Company Act of 1940, as amended ("1940 Act"), including in certain circumstances a prohibition against acquiring shares of another investment company if, immediately after such acquisition, the Portfolio (i) would hold more than 3% of such other investment company's total outstanding shares, (ii) would have invested more than 5% of its total assets in such other investment company, or (iii) would have invested more than 10% of its total assets in investment companies in the aggregate. However, there are regulatory exemptions from these restrictions under the 1940 Act on which a Portfolio may rely to invest in ETFs in excess of these limits, subject to certain conditions.

Fixed Income Securities — A Portfolio may invest in short- and long-term fixed income securities in pursuing its investment objective and for other fund management purposes, such as to manage cash. Fixed income securities are debt securities such as bonds, notes, debentures and commercial paper. Domestic and foreign governments, banks and companies raise cash by issuing or selling debt securities to investors. Most debt securities pay fixed or adjustable rates of interest at regular intervals until they mature, at which point investors receive their principal back.

Foreign Securities — A Portfolio may invest in foreign securities. Generally, foreign securities are issued by companies organized outside the U.S. or by foreign governments or international organizations, are traded primarily in markets outside the United States, and are denominated in a foreign currency. Foreign securities may include securities of issuers in developing countries or emerging markets. In addition, foreign securities may include depositary receipts of foreign companies. American Depositary Receipts are receipts typically issued by an American bank or trust company that evidence underlying securities issued by a foreign corporation. European Depositary Receipts (issued in Europe) and Global Depositary Receipts (issued throughout the world) each evidence a similar ownership arrangement. Depositary receipts also may be convertible into securities of foreign issuers. These securities may not necessarily be denominated in the same currency as the securities into which they may be converted.

Futures — A Portfolio may purchase or sell futures contracts on individual securities or securities indexes. In purchasing a futures contract, the buyer agrees to purchase a specified underlying instrument at a specified future date. In selling a futures contract, the seller agrees to sell a specified underlying instrument at a specified future date. The price at which the purchase and sale will take place is fixed when the buyer and seller enter into the contract. Futures can be held until their delivery dates, or can be closed out before then if a liquid market is available. The value of a futures contract tends to increase and decrease in tandem with the value of its underlying instrument. Therefore, purchasing futures contracts will tend to increase a Portfolio's exposure to positive and negative price fluctuations in the underlying instrument, much as if it had purchased the underlying instrument directly. When a Portfolio sells a futures contract, by contrast, the value of its futures position will tend to move in a direction contrary to the market. Selling futures contracts, therefore, will tend to offset both positive and negative market price changes, much as if the underlying instrument had been sold. Futures contracts in which a Portfolio may invest are highly standardized contracts that typically trade on futures exchanges.

The use of futures contracts and similar instruments may be deemed to involve the use of leverage because a Portfolio is not required to invest the full market value of the futures contract upon entering into the contract. Instead, a Portfolio, upon entering into a futures contract (and to maintain its open position in a futures contract), is required to post collateral for the contract, known as "initial margin" and "variation margin," the amount of which may vary but which generally equals a relatively small percentage (e.g., less than 5%) of the value of the contract being traded.

Illiquid Investments — A Portfolio may invest up to 15% of its net assets in illiquid investments, except the EQ/Money Market Portfolio, which may invest up to 5% of its net assets in illiquid investments. Illiquid investment means any investment a Portfolio reasonably expects cannot be sold or disposed of in current market conditions in seven calendar days or less without the sale or disposition significantly changing the market value of the investment.

Inflation-Indexed Bonds — A Portfolio may invest in inflation-indexed bonds. Inflation-indexed bonds (other than municipal inflation-indexed bonds and certain corporate inflation-indexed bonds, which are more fully described below) are fixed income securities whose principal value is periodically adjusted according to the rate of inflation. The U.S. Treasury Department uses the Consumer Price Index for Urban Consumers as the inflation measure for Treasury inflation-indexed bonds. Inflation-indexed bonds issued by a foreign government are generally adjusted to reflect a comparable inflation-index, calculated by that government. If the index measuring inflation falls, the principal value of inflation-indexed bonds (other than municipal inflation-indexed bonds and certain corporate inflation-indexed bonds) will be adjusted downward, and consequently the interest payable on these securities

(calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of U.S. Treasury Department inflation-indexed bonds. For bonds that do not provide a similar guarantee, the adjusted principal value of the bond repaid at maturity may be less than the original principal.

With regard to municipal inflation-indexed bonds and certain corporate inflation-indexed bonds, the inflation adjustment is reflected in the semi-annual coupon payment. As a result, the principal value of municipal inflation-indexed bonds and such corporate inflation-indexed bonds does not adjust according to the rate of inflation. The value of inflation-indexed bonds is expected to change in response to changes in real interest rates. Real interest rates are tied to the relationship between nominal interest rates and the rate of inflation. If nominal interest rates increase at a faster rate than inflation, real interest rates may rise, leading to a decrease in value of inflation-indexed bonds. Any increase in the principal amount of an inflation-indexed bond is considered ordinary income in the taxable year of the increase to an investing Portfolio, which generally must distribute the amount of that income for federal income tax purposes even though it does not receive the increased principal until maturity.

Because market convention for bonds is to use nominal yields to measure duration, duration for real return bonds, which are based on real yields, are converted to nominal durations through a conversion factor. The resulting nominal duration typically can range from 20% and 90% of the respective real duration. All security holdings will be measured in effective (nominal) duration terms. Similarly, the effective duration of the relevant index (e.g., the Bloomberg World Government Inflation-Linked Index (hedged)) will be calculated using the same conversion factors.

Initial Public Offerings (“IPOs”) — A Portfolio may participate in the IPO market. An IPO is the first sale of stock by a company to the public. Companies offering an IPO are sometimes new or young companies or sometimes companies that have been around for many years but are deciding to go public.

Insured Bank Obligations — The Federal Deposit Insurance Corporation (“FDIC”) insures the deposits of federally insured banks and savings and loan associations (collectively referred to as “banks”) up to \$250,000. A Portfolio may purchase bank obligations which are fully insured as to principal by the FDIC. Currently, to remain fully insured as to principal, these investments must be limited to \$250,000 per bank; if the principal amount and accrued interest together exceed \$250,000, the excess accrued interest will not be insured. Insured bank obligations may have limited marketability. Unless a Portfolio determines that a readily available market exists for such obligations, a Portfolio will treat such obligations as subject to the limit for illiquid investments unless such obligations are payable at principal amount plus accrued interest on demand or within seven days after demand.

Inverse Floaters — Certain Portfolios may invest in inverse floaters. Inverse floaters are securities that have coupon rates that vary inversely at a multiple of a designated floating rate, such as the Secured Overnight Financing Rate or an alternative reference rate. Any rise in the reference rate of an inverse floater (as a consequence of an increase in interest rates) causes a drop in the coupon rate, while any drop in the reference rate of an inverse floater causes an increase in the coupon rate.

Investment Grade Securities — A Portfolio may invest in investment grade debt securities. Investment grade securities are rated in one of the four highest rating categories by Moody’s, S&P or Fitch, comparably rated by another rating agency or, if unrated, determined by the Adviser or the applicable Sub-Adviser to be of comparable quality.

Mortgage- and Asset-Backed Securities — A Portfolio may invest in mortgage- and asset-backed securities. A mortgage-backed security may be an obligation of the issuer backed by a mortgage or pool of mortgages or a direct interest in an underlying pool of mortgages. Some mortgage-backed securities make payments of both principal and interest at a variety of intervals; others make semiannual interest payments at a predetermined rate and repay principal at maturity (like a typical bond). Mortgage-backed securities are based on different types of mortgages, including those on commercial real estate or residential properties.

Asset-backed securities have structural characteristics similar to mortgage-backed securities. However, the underlying assets are not first lien mortgage loans or interests therein but include assets such as motor vehicle installment sales contracts, other installment sales contracts, home equity loans, leases of various types of real and personal property and receivables from revolving credit (credit card) agreements. Such assets are securitized through the use of trusts or special purpose corporations. Payments or distributions of principal and interest may be guaranteed up to a certain amount and for a certain time period by a letter of credit or pool insurance policy issued by a financial institution unaffiliated with the issuer, or other credit enhancements may be present.

Non-Investment Grade Securities — A Portfolio may invest in securities rated below investment grade (i.e., BB or lower by S&P or Fitch, Ba or lower by Moody’s or deemed to be of comparable quality by the Adviser or a Sub-Adviser), sometimes referred to as “junk bonds”. Junk bonds are usually issued by companies without long track records of sales and earnings or by those companies with questionable credit strength.

Options — A Portfolio may write and purchase put and call options, including exchange-traded or over-the-counter put and call options on securities indices and put and call options on ETFs tracking certain securities indices, for hedging and non-hedging purposes

and for the purpose of achieving its objective. In general, options give the purchaser the right, but not the obligation, to buy or sell in the future an asset at a predetermined price during the term of the option. A securities index option and an ETF option are option contracts whose values are based on the value of a securities index at some future point in time. A securities index fluctuates with changes in the market values of the securities included in the index. The effectiveness of purchasing or writing securities index options will depend upon the extent to which price movements in a Portfolio's investment portfolio correlate with price movements of the securities index. By writing (selling) a call option, a Portfolio forgoes, in exchange for the premium less the commission, the opportunity to profit during the option period from an increase in the market value of an index above the exercise price. By writing (selling) a put option, a Portfolio, in exchange for the net premium received, accepts the risk of a decline in the market value of the index below the exercise price.

Portfolio Turnover — The Portfolios do not restrict the frequency of trading to limit expenses. A Portfolio may engage in active and frequent trading of portfolio securities to achieve its investment objective. A portfolio turnover rate of 100%, for example, is equivalent to a Portfolio buying and selling all of its portfolio securities once during the course of a given fiscal year. High portfolio turnover (generally, turnover in excess of 100% in any given fiscal year) may result in increased transaction costs to a Portfolio, which may result in higher fund expenses and lower total return, and an increase in taxable capital gains distributions to the Portfolio's shareholders (although tax implications for investments in Contracts typically are deferred during the accumulation phase).

Preferred Stocks — A Portfolio may invest in preferred stocks. Although preferred stocks represent a partial ownership interest in a company, preferred stocks generally do not carry voting rights and have economic characteristics similar to fixed-income securities. Preferred stocks generally are issued with a fixed par value and pay dividends based on a percentage of that par value at a fixed or variable rate. Preferred stocks often have a liquidation value that generally equals the original purchase price of the preferred stock at the date of issuance.

Real Estate Investment Trusts ("REITs") — A Portfolio may invest in REITs, which are pooled vehicles that invest primarily in income-producing real estate or loans related to real estate and are defined by the federal tax law. A REIT is not subject to federal corporate income tax, provided it complies with a number of Internal Revenue Code requirements, including distributing a significant portion of its net income to its shareholders. Various other countries have also adopted REIT-like structures that receive comparable tax treatment, provided certain requirements are met.

Securities Lending — Each Portfolio (except for the EQ/Money Market Portfolio and any Portfolio that is sub-advised by an affiliate of JPMorgan Chase Bank, N.A.) may lend its portfolio securities to brokers, dealers, other financial institutions and other eligible persons so long as such loans do not represent more than 33-1/3% of the Portfolio's total assets (including any collateral received from the loans). Loans of portfolio securities permit a Portfolio to earn additional income on its portfolio securities. All loans of portfolio securities by a Portfolio will be made pursuant to agreements that require the loans to be continuously secured by collateral in the form of cash or U.S. government or agency securities with a value at least equal at all times to the current market value of the securities loaned. The value of the securities on loan may change each business day. A Portfolio with securities on loan generally will be entitled to obtain additional collateral from, or return excess collateral to, a borrower by the end of the next business day following a change in the value of the securities on loan. A Portfolio may reinvest cash collateral received in connection with a securities loan in short-term, highly liquid investments, such as money market funds and repurchase agreements, to earn additional returns.

Securities of Other Investment Companies — A Portfolio may invest in the securities of other investment companies to the extent permitted by applicable law. Generally, a Portfolio's investments in other investment companies are subject to statutory limitations in the 1940 Act, including in certain circumstances a prohibition against acquiring shares of another investment company if, immediately after such acquisition, the Portfolio (i) would hold more than 3% of such other investment company's total outstanding shares, (ii) would have invested more than 5% of its total assets in such other investment company, or (iii) would have invested more than 10% of its total assets in investment companies in the aggregate. However, there are statutory and regulatory exemptions from these restrictions under the 1940 Act on which a Portfolio may rely to invest in other investment companies in excess of these limits, subject to certain conditions. Other investment companies in which a Portfolio may invest include ETFs, as discussed in "Exchange-Traded Funds ("ETFs").

When a Portfolio invests in other investment companies, it will indirectly bear its proportionate share of the fees and expenses incurred by those investment companies. These fees and expenses are in addition to the advisory fees and other expenses that a Portfolio and its shareholders bear directly in connection with the Portfolio's own operations. As a result, a Portfolio's shareholders will be subject to two layers of fees and expenses with respect to investments in the Portfolio.

Short Sales — A Portfolio may engage in short sales and may enter into derivative contracts that have a similar economic effect (e.g., taking a short position in a futures contract). A "short sale" is the sale by a Portfolio of a security that has been borrowed from a third party on the expectation that the market price will drop. If the price of the security drops, a Portfolio will make a profit by purchasing the security in the open market at a price lower than the price at which it sold the security. If the price of the security rises, a Portfolio may have to cover short positions at a higher price than the short sale price, resulting in a loss, which could be unlimited.

Swaps — A Portfolio may engage in swap transactions. Swap contracts are derivatives in the form of a contract or other similar instrument that is an agreement to exchange the return generated by one instrument for the return generated by another instrument. The payment streams are calculated by reference to a specified security or index and agreed upon notional amount. The term “specified index” includes, but is not limited to, currencies, fixed interest rates, prices and total return on interest rate indices, fixed income indices, total return on equity securities, stock indices and commodity indices (as well as amounts derived from arithmetic operations on these indices).

Temporary Defensive Investments — For temporary defensive purposes in response to adverse market, economic, political or other conditions, each Portfolio (except the Portfolios that seek to track the performance (before fees and expenses) of a particular securities market index) may invest, without limit, in cash, money market instruments or high quality, short-term debt securities, including repurchase agreements. To the extent a Portfolio is invested in these instruments, the Portfolio will not be pursuing its principal investment strategies and may not achieve its investment objective. In addition, each Hybrid Portfolio may vary from its asset allocation targets and target investment percentages for defensive purposes.

U.S. Government Securities — A Portfolio may invest in U.S. government securities, which include direct obligations of the U.S. Treasury (such as Treasury bills, notes or bonds) and obligations issued or guaranteed as to principal and interest (but not as to market value) by the U.S. government or its agencies or instrumentalities. U.S. government securities include mortgage- and asset-backed securities issued or guaranteed by government agencies or government-sponsored enterprises. Other U.S. government securities may be backed by the full faith and credit of the U.S. government or supported primarily or solely by the creditworthiness of the government-related issuer or, in the case of mortgage-backed securities, by pools of assets.

When-Issued Securities, Delayed Delivery Securities and Forward Commitments — A Portfolio may purchase or sell securities that it is entitled to receive on a when-issued basis. A Portfolio may also purchase or sell securities on a delayed delivery basis or through a forward commitment (including on a “TBA” (to be announced) basis). These transactions involve the purchase or sale of securities by a Portfolio at an established price with payment and delivery taking place in the future. A Portfolio enters into these transactions to obtain what is considered an advantageous price to the Portfolio at the time of entering into the transaction.

Zero Coupon and Pay-in-Kind Securities — A Portfolio may invest in zero coupon and pay-in-kind securities. Zero coupon securities are debt securities that do not pay regular interest at regular intervals, but are issued at a discount from face value. The discount approximates the total amount of interest the security will accrue from the date of issuance to maturity. Pay-in-kind securities normally give the issuer an option to pay cash at a coupon payment date or to give the holder of the security a similar security with the same coupon rate and a face value equal to the amount of the coupon payment that would have been made. Convertible securities, corporate debt securities, mortgage- and asset-backed securities, U.S. government securities, foreign securities and other types of debt instruments may be structured as zero coupon or pay-in-kind securities.

Risks

Risk is the chance that you will lose money on your investment or that it will not earn as much as you expect. In general, the greater the risk, the more money your investment can earn for you and the more you can lose. Like other investment companies, the value of each Portfolio's shares may be affected by the Portfolio's investment objective, principal investment strategies and particular risk factors. Each Portfolio follows a distinct set of investment strategies. Consequently, each Portfolio may be subject to different risks. Some of the risks of investing in the Portfolios are discussed below, including the principal risks of the Portfolios as discussed in “About the Portfolios — Investments, Risks, and Performance — Principal Risks.” However, other factors may also affect a Portfolio's investment results. There is no assurance that a Portfolio will achieve its investment objective(s) or that it will not lose value.

As discussed above, to the extent the EQ/American Century Moderate Growth Allocation Portfolio, EQ/Goldman Sachs Growth Allocation Portfolio, or JPMorgan Growth Allocation Portfolio invests in Underlying ETFs that invest primarily in certain types of securities or other instruments (such as equity securities and other equity instruments, fixed income securities and other fixed income instruments, or foreign securities), the performance of the Portfolio will be subject to the risks of investing in such securities or other instruments. The Underlying ETFs have principal investment strategies that come with inherent risks. Certain Underlying ETFs may emphasize different market sectors. Some of the risks, including principal risks of investing in the Underlying ETFs, are discussed below. An Underlying ETF may be subject to certain additional risks as discussed in its prospectus. More information about the Underlying ETFs is available in their respective prospectuses. To the extent the EQ/American Century Moderate Growth Allocation Portfolio, EQ/Goldman Sachs Growth Allocation Portfolio, or JPMorgan Growth Allocation Portfolio invests in Underlying ETFs, the return on your investment will be based on the risks and rewards of the Underlying ETFs' investments. In this section, the term “Portfolio” may include the EQ/American Century Moderate Growth Allocation Portfolio, EQ/Goldman Sachs Growth Allocation Portfolio, JPMorgan Growth Allocation Portfolio, an Underlying ETF, or both.

Principal Investment Risks

As indicated in “About the Portfolios — Investments, Risks, and Performance — Principal Risks,” a Portfolio may be subject to the following principal risks. The risks, which are described in alphabetical order and not in order of perceived importance or potential exposure, can negatively affect a Portfolio’s performance.

Asset Allocation Risk — The investment performance of an allocation Portfolio depends upon how its assets are allocated across various asset classes and how its assets are invested within those asset classes. Some asset classes and investments may perform below expectations, or below the securities markets generally, over short and extended periods. The allocation strategies used and the allocation and investment decisions made could cause a Portfolio to lose value, may not produce the desired results, or may cause a Portfolio’s results to lag relevant benchmarks or other portfolios with similar investment objectives. For example, weighting equity securities too heavily during a period of stock market decline may result in a failure to preserve capital. Conversely, weighting debt securities too heavily during a period of stock market appreciation may result in lower total return. In addition, the allocation and investment decisions made may not be timely relative to market, economic or other developments. Moreover, if a Portfolio has set limitations on the amount of assets that normally may be allocated to each asset class, the Portfolio will have less flexibility in its investment strategy than portfolios that are not subject to such limitations.

Cash Management Risk — Upon entering into certain derivatives contracts, such as futures contracts, and to maintain open positions in certain derivatives contracts, a Portfolio may be required to post collateral for the contract, the amount of which may vary. In addition, a Portfolio may maintain cash and cash equivalent positions as part of the Portfolio’s strategy in order to take advantage of investment opportunities as they arise, to manage the Portfolio’s market exposure, and for other portfolio management purposes. As such, a Portfolio may maintain cash balances, including foreign currency balances, which may be significant, with counterparties such as the Trust’s custodian or its affiliates. Maintaining larger cash and cash equivalent positions could negatively affect a Portfolio’s performance due to missed investment opportunities and may also subject a Portfolio to additional risks, such as increased credit risk with respect to the custodian bank holding the assets and the risk that a counterparty may be unable or unwilling, or perceived (whether by market participants, ratings agencies, pricing services or otherwise) as unable or unwilling, to honor its obligations, and increased costs, such as any fees imposed for large cash balances.

Collateralized Debt (Loan) Obligations Risk — Investments in collateralized debt obligations (“CDOs”) involve many of the same risks associated with investments in debt securities and asset-backed securities, including interest rate risk, credit risk, liquidity risk, prepayment and extension risk, and valuation risk. The risks of an investment in a CDO also depend largely on the quality and type of the collateral and the class or “tranche” of the CDO in which a Portfolio invests. An investment in a junior tranche is subject to a greater risk of depreciation or loss than an investment in a more senior tranche. Normally, collateralized bond obligations, collateralized loan obligations, and other CDOs are privately offered and sold, and thus are not registered under the securities laws. As a result, investments in CDOs may be characterized by a Portfolio as illiquid securities; however, an active dealer market, or other relevant measures of liquidity, may exist for CDOs allowing a CDO potentially to be deemed liquid under a Portfolio’s liquidity policies. Additionally, CDOs carry risks including, but not limited to: (a) the possibility that distributions from collateral securities will not be adequate to make interest or other payments; (b) the risk that the collateral securities may decline in value or quality or be downgraded or go into default, particularly during periods of economic downturn; (c) the possibility that a Portfolio may invest in CDOs that are subordinate to other classes; (d) the risk that the manager of the CDOs may perform poorly; and (e) the risk that the complex structure of CDOs may produce disputes with the issuer or unexpected investment results. CDOs also can be difficult to value and may be highly leveraged (which could make them highly volatile), and the use of CDOs may result in losses to a Portfolio. CDOs also may charge management and other administrative fees, which are in addition to those of a Portfolio.

Convertible Securities Risk — A convertible security is a form of hybrid security; that is, a security with both debt and equity characteristics. The value of a convertible security fluctuates in relation to changes in interest rates and the credit quality of the issuer and also fluctuates in relation to changes in the price of the underlying common stock. A convertible security tends to perform more like a stock when the underlying stock price is high relative to the conversion price (because more of the security’s value resides in the option to convert) and more like a debt security when the underlying stock price is low relative to the conversion price (because the option to convert is less valuable). Because its value can be influenced by many different factors, a convertible security generally is not as sensitive to interest rate changes as a similar non-convertible debt security, and generally has less potential for gain or loss than the underlying stock. A convertible security may be subject to redemption at the option of the issuer at a price established in the convertible security’s governing instrument, which may be less than the current market price of the security. If a convertible security held by a Portfolio is called for redemption, the Portfolio will be required to permit the issuer to redeem the security, convert it into the underlying common stock, or sell it to a third party. Investments by a Portfolio in convertible debt securities may not be subject to any ratings restrictions, but a Portfolio’s investment manager will consider ratings, and any changes to ratings, in its determination of whether the Portfolio should invest in and/or continue to hold the securities. Convertible securities are subject to equity risk, interest rate risk, and credit risk and are often lower-quality securities. Lower quality may lead to greater volatility in the price of a security and may negatively affect a security’s liquidity. Since it derives a portion of its value from the common stock

into which it may be converted, a convertible security is also subject to the same types of market and issuer-specific risks that apply to the underlying common stock. Convertible securities are normally “junior” securities, which means an issuer usually must pay interest on its non-convertible debt securities before it can make payments on its convertible securities. If an issuer stops making interest or principal payments, these securities may become worthless and a Portfolio could lose its entire investment. In the event of a liquidation of the issuing company, holders of convertible securities may be paid before the company’s common stock holders but after holders of any senior debt obligations of the company. To the extent a Portfolio invests in securities that may be considered “enhanced” convertible securities, some or all of these risks may be more pronounced.

Credit Risk — A Portfolio is subject to the risk that the issuer or the guarantor (or other obligor, such as a party providing insurance or other credit enhancement) of a fixed income security, or the counterparty to a derivatives contract, repurchase agreement, loan of portfolio securities or other transaction, is unable or unwilling, or is perceived (whether by market participants, ratings agencies, pricing services or otherwise) as unable or unwilling, to make timely interest and/or principal payments or otherwise honor its obligations, or defaults completely, which may cause the Portfolio’s holdings to lose value. Securities are subject to varying degrees of credit risk, which are often reflected in their credit ratings. Generally, the longer the maturity and the lower the credit quality of a security, the more sensitive it is to credit risk. Higher credit ratings correspond to lower perceived credit risk, and lower credit ratings correspond to higher perceived credit risk. However, rating agencies may fail to make timely changes to credit ratings in response to subsequent events and a credit rating may become stale in that it fails to reflect changes in an issuer’s financial condition. Credit ratings also may be influenced by conflicts of interest. Credit ratings represent a rating agency’s opinion regarding the quality of a security and are not a guaranty of quality. Credit ratings do not protect against a decline in the value of a security. The downgrade of a security’s credit rating may decrease its value. Lower credit quality (or changes in the market’s perception of an issuer’s creditworthiness) also may lead to greater volatility in the price of a security and may negatively affect a security’s liquidity. The credit quality of a security can deteriorate suddenly and rapidly. A Portfolio may experience a significant or complete loss on a fixed income security or a transaction. Rising or high interest rates may deteriorate the credit quality of an issuer or counterparty, particularly if the issuer or counterparty faces challenges rolling or refinancing its obligations. When a fixed income security is not rated, an investment manager may have to assess the risk of the security itself. In addition, legislation and regulations to reform rating agencies could adversely impact a Portfolio’s investments or investment process.

Derivatives Risk — A derivative instrument is generally an investment contract the value of which depends upon (or is derived from), in whole or in part, the value of an underlying asset, reference rate, index or event (e.g., stocks, bonds, commodities, currencies, interest rates and market indexes). A Portfolio’s investments in derivatives may rise or fall in value more rapidly than other investments and may reduce the Portfolio’s returns and increase the volatility of the Portfolio’s net asset value. Examples of derivative instruments include, among others, forward contracts, futures contracts, options contracts, options on futures contracts, and swaps. Particular derivative instruments that a Portfolio may use are described under “Investments, Risks, and Performance – Principal Investment Strategy” in this Prospectus. The following provides a more general discussion of important risk factors (e.g., counterparty and credit risk, leveraging risk, liquidity risk, management risk, market and interest rate risk, valuation risk, and other risks) relating to all derivative instruments that a Portfolio may use. A discussion of additional risks associated with particular derivative instruments follows the general discussion, and particular derivative instruments are discussed in more detail under “Additional Investment Strategies and Risks” in the Statement of Additional Information.

Counterparty and Credit Risk — A Portfolio may be exposed to losses if the counterparty in the transaction is unable or unwilling to fulfill its contractual obligation. Counterparty risk may arise because of market activities and developments, the counterparty’s financial condition (including financial difficulties, bankruptcy, or insolvency), or other reasons. To the extent a Portfolio has significant exposure to a single counterparty or small group of counterparties, this risk will be particularly pronounced. In addition, derivatives traded over-the-counter that are uncleared do not benefit from the protections provided by exchanges and central counterparties (derivatives clearing organizations and clearing corporations) in the event that a counterparty is unable or unwilling to fulfill its contractual obligation. Such uncleared over-the-counter derivatives therefore involve greater counterparty and credit risk and may be more difficult to value than exchange-traded derivatives that are cleared by a central counterparty.

Leveraging Risk — Derivatives may be leveraged such that a small investment can have a significant impact on a Portfolio’s exposure to stock market values, interest rates, currency exchange rates or other investments. As a result, a relatively small price movement in a derivatives contract may cause an immediate and substantial loss or gain, and a Portfolio could lose more than the amount it invested. A Portfolio may experience leveraging risk in connection with investments in derivatives because its investments in derivatives may be small relative to the investment exposure assumed, leaving more assets to be invested in other investments. Such investments may have the effect of leveraging a Portfolio because the Portfolio may experience gains or losses not only on its investments in derivatives, but also on the investments purchased with the remainder of the assets. If the value of a Portfolio’s investments in derivatives is increasing, this could be offset by declining values of the Portfolio’s other investments. Conversely, it is possible that a rise in the value of a Portfolio’s non-derivative investments could be offset by a decline

in the value of the Portfolio's investments in derivatives. In either scenario, a Portfolio may experience losses. In a market where the value of a Portfolio's investments in derivatives is declining and the value of its other investments is declining, the Portfolio may experience substantial losses. Some derivatives can have the potential for unlimited losses, regardless of the size of the initial investment.

Liquidity Risk — It may be difficult or impossible for a Portfolio to purchase or sell certain derivatives in sufficient amounts to achieve the desired level of exposure, which may result in a loss or may be costly to the Portfolio. In addition, the possible lack of a liquid secondary market for certain derivatives, and the resulting inability of a Portfolio to sell or otherwise close out a derivatives position, could expose the Portfolio to losses and could make such derivatives more difficult for the Portfolio to value accurately.

Management Risk — Derivative products are highly specialized instruments. Investing in derivatives involves investment techniques and risk analyses different from, and risks in some respects greater than, those associated with investing in more traditional investments, such as stocks and bonds. The use of a derivative requires an understanding not only of the underlying asset, reference rate, index or event, but also of the derivative itself, without the benefit of observing the performance of the derivative under all possible market conditions.

Market and Interest Rate Risk — Some derivatives are more sensitive to market price fluctuations and to interest rate changes than other investments. The successful use of derivatives will usually depend on the Adviser's or a Sub-Adviser's ability to accurately forecast movements in the market relating to the underlying asset, reference rate, index or event. If the Adviser or a Sub-Adviser does not predict correctly the direction of asset prices, interest rates and other economic factors, a Portfolio's derivatives positions could lose value. Derivatives may not behave as anticipated by a Portfolio, especially in abnormal market conditions. Derivatives strategies that are successful under certain market conditions may be less successful or unsuccessful under other market conditions. While some derivatives strategies can reduce the risk of loss, they can also reduce the opportunity for gain or result in losses by offsetting favorable price movements in other Portfolio investments.

Valuation Risk — Derivatives also may be subject to the risk of mispricing or improper valuation, and valuation may be more difficult in times of market turmoil. Improper valuations can result in increased cash payment requirements to counterparties or a loss of value to a Portfolio. Changes in the value of a derivative may not correlate perfectly, or at all, with the underlying asset, reference rate or index.

Other Risks — Derivatives also may be subject to risks related to potential operational issues, including documentation issues, settlement issues, systems failures, inadequate controls, and human error, as well as legal risks, such as insufficient documentation, the lack of capacity or authority of a counterparty to execute or settle a transaction, or the legality or enforceability of a contract.

When a derivative is used as a hedge against a position that a Portfolio holds, any loss generated by the derivative should generally be offset by gains on the hedged instrument, and vice versa. While hedging can reduce or eliminate losses, it also can reduce or eliminate gains. Hedges are sometimes subject to imperfect matching between the derivative and the hedged investment, and there can be no assurance that a Portfolio's hedging transactions will be effective. Also, suitable derivative transactions may not be available in all circumstances, and there can be no assurance that a Portfolio will engage in derivative transactions to reduce exposure to other risks when that might be beneficial or that, if used, such strategies will be successful.

When a Portfolio uses derivatives, it will likely be required to provide margin or collateral; these practices are intended to satisfy contractual undertakings and regulatory requirements and will not prevent the Portfolio from incurring losses on derivatives. The need to provide margin or collateral could limit a Portfolio's ability to pursue other opportunities as they arise. Derivatives that have margin requirements involve the risk that if a Portfolio has insufficient cash or eligible margin securities to meet daily variation margin requirements, it may have to sell securities or other instruments from its portfolio at a time when it may be disadvantageous to do so. Derivatives also may involve fees, commissions, or other costs that may reduce a Portfolio's gains or exacerbate its losses from the derivatives.

The federal income tax treatment of a derivative may not be as favorable as a direct investment in an underlying asset and may adversely affect the timing, character and amount of income a Portfolio realizes from its investments. In addition, certain derivatives are subject to mark-to-market or straddle provisions of the Internal Revenue Code. The federal income tax treatment of certain derivatives, such as swaps, is unsettled and may be subject to future legislation, regulation or administrative pronouncements issued by the Internal Revenue Service.

Legislative and regulatory developments may limit the availability of certain derivatives, may reduce the attractiveness or increase the cost of derivatives, and may otherwise adversely impact the performance and value of derivatives. Legislative and regulatory developments also may change the way in which a Portfolio itself is regulated. Such developments may impact a Portfolio's ability

to invest, or remain invested, in certain derivatives, adversely affect a Portfolio's ability to achieve its investment objective, and adversely affect a Portfolio's efficiency in implementing its investment strategies. Complying with new requirements also may increase the cost of a Portfolio's investments and the cost of implementing a Portfolio's investment program and related operations, which could adversely affect a Portfolio and its investors. For example, the SEC has adopted requirements and restrictions governing registered funds' (including the Portfolios') use of derivatives ("Rule 18f-4"). The Portfolios have implemented policies and procedures to comply with Rule 18f-4. Unless a Portfolio limits its derivatives exposure to 10% or less of its net assets and qualifies as a "limited derivatives user" under Rule 18f-4, the rule, among other things, requires that the Portfolio establish a derivatives risk management program, comply with certain value-at-risk based leverage limits, appoint a derivatives risk manager, and provide additional disclosure both publicly and to the SEC regarding its derivatives positions. If a Portfolio qualifies as a limited derivatives user, Rule 18f-4 requires the Portfolio to implement policies and procedures reasonably designed to manage its derivatives risk. The requirements of Rule 18f-4 are intended to reduce derivatives risk, but they may not work as intended. Analyses, judgments and decisions made in connection with administering the derivatives risk management program may be incorrect or otherwise may not produce the desired results. In addition, changes in market conditions, which may occur rapidly and unpredictably, may adversely affect the administration of the program.

A discussion of additional risks associated with particular derivative instruments follows:

Forward Contract Risk — There are no limits on daily price fluctuations of forward contracts. Changes in foreign exchange regulations by governmental authorities might limit the trading of forward contracts on currencies. There have been periods during which certain counterparties have refused to continue to quote prices for forward contracts or have quoted prices with an unusually wide spread (i.e., the difference between the price at which the counterparty is prepared to buy and the price at which it is prepared to sell).

Futures Contract Risk — There can be no assurance that a liquid market will exist for any particular futures contract at any particular time. Exchanges may establish daily price fluctuation limits for futures contracts and may halt trading if a contract's price moves upward or downward more than the limit in a given day. On volatile trading days when the price fluctuation limit is reached or a trading halt is imposed, it may be impossible to enter into new positions or close out existing positions. If the market for a contract is not liquid because of price fluctuation limits or other market conditions, it could prevent prompt liquidation of unfavorable positions, and potentially could require a Portfolio to continue to hold a position until delivery or expiration regardless of changes in its value. As a result, a Portfolio's access to other assets held to cover its futures positions could also be impaired.

Options Contract Risk — There can be no guarantee that the use of options will increase a Portfolio's return or income. By writing (selling) a put option, a Portfolio takes on the risk of a decline in the value of the underlying instrument, including the possibility of a loss up to the entire strike price of the option it sells, but without the corresponding opportunity to benefit from a potential increase in the value of the underlying instrument. When a Portfolio writes a put option, it assumes the risk that it must purchase the underlying instrument at a strike price that may be higher than the market price of the instrument. If there is a broad market decline and a Portfolio is not able to close out its written put options, it may result in substantial losses to the Portfolio. By writing (selling) a call option, a Portfolio assumes the risk that it must sell the underlying instrument at a strike price that may be lower than the market price of the instrument. When a Portfolio writes a covered call option, it gives up the opportunity to profit from a price increase in the underlying instrument above the strike price. If a call option that a Portfolio has written is exercised, the Portfolio will experience a gain or loss from the sale of the underlying instrument, depending on the price at which the Portfolio purchased the instrument and the strike price of the option. A Portfolio will receive a premium from writing options, but the premium received may not be sufficient to offset any losses sustained from exercised options. If a call option that a Portfolio has written expires unexercised, the Portfolio will experience a gain in the amount of the premium it received; however, that gain may be offset by a decline in the market value of the underlying instrument during the option period. If an option that a Portfolio has purchased is never exercised or closed out, the Portfolio will lose the amount of the premium it paid and the use of those funds.

Swaps Risk — Swap transactions generally do not involve delivery of reference instruments or payment of the notional amount of the contract. Accordingly, the risk of loss with respect to swaps generally is limited to the net amount of payments that a Portfolio is contractually obligated to make or, in the case of the other party to a swap defaulting, the net amount of payments that a Portfolio is contractually entitled to receive. As a seller of a credit default swap, a Portfolio effectively adds economic leverage because, in addition to its total net assets, the Portfolio is subject to investment exposure on the entire notional amount of the contract. See "Leveraging Risk" above. Additionally, holding a position in a credit default swap could result in losses if a Portfolio does not correctly evaluate the creditworthiness of the company on which the credit default swap is based. Some swaps are now executed through an organized exchange or regulated facility and cleared through a regulated clearing organization. The absence of an organized exchange or market for certain swap transactions may result in difficulties in trading and valuation, especially in the event of market disruptions. The use of an organized exchange or market for swap transactions is expected to result in swaps being easier to trade or value, but this may not always be the case.

Dividend Risk — Dividends received on common stocks are not fixed but are paid at the discretion of an issuer's board of directors. There is no guarantee that the companies in which a Portfolio invests will pay dividends in the future or that dividends, if paid, will remain at current levels or increase over time. Securities that pay dividends may be sensitive to changes in interest rates, and as interest rates rise or fall, the prices of such securities may be impacted. A sharp rise in interest rates, an economic downturn, or other market or company-specific developments, could result in a company's decision to decrease or eliminate a dividend. During a broad market advance, securities that pay dividends may not appreciate as much as securities that do not pay dividends.

Dollar Roll and Sale-Buyback Transactions Risk — Dollar roll and sale-buyback transactions may increase a Portfolio's volatility and may be viewed as a form of leverage. There is also a risk that the counterparty will be unable or unwilling to complete the transaction as scheduled, which may result in losses to a Portfolio.

Energy Sector Risk — The energy markets have experienced significant volatility in recent periods. The energy sector is cyclical and highly dependent on commodities prices. The market values of companies in the energy sector may fluctuate widely and could be adversely affected by, among other factors, the levels and volatility of global energy prices, commodity price volatility, energy supply and demand, changes in exchange rates and interest rates, imposition of import controls, increased competition, capital expenditures on and the success of exploration and production, depletion of resources, development of alternative energy sources and energy conservation efforts, technological developments, cybersecurity incidents, tax treatment, labor relations, and the economic growth and stability of the key energy-consuming countries. Companies in this sector are subject to substantial government regulation and contractual fixed pricing, which may increase the cost of business and limit these companies' earnings, and a significant portion of their revenues depends on a relatively small number of customers, including governmental entities and utilities. As a result, governmental budget constraints may have a material adverse effect on the stock prices of companies in this industry. Energy companies may also operate in or engage in transactions involving countries with less developed regulatory regimes or a history of expropriation, nationalization or other adverse policies. Energy companies also face a significant risk of liability from accidents resulting in injury or loss of life or property, pollution or other environmental mishaps, equipment malfunctions or mishandling of materials and a risk of loss from terrorism, political strife, natural disasters or other catastrophes. Any such event could result in a material adverse impact to a Portfolio's holdings and the performance of a Portfolio. In addition, there is growing political pressure to reduce the use of fossil fuels, which could begin to impact the securities of companies in the fossil fuel industry and the prices of related commodities. The value of a Portfolio's shares could experience significantly greater volatility than the value of shares of portfolios investing more broadly.

Equity Risk — In general, the values of stocks and other equity securities fluctuate, and sometimes widely fluctuate, in response to changes in a company's financial condition as well as general market, economic and political conditions and other factors. Stock markets tend to run in cycles, with periods when stock prices generally go up and periods when stock prices generally go down. However, stock markets also can move up and down rapidly and unpredictably. Equity securities generally have greater price volatility than fixed-income securities. A Portfolio may experience a significant or complete loss on its investment in an equity security. Regardless of where a company is organized or its stock is traded, its performance may be significantly affected by events in regions from which it derives its profits or in which it conducts significant operations. In addition, common stock prices may be particularly sensitive to rising interest rates, which increase borrowing costs and the costs of capital. In the event of liquidation, equity securities are generally subordinate in rank to debt and other securities of the same issuer.

ESG Considerations Risk — Consideration of environmental, social and governance ("ESG") factors in the investment process may limit the types and number of investment opportunities available to a Portfolio and, therefore, carries the risk that, under certain market conditions, the Portfolio may underperform funds that do not consider ESG factors or use a different methodology to identify and/or integrate ESG factors. The integration of ESG considerations may affect a Portfolio's exposure to certain sectors or types of investments and may impact a Portfolio's relative investment performance depending on whether such sectors or investments are in or out of favor in the market. Furthermore, ESG criteria are not uniformly defined, and a Portfolio's ESG criteria may differ from those used by other funds. A company's ESG performance or the Sub-Adviser's assessment of a company's ESG performance may change over time, which could cause a Portfolio temporarily to hold securities that do not comply with the Portfolio's ESG investment principles. Information or data used in evaluating a company, may not be complete, accurate or readily available, which could cause the Sub-Adviser to incorrectly assess a company's ESG performance. Socially responsible norms differ by region, and an issuer's ESG practices or the Sub-Adviser's assessment of an issuer's ESG practices may change over time. Successful application of a Portfolio's ESG considerations will depend on the Sub-Adviser's skill in properly identifying and analyzing material ESG issues, and there can be no assurance that the considerations or techniques employed will be successful. While the Sub-Adviser views ESG considerations as having the potential to contribute to a Portfolio's long-term performance, there is no guarantee that such results will be achieved. There is also a risk that a Portfolio could have indirect exposure (through, including but not limited to, derivatives and investments in other investment companies) to issuers that do not meet the relevant ESG criteria used by the Portfolio. In addition, investors may differ in their views of what constitutes positive or negative ESG characteristics of a security. ESG investing is qualitative and subjective by nature, and there is no guarantee that the factors utilized by the Sub-Adviser or any judgment exercised by the

Sub-Adviser will reflect the opinions of any particular investor, and the factors utilized by the Sub-Adviser may differ from (or may be considered to be more or less stringent than) the factors that any particular investor considers relevant in evaluating an issuer's ESG practices. Further, the regulatory landscape for ESG investing in the United States and abroad is evolving, and future rules or regulations may require a Portfolio to change its investment process and/or the associated disclosures.

Exchange-Traded Funds ("ETFs") Risk — When a Portfolio invests in an ETF, it will indirectly bear its proportionate share of the fees and expenses incurred by the ETF. These fees and expenses are in addition to the advisory fees and other expenses that a Portfolio and its shareholders bear directly in connection with the Portfolio's own operations. As a result, a Portfolio's shareholders will be subject to two layers of fees and expenses with respect to investments in the Portfolio. The cost of investing in a Portfolio, therefore, may be higher than the cost of investing in a mutual fund that invests directly in individual stocks and bonds. In addition, a Portfolio's net asset value will be subject to fluctuations in the market values of the ETFs in which it invests. A Portfolio is also subject to the risks associated with the securities or other investments in which the ETFs invest, and the ability of the Portfolio to meet its investment objective will directly depend on the ability of the ETFs to meet their investment objectives. The extent to which the investment performance and risks associated with a Portfolio correlate to those of a particular ETF will depend upon the extent to which the Portfolio's assets are allocated from time to time for investment in the ETF, which will vary. A Portfolio does not control the investments of the ETFs, which may have different investment objectives and may engage in investment strategies that the Portfolio would not engage in directly. The ETFs may change their investment objectives or policies without the approval of a Portfolio. If that were to occur, the Portfolio might be forced to sell its investment in an ETF at a time and price that is unfavorable to the Portfolio.

In addition, many ETFs invest in securities included in, or representative of, underlying indexes regardless of investment merit or market trends and, therefore, these ETFs do not change their investment strategies to respond to changes in the economy, which means that such an ETF may be particularly susceptible to a general decline in the market segment relating to the relevant index. Imperfect correlation between an ETF's securities and those in the index it seeks to track, rounding of prices, changes to the indices and regulatory policies may cause an ETF's performance not to match the performance of its index. An ETF's use of a representative sampling approach will result in its holding a smaller number of securities than are in the index it seeks to track. As a result, an adverse development respecting an issuer of securities held by the ETF could result in a greater decline in net asset value than would be the case if the ETF held all of the securities in the index. To the extent the assets in the ETF are smaller, these risks will be greater. No ETF fully replicates its index, and an ETF may hold securities not included in its index. Therefore, there is a risk that the investment strategy of the ETF manager may not produce the intended results. In addition, an actively managed ETF's performance will reflect the ETF manager's ability to make investment decisions that are suited to achieving the ETF's investment objective.

Moreover, there is the risk that an ETF may value certain securities at a price higher than the price at which it can sell them. Secondary market trading in shares of ETFs may be halted by a national securities exchange because of market conditions or for other reasons. In addition, trading in these shares is subject to trading halts caused by extraordinary market volatility pursuant to "circuit breaker" rules. There can be no assurance that the requirements necessary to maintain the listing of the shares will continue to be met or will remain unchanged. In addition, although ETFs are listed for trading on national securities exchanges, certain foreign exchanges and in over-the-counter markets, there can be no assurance that an active trading market for such shares will develop or be maintained, in which case the liquidity and value of a Portfolio's investment in the ETFs could be substantially and adversely affected. In addition, because ETFs are traded on these exchanges and in these markets, the purchase and sale of their shares involve transaction fees and commissions. The market price of an ETF may be different from the net asset value of such ETF (i.e., an ETF may trade at a discount or premium to its net asset value). The performance of a Portfolio that invests in such an ETF could be adversely impacted.

Focused Portfolio Risk — A Portfolio that invests in the securities of a limited number of companies may incur more risk because changes in the value of a single security may have a more significant effect, either positive or negative, on the Portfolio's net asset value and, as a result, the Portfolio may experience greater performance volatility than a Portfolio that is more broadly invested.

Foreign Securities Risk — Investments in foreign securities, including depositary receipts, involve risks not associated with, or more prevalent than those that may be associated with, investments in U.S. securities. The economies of certain foreign markets may not compare favorably with the economy of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources and balance of payments position. Over a given period of time, foreign securities may underperform U.S. securities — sometimes for years. A Portfolio could also underperform if it invests in countries or regions whose economic performance falls short. Foreign markets may be less liquid, more volatile and subject to less government supervision and regulation than U.S. markets, and it may take more time to clear and settle trades involving foreign securities. Security values also may be negatively affected by changes in the exchange rates between the U.S. dollar and foreign currencies. Differences between U.S. and foreign legal, political and economic systems, regulatory regimes and market practices, as well as changes in international trading patterns, trade barriers and other protectionist trade policies (including those of the United States), governmental instability, acts of terrorism, war or other open conflicts, or other political, diplomatic or economic actions or factors, also may adversely impact security values. Foreign securities are also subject to the risks associated with the potential imposition of economic or other sanctions against a particular foreign country, its nationals, businesses or industries. The costs of buying and selling foreign securities, including taxes, brokerage and custody costs,

generally are higher than the costs of buying and selling domestic securities. World markets, or those in a particular region, may all react in similar fashion to important economic, political or other developments. Events and evolving conditions in certain economies or markets may alter the risks associated with investments tied to countries or regions that historically were perceived as comparatively stable and make such investments riskier and more volatile. In addition, securities issued by U.S. entities with substantial foreign operations or holdings can involve risks relating to conditions in foreign countries. Regardless of where a company is organized or its stock is traded, its performance may be significantly affected by events in regions from which it derives its profits or in which it conducts significant operations.

Currency Risk — Investments in foreign currencies and in securities that trade in, or receive revenues in, or in derivatives that provide exposure to foreign currencies are subject to the risk that those currencies will decline in value relative to the U.S. dollar. Any such decline may erode or reverse any potential gains from an investment in securities denominated in foreign currency or may widen existing loss. To the extent a Portfolio invests or hedges based on the perceived relationship between two currencies, there is a risk that the correlation between those currencies may not behave as anticipated. Currency rates may fluctuate significantly over short periods of time and can be affected unpredictably by a number of factors, including changes in interest rates; intervention (or the failure to intervene) by U.S. or foreign governments, central banks or supranational entities; investor perception of a country's economy; or the imposition of currency controls or other political developments in the United States or abroad. Currency exchange rates may fluctuate in response to factors external to a country's economy, which makes the forecasting of currency market movements extremely difficult. Currency risk may be particularly high to the extent that a Portfolio invests in foreign securities or currencies that are economically tied to emerging market countries.

Depository Receipts Risk — Investments in depository receipts (including American Depositary Receipts, European Depositary Receipts and Global Depositary Receipts) involve many of the same risks associated with investing directly in foreign securities, including the economic and political risks associated with the underlying issuer's country. In addition, the underlying issuers of certain depository receipts, particularly unsponsored or unregistered depository receipts, are under no obligation to distribute shareholder communications to the holders of such receipts or to pass through to them any voting rights with respect to the deposited securities. A Portfolio may therefore receive less timely information or have less control than if it invested directly in the foreign issuer. Depository receipts are subject to the risk of fluctuation in the currency exchange rate if, as is often the case, the underlying foreign securities are denominated in foreign currency, and there may be an imperfect correlation between the market value of depository receipts and the underlying foreign securities. Certain countries may limit the ability to convert a depository receipt into the underlying foreign security and vice versa, which may cause the securities of the foreign company to trade at a discount or premium to the market price of the related depository receipts. In some cases, if a Portfolio, as the holder of a depository receipt, is compelled to convert the depository receipt into the underlying foreign security but is unable successfully to complete the conversion, the depository receipt could be rendered worthless and the Portfolio could lose its entire investment.

Emerging Markets Risk — Emerging market countries generally are located in Asia, the Middle East, Eastern Europe, Central and South America, and Africa. There are greater risks and uncertainties involved in investing in emerging market countries and/or their securities markets, and investments in these countries and/or markets are more susceptible to loss than investments in developed countries and/or markets. Investments in these countries and/or markets may present market, credit, currency, liquidity, legal, political, technical and other risks different from, or greater than, the risks of investing in developed countries. For instance, these countries may be more likely than developed countries to experience rapid and significant adverse developments in their political, economic or social structures or intervene in or manipulate financial markets. Some emerging market countries restrict foreign investments, impose high withholding or other taxes on foreign investments, impose restrictive exchange control regulations, or may nationalize or expropriate the assets of private companies. Therefore, a Portfolio may be limited in its ability to make direct or additional investments in an emerging market country or could lose the entire value of its investment in the affected market. Such restrictions also may have negative impacts on transaction costs, market price, and investment returns. The U.S. government also may impose restrictions on the ability of U.S. investors to hold and/or acquire securities of certain companies in emerging market countries, which may adversely impact a Portfolio.

In addition, companies in emerging market countries may be newly organized, smaller and less seasoned, and the securities markets of emerging market countries generally are smaller, less liquid and more volatile than those of developed countries. Shareholder claims and legal remedies that are common in the United States may be difficult or impossible to pursue in many emerging market countries. In addition, due to jurisdictional limitations, matters of comity and various other factors, U.S. authorities may be limited in their ability to bring enforcement actions against non-U.S. companies and non-U.S. persons in certain emerging market countries. Emerging market countries often have less uniformity in (or may lack) regulatory, accounting, auditing and financial reporting requirements or standards, which may impact the availability and quality of information about issuers; less reliable clearance and settlement procedures, which may be unable to keep pace with the volume of securities transactions or otherwise make it difficult to engage in such transactions; and less reliable registration and custodial procedures, which could result in ownership registration being completely lost. There are generally higher commission rates on foreign portfolio transactions,

transfer taxes, and higher custodial costs. A Portfolio may not know the identity of trading counterparties, which may increase the possibility of the Portfolio not receiving payment or delivery of securities in a transaction. Emerging market countries also may be subject to high inflation and rapid currency devaluations, and currency-hedging techniques may be unavailable in certain emerging market countries. In addition, some emerging market countries may be heavily dependent on international trade, which can materially affect their securities markets. Certain emerging market countries are among the largest debtors to commercial banks and foreign governments. At times, certain emerging market countries have declared moratoria on the payment of principal and interest on external debt. Certain emerging market countries have experienced difficulties in servicing their sovereign debt on a timely basis, which has led to defaults and the restructuring of certain indebtedness. Investments in frontier markets may be subject to greater levels of these risks than investments in more developed and traditional emerging markets.

Over the last few decades, the Chinese government has undertaken reform of economic and market practices and has expanded the sphere of private ownership in China. However, Chinese markets generally continue to experience inefficiency, volatility and pricing anomalies resulting from governmental influence, a lack of publicly available information and/or political and social instability. Internal social unrest or confrontations with other countries, including military conflicts in response to such events, may also disrupt economic development in China. Reduced spending on Chinese products and services, which may result in substantial price reductions of goods and services and possible failure of individual companies and/or large segments of China's export industry; institution of additional tariffs or other trade barriers, including as a result of heightened trade or other tensions between China and the United States or other countries; or a downturn in any of the economies of China's key trading partners, may have an adverse impact on the Chinese economy. China has experienced security concerns, such as terrorism and strained international relations, and China is alleged to have participated in state-sponsored cyberattacks against foreign companies and foreign governments. Actual and threatened responses to such activity, including purchasing restrictions, sanctions, tariffs or cyberattacks on the Chinese government or Chinese companies, may impact China's economy and Chinese issuers of securities. In the long run, China's ability to develop and sustain a credible legal, regulatory, monetary, and socioeconomic system could influence the course of outside investment.

A Portfolio may obtain exposure to companies based or operated in China by investing through legal structures known as variable interest entities (VIEs). Instead of directly owning the equity securities of a Chinese company, a VIE enters into service and other contracts with the Chinese company. Although the VIE has no equity ownership of the Chinese company, the contractual arrangements permit the VIE to consolidate the Chinese company into its financial statements. Intervention by the Chinese government with respect to VIEs could significantly affect the Chinese company's performance and the enforceability of the VIE's contractual arrangements with the Chinese company. If these risks materialize, the VIEs could be adversely affected and a Portfolio could incur significant losses with no recourse available

European Economic Risk — The European Union's (the "EU") Economic and Monetary Union requires member countries to comply with restrictions on interest rates, deficits, debt levels, and inflation rates, and other factors, each of which may significantly impact every European country and their economic partners. The economies of EU member countries and their trading partners may be adversely affected by changes in the exchange rate of the euro (the common currency of the EU), changes in EU or governmental regulations on trade and other areas, geopolitical and other events, including acts of terrorism, tensions, war or other open conflicts, and the threat of default or an actual default by an EU member country on its sovereign debt, which could negatively impact a Portfolio's investments and cause it to lose money. In recent years, the European financial markets have been negatively impacted by concerns relating to rising government debt levels and national unemployment; possible default on or restructuring of sovereign debt in several European countries; and economic downturns. Responses to financial problems by European governments, central banks and others, including austerity measures and reforms, may not produce the desired results, may result in social unrest and may limit future growth and economic recovery or have other unintended consequences. A European country's default or debt restructuring would adversely affect the holders of the country's debt and sellers of credit default swaps linked to the country's creditworthiness and could negatively impact global markets more generally.

Events in Europe may adversely affect the euro's exchange rate and value and may continue to impact the economies of every European country and their economic partners. The ongoing Russia-Ukraine conflict, the resulting responses by the United States and other countries, and the potential for wider conflict have had, and could continue to have, severe adverse effects on regional and global economies and could further increase volatility and uncertainty in the financial markets. For example, exports in Eastern Europe have been disrupted for certain key commodities, pushing commodity prices to record highs, and energy prices in Europe have increased significantly. In addition, uncertainties regarding the viability of the EU have impacted and may continue to impact regional and global markets. There are ongoing concerns regarding the economies of certain European countries and/or their sovereign debt following the United Kingdom's withdrawal from the EU, commonly referred to as "Brexit". Any further withdrawals from the EU (or the possibility of such withdrawals or the dissolution of the EU) could cause additional and significant regional and global market disruption, introduce new legal and regulatory uncertainties, and result

in increased volatility and illiquidity and potentially lower economic growth, all of which may negatively impact a Portfolio's investments and cause it to lose money. Further, the national politics of European countries have been unpredictable and subject to influence by disruptive political groups. European governments may be subject to change and European countries may experience social and political unrest. Unanticipated or sudden political or social developments may result in sudden and significant investment losses.

Geographic Focus Risk — To the extent that a Portfolio invests a significant portion of its assets in securities of companies domiciled, or exercising the predominant part of their economic activity, in one country or geographic region, the Portfolio assumes the risk that economic, political, social and environmental conditions in that particular country or region will have a significant impact on the Portfolio's investment performance and that the Portfolio's performance will be more volatile than the performance of more geographically diversified portfolios. From time to time, a small number of companies and industries may represent a large portion of the market in a particular country or region, and these companies and industries can be sensitive to adverse economic, political, social, currency, or regulatory developments. In addition, certain areas are prone to natural disasters such as earthquakes, volcanoes, fires, droughts, floods, hurricanes or tsunamis, and are economically sensitive to environmental events. The risks associated with investing in a narrowly defined geographic area also are generally more pronounced with respect to investments in emerging market countries.

International Fair Value Pricing Risk — A Portfolio that invests in foreign securities is subject to the risk that its share price may be exposed to arbitrage attempts by investors seeking to capitalize on differences in the values of foreign securities trading on foreign exchanges that may close before the time the Portfolio's net asset value is determined. If such arbitrage attempts are successful, the Portfolio's net asset value might be diluted. A Portfolio's use of fair value pricing in certain circumstances may help deter such arbitrage activities. The effect of such fair value pricing is that foreign securities may not be priced on the basis of quotations from the primary foreign securities market in which they are traded, but rather may be priced using more subjective methods, known as fair value pricing. As such, it is possible that fair value may differ materially from the value realized on a sale of a foreign security. It is also possible that the use of fair value pricing will limit a Portfolio's ability to implement its investment strategy (e.g., reduce the volatility of the Portfolio's share price) or achieve its investment objective.

Regulatory Risk — Less information may be available about foreign companies. In general, foreign companies are not subject to uniform accounting, auditing and financial reporting standards or to other regulatory practices and requirements as are U.S. companies. Many foreign governments do not supervise and regulate stock exchanges, brokers and the sale of securities to the same extent as does the United States and may not have laws to protect investors that are comparable to U.S. securities laws. In addition, some countries may have legal systems that may make it difficult for a Portfolio to vote proxies, exercise shareholder rights, and pursue legal remedies with respect to its foreign investments.

Settlement Risk — Settlement and clearance procedures in certain foreign markets differ significantly from those in the United States. Foreign settlement and clearance procedures and trade regulations also may involve certain risks (such as delays in payment for or delivery of securities) not typically associated with the settlement of U.S. investments. At times, settlements in certain foreign countries have not kept pace with the number of securities transactions. These problems may make it difficult for a Portfolio to carry out transactions. If a Portfolio cannot settle or is delayed in settling a purchase of securities, it may miss attractive investment opportunities and certain of its assets may be uninvested with no return earned thereon for some period. If a Portfolio cannot settle or is delayed in settling a sale of securities, it may lose money if the value of the security then declines or, if it has contracted to sell the security to another party, the Portfolio could be liable for any losses incurred.

Trade Suspensions Risk — Securities of issuers traded on foreign exchanges may be suspended, including by the issuers themselves, by an exchange, or by governmental authorities. The likelihood of such suspensions may be higher for securities of issuers in emerging or less-developed market countries than in countries with more developed markets. Suspensions may last for significant periods of time, during which trading in the securities and in instruments that reference the securities, such as derivative instruments, may be halted. In the event that a Portfolio holds material positions in such suspended securities or instruments, the Portfolio's ability to liquidate its positions may be compromised and the Portfolio could incur significant losses. Trade suspensions, or other restrictions on trading, and market closures could lead to affected securities being valued at zero.

Health Sciences Companies Risk — Health sciences companies can be adversely affected by, among other things, intense competitive challenges; the need for government approval to offer products and services; product obsolescence; increases or decreases in the cost of or demand for medical products and services; an increased emphasis on outpatient services; pricing pressure (including price discounting); the failure of the issuer to develop new products; product liability or other litigation; price controls imposed by governments; reductions in government funding; and changes in legislation or government regulations, including uncertainty regarding health care reform and how it will be implemented. Health sciences companies are also heavily dependent on patent protections, and the expiration of a company's patent rights may adversely affect that company's profits.

Hedging Risk — If a Portfolio takes a hedging position (such as long or short positions) in a particular currency, security, or bond market, it will lose money if the currency, security, or bond market appreciates in value, or an expected credit event fails to occur. Any efforts at buying or selling currencies could result in significant losses for a Portfolio. Further, foreign currency transactions that are intended to hedge the currency risk associated with investing in foreign securities and protect against the risk of loss that would result from a decline in the value of the hedged currency may also limit any potential gain that might result should the value of such currency increase.

Index Non-Diversification Risk — To the extent that an index Portfolio becomes non-diversified as necessary to approximate the composition of its index, the Portfolio may invest a relatively high percentage of its assets in a limited number of issuers. As a result, the Portfolio's performance will be more vulnerable to changes in market value of a single issuer or group of issuers and more susceptible to risks associated with a single economic, political or regulatory occurrence affecting one or more of these issuers.

Index Strategy Risk — A Portfolio (or a portion thereof) that employs an index strategy generally invests in all of the securities included in (or "replicates") an index or invests in a representative sampling of such securities, regardless of market trends, to seek to track the performance of an unmanaged index of securities, whereas an actively managed Portfolio (or portion thereof) typically seeks to outperform a benchmark index. A Portfolio generally will not modify its index strategy to respond to changes in the economy, which means that it may be particularly susceptible to a general decline in the market segment relating to the relevant index. To the extent that the index has a significant weighting in a particular sector, a Portfolio will be subject to the risks associated with that sector and may experience greater performance volatility than a portfolio that seeks to track the performance of an index that is more broadly diversified. In addition, although the index strategy attempts to closely track the relevant index, a Portfolio may not invest in all of the securities in the index. Also, unlike index performance, a Portfolio's performance will be reduced by its fees and expenses. Cash flow into and out of a Portfolio, portfolio transaction costs, changes in the securities that constitute the index, and the Portfolio's valuation procedures also may affect the Portfolio's performance. Therefore, there can be no assurance that the performance of the index strategy will match or achieve a high degree of correlation to that of the relevant index. Tracking error (that is, the divergence, positive or negative, between the performance of a Portfolio and the relevant index) may cause a Portfolio's performance to be less than expected. To the extent a Portfolio's investments track the relevant index, the Portfolio may underperform other portfolios that invest more broadly. In addition, errors relating to the index may occur from time to time and may not be identified and corrected by the index provider for a period of time or at all, and market or other disruptions could cause delays in the index's rebalancing schedule. Such errors and/or disruptions may result in losses for a Portfolio.

To the extent that the securities of a limited number of companies represent a significant percentage of the relevant index, a Portfolio may be subject to more risk because changes in the value of a single security may have a more significant effect, either positive or negative, on the Portfolio's net asset value. A Portfolio may experience greater performance volatility than a portfolio that seeks to track the performance of an index that is more broadly diversified.

To the extent that a Portfolio utilizes a representative sampling approach, it may experience greater tracking error than it would if the Portfolio sought to replicate the index. A Portfolio's use of a representative sampling approach will result in its holding a smaller number of securities than are in the index it seeks to track. As a result, an adverse development with respect to an issuer of securities held by the Portfolio could result in a greater decline in net asset value than would be the case if the Portfolio held all of the securities in the index.

Inflation-Indexed Bonds Risk — Inflation-indexed bonds are fixed income securities whose principal value is periodically adjusted according to inflation. The value of inflation-indexed bonds is expected to change in response to changes in real interest rates. Real interest rates represent nominal (stated) interest rates reduced by the expected impact of inflation. In general, inflation-indexed bonds, including Treasury inflation-indexed securities, decline in value when real interest rates rise and rise in value when real interest rates decline. In certain interest rate environments, such as when real interest rates are rising faster than nominal interest rates, inflation-indexed bonds may experience greater losses than other fixed income securities with similar durations. Interest payments on inflation-indexed debt securities can be unpredictable and may vary as the principal and/or interest is adjusted for inflation. In periods of deflation, a Portfolio may have no income at all from such investments. The principal value of an investment in a Portfolio is not protected or otherwise guaranteed by the value of the Portfolio's investments in inflation-indexed debt securities.

Information Technology Sector Risk — Investment risks associated with investing in the information technology sector include, in addition to other risks, the intense competition to which information technology companies may be subject; the dramatic and often unpredictable changes in growth rates and competition for qualified personnel among information technology companies; effects on profitability from being heavily dependent on patent and intellectual property rights and the loss or impairment of those rights; rapid product obsolescence due to technological developments and frequent new product introduction; general economic conditions; and increased government and regulatory scrutiny. Any of these factors could result in a material adverse impact on a Portfolio's securities and the performance of a Portfolio.

Infrastructure-Related Issuers Risk — Infrastructure-related companies may be subject to a variety of factors that could adversely affect their business or operations, including high interest costs in connection with capital construction programs, high degrees of leverage, costs associated with governmental, environmental and other regulations, the effects of economic slowdowns, increased competition from other providers of services, uncertainties concerning costs, the level of government spending on infrastructure projects, the effects of natural disasters, and other factors. Infrastructure-related companies may be adversely affected by commodity price volatility, changes in exchange rates, import controls, depletion of resources, technological developments, and labor relations. There is also the risk that corruption may negatively affect publicly funded infrastructure projects, especially in emerging markets, resulting in delays and cost overruns.

Infrastructure issuers can be significantly affected by government spending policies because companies involved in this industry rely to a significant extent on U.S. and other government demand for their products. In addition, infrastructure companies may be adversely affected by government regulation or world events (e.g., expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and repatriation of capital, military coups, social or labor unrest, or violence) in the regions in which the companies operate. Infrastructure companies may have significant capital investments in, or engage in transactions involving, emerging market countries, which may heighten these risks. In addition, the failure of an infrastructure company to carry adequate insurance or to operate its assets appropriately could lead to significant losses. Infrastructure companies may be adversely affected by environmental clean-up costs and catastrophic events such as earthquakes, hurricanes, fires, and terrorist acts. Infrastructure-related securities may be issued by companies that are highly leveraged, less creditworthy or financially distressed. These investments are considered to be speculative and are subject to greater risk of loss, greater sensitivity to interest rate and economic changes, valuation difficulties, and potential illiquidity. The value of a Portfolio's shares could experience significantly greater volatility than the value of shares of portfolios investing more broadly.

Initial Public Offering ("IPO") Risk — Securities issued in IPOs are subject to many of the same risks as investing in companies with smaller market capitalizations. Securities issued in IPOs have no trading history, and information about the companies may be available for very limited periods. Prior to an IPO, there is no public market for an issuer's securities, and there can be no assurance that an active trading market will develop or be sustained following the IPO. In addition, the prices of securities sold in IPOs may be highly volatile. Therefore, a Portfolio may hold IPO shares for a very short period of time. At times, a Portfolio may not be able to invest in securities issued in IPOs, or invest to the extent desired, if, for example, only a small portion of the securities being offered in an IPO are made available to the Portfolio. In addition, under certain market conditions, a relatively small number of companies may issue securities in IPOs. Similarly, as the number of portfolios to which IPO securities are allocated increases, the number of securities allocated to any one portfolio may decrease. To the extent a Portfolio with a small asset base invests in IPOs, a significant portion of its returns may be attributable to its investments in IPOs, which have a magnified impact on portfolios with small asset bases. The impact of IPOs on such a Portfolio's performance will likely decrease as the Portfolio's asset size increases, which could reduce the Portfolio's returns. There is no guarantee that as such a Portfolio's assets grow it will continue to experience substantially similar performance by investing in profitable IPOs.

Interest Rate Risk — Changes in interest rates may affect the yield, liquidity and value of investments in income producing or debt securities. Changes in interest rates also may affect the value of other securities. When interest rates rise, the value of a Portfolio's debt securities generally declines. Conversely, when interest rates decline, the value of a Portfolio's debt securities generally rises. Typically, the longer the maturity (i.e., the term of a debt security) or duration (i.e., a measure of the sensitivity of a debt security to changes in market interest rates, based on the entire cash flow associated with the security) of a debt security, the greater the effect a change in interest rates could have on the security's price. For example, if a debt security has a duration of five years and interest rates increase by 1%, the debt security's price typically would be expected to decline by approximately 5%. Thus, the sensitivity of a Portfolio's debt securities to interest rate risk will increase the greater the duration of those securities. Greater sensitivity to changes in interest rates may increase the volatility of a debt security's value and may lead to losses. Interest rate changes can be sudden and unpredictable, and are influenced by a number of factors, including government policy, monetary policy, inflation rates and/or investor expectations concerning such rates, perceptions of risk, and supply and demand of bonds. Changes in government monetary policy, including changes in federal tax policy or changes in a central bank's implementation of specific policy goals, may have a substantial and immediate impact on interest rates. However, there can be no guarantee that any particular government or central bank policy will be continued, discontinued or changed, or that any such policy will have the desired effect on interest rates. Short-term and long-term interest rates, and interest rates in different countries, do not necessarily move in the same direction or by the same amount.

Due to concerns regarding recent high inflation in many sectors of the U.S. and global economies, the U.S. Federal Reserve and many foreign central banks and monetary authorities raised interest rates and implemented other policy initiatives in an effort to control inflation, and they may continue to do so. It is difficult to predict the timing, frequency, magnitude or direction of further interest rate changes, and the evaluation of macro-economic and other conditions or events could cause a change in approach in the future. Fixed-income and related markets may continue to experience heightened levels of interest rate volatility.

During periods of very low interest rates, which occur from time to time due to market forces or actions of governments and/or their central banks, a Portfolio may be subject to a greater risk of principal decline from rising interest rates. A significant or rapid rise in interest rates could result in losses, which could be substantial, to a Portfolio.

Certain countries have experienced negative interest rates on certain fixed-income instruments. Very low or negative interest rates may magnify interest rate risk by, among other things, reducing or eliminating interest income and causing declines in the value of investments in income producing or debt securities. Changing interest rates, including rates that fall below zero, may have unpredictable effects on markets, may result in heightened market volatility and may detract from Portfolio performance to the extent a Portfolio is exposed to such interest rates.

Investment Grade Securities Risk — Debt securities generally are rated by national bond ratings agencies. A Portfolio considers securities to be investment grade if they are rated BBB or higher by S&P or Fitch, or Baa or higher by Moody's, or, if unrated, determined by the investment manager to be of comparable quality. Securities rated in the lower investment grade rating categories (e.g., BBB or Baa) are considered investment grade securities, but may have more risk than higher rated obligations because they are regarded as having only an adequate capacity to pay principal and interest, are considered to lack outstanding investment characteristics, and may possess certain speculative characteristics.

Investment Style Risk — A Portfolio may use a particular style or set of styles — for example, growth or value investing styles — to select investments. Those styles may be out of favor or may not produce the best results over short or longer time periods.

Growth investing generally focuses on companies that, due to their strong earnings and revenue potential, offer above-average prospects for capital growth, with less emphasis on dividend income. Earnings predictability and confidence in earnings forecasts are an important part of the selection process. As a result, the price of growth stocks may be more sensitive to changes in current or expected earnings than the prices of other stocks. A Portfolio using this approach generally seeks out companies experiencing some or all of the following: high sales growth, high unit growth, high or improving returns on assets and equity, and a strong balance sheet. Such a Portfolio also prefers companies with a competitive advantage such as unique management, marketing or research and development. Growth investing also is subject to the risk that the stock price of one or more companies will fall or will fail to appreciate as anticipated by the Portfolio, regardless of movements in the securities market. Growth stocks tend to be more volatile than value stocks, so in a declining market their prices may decrease more than value stocks in general. Growth stocks also may increase the volatility of the Portfolio's share price.

Value investing attempts to identify strong companies selling at a discount from their perceived true worth. A Portfolio using this approach generally selects stocks at prices that, in its view, are temporarily low relative to the company's earnings, assets, cash flow and dividends. Value investing is subject to the risk that a stock's full value may never be fully recognized or realized by the market, or its price may go down. In addition, there is the risk that a stock judged to be undervalued may actually have been appropriately priced or overvalued at the time of investment. Value investing generally emphasizes companies that, considering their assets and earnings history, are attractively priced and may provide dividend income.

Large-Cap Company Risk — Larger more established companies may be unable to respond quickly to new competitive challenges such as changes in technology and consumer tastes, which may lead to a decline in their market price. Many larger companies also may not be able to attain the high growth rate of successful smaller companies, especially during extended periods of economic expansion. Investing more heavily in one market capitalization category (large, medium or small) carries the risk that due to market conditions that category may be out of favor with investors.

Large Transaction Risk — A significant percentage of a Portfolio's shares may be owned or controlled by the Adviser and its affiliates, other Portfolios advised by the Adviser (including funds of funds), or other large shareholders, including primarily insurance company separate accounts. Accordingly, a Portfolio is subject to the potential for large-scale inflows and outflows as a result of purchases and redemptions of its shares by such shareholders, including in connection with substitution and other transactions by affiliates of the Adviser. These inflows and outflows may be frequent and could negatively affect a Portfolio's net asset value and performance, and could cause a Portfolio to purchase or sell securities at a time when it would not normally do so. It would be particularly disadvantageous for a Portfolio if it experiences outflows and needs to sell securities at a time of volatility in the markets, when values could be falling. These inflows and outflows also could negatively affect a Portfolio's ability to meet shareholder redemption requests or could limit a Portfolio's ability to pay redemption proceeds within the time period stated in its prospectus because of unusual market conditions, an unusually high volume of redemption requests, or other reasons. During periods of declining or illiquid markets, the Adviser or its affiliates also could be subject to conflicts of interest in selecting shares of Portfolios for redemption and in deciding whether and when to redeem such shares. In addition, these inflows and outflows could increase a Portfolio's brokerage or other transaction costs, and large-scale outflows could cause a Portfolio's actual expenses to increase, or could result in a Portfolio's current expenses being allocated over a smaller asset base, which, depending on any applicable expense caps, could lead to an increase

in the Portfolio's expense ratio. Although large transactions may be more frequent under certain circumstances, a Portfolio is generally subject to the risk that shareholders can purchase or redeem a significant percentage of Portfolio shares at any time.

Leveraging Risk — When a Portfolio leverages its holdings, the value of an investment in that Portfolio will be more volatile and all other risks will tend to be compounded. Investments that create leverage can result in losses to a Portfolio that exceed the amount originally invested and may accelerate the rate of losses (some of which may be sudden or substantial). For certain investments that create leverage, or have embedded leverage, relatively small market fluctuations can result in large changes in the value of such investments. In addition, the costs that a Portfolio pays to engage in these practices are additional costs borne by the Portfolio and could reduce or eliminate any net investment profits. Unless the profits from engaging in these practices exceed the costs of engaging in these practices, the use of leverage will diminish the investment performance of a Portfolio compared with what it would have been had the Portfolio not used leverage. There can be no assurance that a Portfolio's use of any leverage will be successful.

Liquidity Risk — From time to time, there may be little or no active trading market for a particular investment in which a Portfolio may invest or is invested due to a variety of circumstances, including but not limited to deterioration in the financial condition of an issuer or issuers in a particular industry or market segment, periods of economic and market stress, changes in investor perceptions regarding an issuer or industry, periods of market volatility that trigger market circuit breakers that halt trading in securities or close markets entirely, planned market closures, shortened trading hours, extended market holidays, and other reasons. In such a market, the value of such investments and a Portfolio's share price may fall dramatically. Illiquid investments may be difficult or impossible to sell or purchase at an advantageous time or price or in sufficient amounts to achieve a Portfolio's desired level of exposure. To meet redemption requests during periods of illiquidity, a Portfolio may be forced to dispose of investments at unfavorable times or prices and/or under unfavorable conditions, which may result in losses or may be costly to the Portfolio. Judgment plays a greater role in valuing illiquid investments than investments with more active markets, and there is a greater risk that the investments may not be sold for the price at which a Portfolio is carrying them. A Portfolio also may not receive its proceeds from the sale of certain investments for an extended period of time. Certain investments that were liquid when purchased may later become illiquid, sometimes abruptly, particularly in times of overall economic distress or adverse investor perception. In addition, the trading market for certain investments may become illiquid under adverse market or economic conditions independent of any specific adverse changes in the conditions of a particular issuer. An inability to sell a portfolio position can adversely affect a Portfolio's value or prevent a Portfolio from being able to take advantage of other investment opportunities. Market participants attempting to sell the same or a similar investment at the same time as a Portfolio could decrease the liquidity of such an investment, especially during periods of market stress, and contribute to downward pricing pressure. During periods of market stress, an investment or even an entire market segment may become illiquid, sometimes abruptly, which can adversely affect a Portfolio's ability to limit losses. In addition, a reduction in the ability or willingness of dealers and other institutional investors to make a market in certain securities may result in decreased liquidity in certain markets.

The SEC has instituted various requirements for open-end funds, including the Portfolios, to establish, and the Portfolios have established, a program to manage liquidity risks. These requirements are intended to reduce liquidity risk, but they may not work as intended. Analyses, judgments and decisions made in connection with administering the liquidity risk management program may be incorrect or otherwise may not produce the desired results. In addition, changes in market conditions, which may occur rapidly and unpredictably, may adversely affect the administration of the program. Changes related to the requirements may increase a Portfolio's expenses, may negatively affect a Portfolio's yield and return potential, and may not reduce a Portfolio's liquidity risk.

Additional legislative or regulatory actions to address perceived liquidity or other issues in markets generally, or in particular markets such as the fixed income securities markets, may alter or impair a Portfolio's ability to pursue its investment objectives or utilize certain investment strategies and techniques.

Loan Risk — A bank loan represents an interest in a loan or other direct indebtedness that entitles the acquirer of such interest to payments of interest, principal and/or other amounts due under the structure of the loan. Loan interests are subject to liquidity risk, prepayment risk, extension risk, the risk of subordination to other creditors, restrictions on resale, and the lack of a regular trading market and publicly available information. Loan interests may be difficult to value and may have extended trade settlement periods (bank loans may have trade settlement periods that extend beyond seven days). As a result, the proceeds from the sale of a loan may not be available to make additional investments or to meet redemption obligations until potentially a substantial period after the sale of the loan. The extended trade settlement periods could force a Portfolio to liquidate other securities to meet redemptions and may present a risk that the Portfolio may incur losses in order to timely honor redemptions.

A Portfolio's investments in loans are subject to the risk that the Portfolio will not receive payment of interest, principal and other amounts due in connection with these investments and will depend primarily on the financial condition of the borrower. Fully secured loans offer a Portfolio more protection than unsecured loans in the event of nonpayment of scheduled interest or principal, although there is no assurance that the liquidation of a secured loan's collateral would satisfy the borrower's obligation or that the collateral could be readily liquidated. In addition, a Portfolio's access to collateral may be limited by bankruptcy or other insolvency laws. In

the event of a default, a Portfolio may not recover its principal, may experience a substantial delay in recovering its investment and may not receive interest during the delay. Unsecured loans are subject to a greater risk of default than secured loans, especially during periods of deteriorating economic conditions. Unsecured loans also have a greater risk of nonpayment in the event of a default than secured loans since there is no recourse for the lender to collateral. Loans in which a Portfolio may invest may be made to finance highly leveraged corporate transactions. The highly leveraged capital structure of the borrowers in such transactions may make such loans especially vulnerable to adverse changes in economic or market conditions. In addition, loan interests may be unrated, and a Portfolio's Sub-Adviser may be required to rely exclusively on its own analysis of the borrower in determining whether to acquire, or to continue to hold, a loan. Loans may not be considered "securities," and purchasers, such as a Portfolio, therefore may not have the benefit of the anti-fraud protections of the federal securities laws.

Loan agreements, which set forth the terms of a loan and the obligations of the borrower and lender, contain certain covenants that mandate or prohibit certain borrower actions, including financial covenants (or "maintenance covenants") that dictate certain minimum and maximum financial performance levels. Certain types of loans contain fewer maintenance covenants than traditional loans (or no maintenance covenants at all) and may not include terms that permit the lender to monitor the financial performance of the borrower and declare an event of default if certain criteria are breached. This may hinder a Portfolio's ability to reprice credit risk associated with the borrower and reduce a Portfolio's ability to restructure a problematic loan and mitigate potential loss. As a result, a Portfolio's exposure to losses on these types of loans may be increased, especially during a downturn in the credit cycle.

A Portfolio may acquire a loan interest by obtaining an assignment of all or a portion of the interests in a particular loan that are held by an original lender or a prior assignee. As an assignee, a Portfolio normally will succeed to all rights and obligations of its assignor with respect to the portion of the loan that is being assigned. However, the rights and obligations acquired by the purchaser of a loan assignment may differ from, and be more limited than, those held by the original lenders or the assignor. A Portfolio may also purchase a participation in a loan interest that is held by another party. When a Portfolio's loan interest is a participation, the Portfolio may have less control over the exercise of remedies than the party selling the participation interest, and the Portfolio normally would not have any direct rights against the borrower. It is possible that a Portfolio could be held liable, or may be called upon to fulfill other obligations, with respect to loans in which it receives an assignment in whole or in part, or in which it owns a participation. The potential for such liability is greater for an assignee than for a participant.

Market Risk — A Portfolio is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect Portfolio performance. Securities markets also may experience long periods of decline in value. The value of a security may decline due to factors that are specifically related to a particular company, as well as general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic or political conditions, changes in the general outlook for corporate earnings, inflation rates and/or investor expectations concerning such rates, changes in interest rates or currency rates, recessions, global demand for particular products or resources, lack of liquidity in the markets, or adverse investor sentiment generally. In some cases, for example, the stock prices of individual companies have been negatively impacted even though there may be little or no apparent degradation in the financial condition or prospects of the issuers. The value of a security also may decline due to factors that affect a particular sector or industry, such as tariffs, labor shortages or increased production costs and competitive conditions within the sector or industry.

Equity securities generally have greater price volatility than fixed income securities, although under certain market conditions fixed income securities may have comparable or greater price volatility. During a general downturn in the securities markets, multiple asset classes may decline in value simultaneously. Adverse market conditions may be prolonged and may not have the same impact on all types of securities or asset classes. Changes in value may be temporary or may last for extended periods. Changes in the financial condition of (or other event affecting) a single issuer can impact an individual sector or industry, or the securities markets as a whole. A Portfolio may experience a substantial or complete loss on any individual security. Even when securities markets perform well, there can be no assurance that the investments held by a Portfolio will increase in value along with the broader market. Market factors, such as the demand for particular portfolio securities, may cause the price of certain portfolio securities to fall while the prices of other securities rise or remain unchanged. Historical patterns of correlation among asset classes may break down in unanticipated ways during times of high volatility, disrupting investment programs and potentially causing losses. Additionally, market speculation focused on profiting from fluctuations in the value of one or more securities or asset classes over a short period of time may result in large-scale and sudden purchases and sales of those securities or asset classes, which can significantly affect the value of those securities and asset classes as well as the market more broadly in unexpected ways, and cause significant share price volatility and losses for a Portfolio.

Global economies and financial markets are highly interconnected, which increases the likelihood that conditions in one country or region or events affecting a single or small number of issuers will adversely impact issuers in a different country or region. World markets, or those in a particular region, may all react in similar fashion to important economic, political or other developments. Events such as environmental, natural or man-made disasters or other catastrophes, public health crises (such as epidemics and pandemics), social unrest, supply chain disruptions, widespread and prolonged power outages, and cybersecurity incidents, and governments'

reactions (or failure to react) to such events, could cause uncertainty in the markets and may adversely affect the performance of the global economy. Geopolitical and other events, including acts of terrorism, tensions, war or other open conflicts between nations, or political or economic dysfunction within some nations that are global economic powers or major producers of oil, may lead to overall instability in world economies and markets generally and have led, and may in the future lead, to increased market volatility and may have adverse long-term effects. As a result, the value and liquidity of a Portfolio's investments may be negatively affected by developments in other countries and regions, whether or not the Portfolio invests in securities of issuers located in or with significant exposure to the countries or regions directly affected. Securities issued by U.S. entities with substantial foreign operations or holdings can involve risks relating to conditions in foreign countries. Events and evolving conditions in certain economies or markets may alter the risks associated with investments tied to countries or regions that historically were perceived as comparatively stable and make such investments riskier and more volatile. Moreover, systemic market dislocations of the kind that occurred during the global financial crisis that began in 2008, if repeated, would be highly disruptive to economies and markets, adversely affecting individual companies and industries, securities markets, interest rates, credit ratings, inflation, investor sentiment, and other factors affecting the value of a Portfolio's investments.

Impacts from climate change may include significant risks to global financial assets and economic growth. Certain issuers, industries and regions may be adversely affected by the impacts of climate change, including on the demand for and the development of goods and services and related production costs, and the impacts of legislation, regulation and international accords related to climate change, as well as any indirect consequences of regulation or business trends driven by climate change.

Changes in government or central bank policies, changes to regulations involving the securities markets, and political, diplomatic and other events within the United States and abroad may affect investor and consumer confidence and may increase uncertainty in or impair the operation of the U.S. or other securities markets, perhaps suddenly and to a significant degree.

In addition, markets and market-participants are increasingly reliant on both publicly available and proprietary information data systems. Inaccurate data, software or other technology malfunctions, programming inaccuracies, unauthorized use or access, and similar circumstances may impair the performance of these systems and may have an adverse impact upon a single issuer, a group of issuers, or the market at large. In certain cases, an exchange or market may close or issue trading halts on either specific securities or even the entire market, which may result in a Portfolio being, among other things, unable to buy or sell certain securities or financial instruments or accurately price its investments. Furthermore, impacts from the rapidly growing use of artificial intelligence technologies, including by market-participants, may include significant risks to global financial markets.

Master Limited Partnership Risk — Investing in MLPs involves certain risks related to investing in the underlying assets of the MLPs and risks associated with pooled investment vehicles. MLPs holding credit-related investments are subject to interest rate risk and the risk of default on payment obligations by debt issuers. MLPs that concentrate in a particular industry or a particular geographic region are subject to risks associated with such industry or region. Investments held by MLPs may be relatively illiquid, limiting the MLPs' ability to vary their portfolios promptly in response to changes in economic or other conditions. MLPs may have limited financial resources, their securities may trade infrequently and in limited volume, and they may be subject to more abrupt or erratic price movements than securities of larger or more broadly based companies, and may be difficult to value. MLPs involve certain other risks, including risks related to limited control and voting rights on matters affecting MLPs, risks related to potential conflicts of interest between an MLP and the MLP's general partner, cash flow risks, and risks related to the general partner's right to require unit-holders to sell their common units at an undesirable time or price. Distributions from an MLP may consist in part of a return of the amount originally invested, which would not be taxable to the extent the distributions do not exceed the investor's adjusted basis in its MLP interest. These reductions in a Portfolio's adjusted tax basis in the MLP securities will increase the amount of gain (or decrease the amount of loss) recognized by the Portfolio on a subsequent sale of the securities.

Much of the benefit a Portfolio derives from its investment in equity securities of MLPs is a result of MLPs generally being treated as partnerships for U.S. federal income tax purposes. A change in current tax law, or a change in the business of a given MLP, could result in an MLP being treated as a corporation for U.S. federal income tax purposes and subject to corporate level tax on its income, and could reduce the amount of cash available for distribution by the MLP to its unit holders, such as a Portfolio. If an MLP were classified as a corporation for federal income tax purposes, the MLP may incur significant federal and state tax liability, likely causing a reduction in the value of a Portfolio's shares.

The risks of investing in an MLP generally include those inherent in investing in a partnership as opposed to a corporation. For example, state law governing partnerships is often less restrictive than state law governing corporations. Accordingly, there may be fewer protections afforded investors in an MLP than investors in a corporation. Although unit holders of an MLP are generally limited in their liability, similar to a corporation's shareholders, creditors typically have the right to seek the return of distributions made to unit holders if the liability in question arose before the distributions were paid. This liability may stay attached to a unit holder even after it sells its units.

Mid-Cap, Small-Cap and Micro-Cap Company Risk — A Portfolio's investments in mid-, small- and micro-cap companies may involve greater risks than investments in larger, more established issuers because they generally are more vulnerable than larger companies to adverse business or economic developments, which can negatively affect their value. Such companies generally have narrower product lines, more limited financial and management resources and more limited markets for their securities as compared with larger companies. Their securities may be less well-known and trade less frequently and in limited volume compared with the securities of larger, more established companies. As a result, the value of such securities may be more volatile than the value of securities of larger companies, and the Portfolio may experience difficulty in purchasing or selling such securities at the desired time and price or in the desired amount. Mid-, small- and micro-cap companies also are typically subject to greater changes in earnings and business prospects than larger companies. Consequently, the prices of mid-, small- and micro-cap company securities tend to rise and fall in value more frequently than the prices of securities of larger companies. Although investing in mid-, small- and micro-cap companies offers potential for above-average returns, the companies may not succeed and the value of their securities could decline significantly. In general, these risks are greater for small- and micro-cap companies than for mid-cap companies. Investing more heavily in one market capitalization category (large, medium or small) carries the risk that due to market conditions that category may be out of favor with investors.

Money Market Risk — Although a money market fund is designed to be a relatively low risk investment, it is not free of risk. Despite the short maturities and high credit quality of a money market fund's investments, increases in interest rates and deteriorations in the credit quality of the instruments the money market fund has purchased may reduce the money market fund's yield and can cause the price of a money market security to decrease. In addition, a money market fund is subject to the risk that the value of an investment may be eroded over time by inflation. In the event that any money market fund that seeks to maintain a stable \$1.00 net asset value fails to maintain a stable net asset value (or if there is a perceived threat that a money market fund is likely to fail to maintain a stable net asset value), money market funds in general could face increased redemption pressures, which could jeopardize the stability of their net asset values. Certain money market funds have in the past failed to maintain stable \$1.00 net asset values, and there can be no assurance that such failures and resulting redemption pressures will not occur in the future. A low- or negative-interest rate environment may prevent a money market fund from providing a positive yield, and could negatively impact a money market fund's ability to maintain a stable \$1.00 net asset value per share.

Certain money market funds are institutional money market funds, which means that the net asset value of the fund's shares will "float". A money market fund with a floating net asset value does not maintain a stable \$1.00 net asset value per share; rather, its net asset value will fluctuate with changes in the values of the securities in which the fund invests. Shares sold utilizing a floating net asset value may be worth more or less than their original purchase price. An institutional money market fund is permitted to impose a liquidity fee upon the redemption of fund shares and, effective October 2, 2024, generally will be required to impose a liquidity fee when the fund experiences daily net redemptions of fund shares that exceed certain levels.

Money market funds are subject to specific rules that affect the manner in which these funds are structured and operated. Changes in these rules may impact a money market fund's expenses, operations, returns, liquidity and continued viability.

Mortgage-Related and Other Asset-Backed Securities Risk — Investments in mortgage-related and other asset-backed securities are subject to credit risk, liquidity risk, the risk of default, interest rate risk, and prepayment and extension risk, sometimes to a greater extent than various other types of fixed income investments. Declines in the credit quality of and defaults by the issuers of mortgage-related and other asset-backed securities may decrease the value of such securities, which could result in losses to a Portfolio, and may reduce the liquidity of such securities and make such securities more difficult to purchase or sell at an advantageous time and price. In addition, borrowers may default on the obligations that underlie mortgage-related and other asset-backed securities. The risk of defaults by borrowers generally is greater during times of rising interest rates and/or unemployment rates. The impairment (or loss) of the value of collateral or other assets underlying mortgage-related and other asset-backed securities will result in a reduction in the value of the securities. Certain collateral may be difficult to locate in the event of default, or may be lost, and recoveries of depreciated or damaged collateral may not fully cover payments due on such collateral. Asset-backed securities may not have the benefit of a security interest in collateral comparable to that of mortgage assets, resulting in additional credit risk. In addition, even when there is no default or threat of default, instability in the markets for mortgage-related and other asset-backed securities may reduce (at times, significantly) the liquidity of such securities. As a result, the value of such securities may decrease and a Portfolio may incur greater losses on the sale of such securities than under more stable market conditions. Furthermore, instability and illiquidity in the market for lower-rated mortgage-related and other asset-backed securities may affect the overall market for such securities, thereby impacting the liquidity and value of higher-rated securities.

If a Portfolio purchases mortgage-related or other asset-backed securities that are "subordinated" to other interests in the same pool, the Portfolio, as a holder of those securities, may receive payments only after the pool's obligations to other investors have been satisfied. For example, an unexpectedly high rate of defaults on the mortgages held by a mortgage pool may limit substantially the pool's ability to make payments of principal or interest to the Portfolio as a holder of such subordinated securities, reducing the values of those securities or in some cases rendering them worthless. In addition, certain mortgage-related and other asset-backed

securities may include securities backed by pools of loans made to “subprime” borrowers or borrowers with blemished credit histories. The underwriting standards for subprime loans may be lower and more flexible than the standards generally used by lenders for borrowers with non-blemished credit histories with regard to the borrowers’ credit standing and repayment ability. Borrowers who qualify generally have impaired credit histories, which may include a record of major derogatory credit items such as outstanding judgments or prior bankruptcies. In addition, they may not have the documentation required to qualify for a standard loan. As a result, the loans in the pool are likely to experience rates of delinquency, foreclosure, and bankruptcy that are higher, and that may be substantially higher, than those experienced by loans underwritten in a more traditional manner. In addition, changes in the values of the assets underlying the loans (if any), as well as changes in interest rates, may have a greater effect on the delinquency, foreclosure, bankruptcy, and loss experience of the loans in the pool than on loans originated in a more traditional manner. The risk of defaults by borrowers is generally higher in the case of asset or mortgage pools that include subprime assets or mortgages, and the liquidity and value of subprime mortgages and non-investment grade mortgage-backed securities that are not guaranteed by Ginnie Mae, Fannie Mae, and Freddie Mac could change dramatically over time.

Payment of interest and repayment of principal, the schedule for which varies based on the terms of the loan, may be largely dependent upon the cash flows generated by the assets backing the securities and, in certain cases, supported by various forms of insurance or guarantees, including letters of credit, surety bonds, or other credit or liquidity enhancements. There can be no assurance that insurers or guarantors can meet their obligations under the insurance policies or guarantee arrangements. Furthermore, mortgage-related and other asset-backed securities typically provide the issuer with the right to prepay the security prior to maturity. During periods of rising interest rates, the rate of prepayments tends to decrease because borrowers are less likely to prepay debt (such as mortgage debt or automobile loans). Slower than expected payments can extend the average lives of mortgage-related and other asset-backed securities, and this may lock in a below market interest rate and increase the security’s duration and interest rate sensitivity, which may increase the volatility of the security’s value and may lead to losses. During periods of falling interest rates, the rate of prepayments tends to increase because borrowers are more likely to pay off debt and refinance at the lower interest rates then available. Unscheduled prepayments shorten the average lives of mortgage-related and other asset-backed securities and may result in the Portfolio’s having to reinvest the proceeds of the prepayments at lower interest rates. Unscheduled prepayments also would limit the potential for capital appreciation on these securities and may make them less effective than other fixed income securities as a means of “locking in” long-term interest rates, thereby reducing the Portfolio’s income. Prepayment rates are difficult to predict, and the potential impact of prepayments on the value of a mortgage-related or other asset-backed security depends on the terms of the instrument and can result in significant volatility.

Privately issued mortgage-related and other asset-backed securities may be subject to heightened liquidity risk. During periods of market stress or high redemptions, a Portfolio may be forced to sell these securities at significantly reduced prices, resulting in losses. Liquid privately issued mortgaged-related and other asset-backed securities can become illiquid during periods of market stress. Privately issued mortgage-related securities are not subject to the same underwriting standards for the underlying mortgages that are applicable to those mortgage-related securities that have U.S. government or government-sponsored enterprise (“GSE”) guarantees. As a result, the mortgage loans underlying privately issued mortgage-related securities may, and frequently do, have less favorable collateral, credit risk, liquidity risk, or other underwriting characteristics than U.S. government or GSE mortgage-related securities.

Mortgage-backed securities issued in the form of collateralized mortgage obligations (“CMOs”) are collateralized by mortgage loans or mortgage pass-through securities. In periods of supply and demand imbalances in the market for CMOs or in periods of sharp interest rate movements, the prices of CMOs may fluctuate to a greater extent than would be expected from interest rate movements alone. CMOs and other mortgage-backed securities may be structured similarly to collateralized debt obligations and may be subject to similar risks.

Multiple Sub-Adviser Risk — The Adviser may allocate a Portfolio’s assets among multiple Sub-Advisers, each of which is responsible for investing its allocated portion of the Portfolio’s assets. To a significant extent, a Portfolio’s performance will depend on the success of the Adviser in allocating the Portfolio’s assets to Sub-Advisers and its selection and oversight of the Sub-Advisers. The Sub-Advisers’ investment strategies may not work together as planned, which could adversely affect a Portfolio’s performance. In addition, because each Sub-Adviser manages its allocated portion of a Portfolio independently from another Sub-Adviser, the same security may be held in different portions of the Portfolio, or may be acquired for one portion of the Portfolio at a time when a Sub-Adviser to another portion deems it appropriate to dispose of the security from that other portion, resulting in higher expenses without accomplishing any net result in the Portfolio’s holdings. Similarly, under some market conditions, one Sub-Adviser may believe that temporary, defensive investments in short-term instruments or cash are appropriate for its allocated portion of the Portfolio when another Sub-Adviser believes continued exposure to the equity or debt markets is appropriate for its allocated portion of the Portfolio. Because each Sub-Adviser directs the trading for its own portion of a Portfolio, and does not aggregate its transactions with those of the other Sub-Adviser(s), the Portfolio may incur higher brokerage costs than would be the case if a single Sub-Adviser were managing the entire Portfolio. In addition, while the Adviser seeks to allocate a Portfolio’s assets among the Portfolio’s Sub-Advisers in a manner

that it believes is consistent with achieving the Portfolio's investment objective(s), the Adviser is subject to conflicts of interest in allocating the Portfolio's assets among Sub-Advisers, including affiliated Sub-Advisers, because the Adviser pays different fees to the Sub-Advisers and due to other factors that could impact the Adviser's or its affiliates' revenues and profits.

If the Adviser hires, terminates or replaces a Sub-Adviser to a Portfolio or adjusts the asset allocation among Sub-Advisers in a Portfolio, the Portfolio may experience a period of transition during which the securities held in the Portfolio may be repositioned in connection with the change in Sub-Advisers. A Portfolio may not pursue its principal investment strategies during such a transition period and may incur increased brokerage commissions and other transaction costs in connection with the changes.

Natural Resources Sector Risk — The profitability of companies in the natural resources sector can be adversely affected by worldwide energy prices and other world events, limits on and the success of exploration projects, and production spending. Companies in the natural resources sector also could be adversely affected by commodity price volatility, changes in exchange rates, interest rates or inflation rates and/or investor expectations concerning such rates, changes in the supply of, or the demand for, natural resources, climate change, imposition of import controls, government regulation and intervention, civil conflict, economic conditions, increased competition, technological developments, and labor relations. In addition, companies in the natural resources sector may be subject to the risks generally associated with extraction of natural resources, such as the risks of mining and oil drilling, and the risks of the hazards associated with natural resources, such as natural or man-made disasters, fire, drought, liability for environmental damage claims, and increased regulatory and environmental costs. Prices of precious metals and of precious metal related securities have historically been very volatile due to various economic, financial, social and political factors and may adversely affect the financial condition of companies involved with precious metals. The value of a Portfolio's shares could experience significantly greater volatility than the value of shares of portfolios investing more broadly.

New Portfolio Risk — Certain Portfolios may be relatively new and small with limited operating history. A new Portfolio's performance may not represent how the Portfolio is expected to or may perform in the long-term and a Portfolio may not be successful in implementing its respective investment strategies. Portfolio performance may be lower or higher during this "ramp-up" period, and may also be more volatile, than would be the case after the Portfolio is fully invested. In addition, investment positions may have a disproportionate impact (negative or positive) on performance in new Portfolios. There can be no assurance that such Portfolios will grow to or maintain an economically viable size, which could result in a Portfolio, including a Portfolio offered by this Prospectus, being liquidated at any time without shareholder approval and at a time that may not be favorable for all shareholders.

Non-Diversified Portfolio Risk — A non-diversified Portfolio may invest a relatively high percentage of its assets in a limited number of issuers. As a result, the Portfolio's performance will be more vulnerable to changes in market value of a single issuer or group of issuers and more susceptible to risks associated with a single economic, political or regulatory occurrence affecting one or more of these issuers.

Non-Investment Grade Securities Risk — Bonds rated below BBB by S&P or Fitch, or below Baa by Moody's or, if unrated, determined by the investment manager to be of comparable quality, are speculative in nature, involve greater risk of default by the issuing entity and may be subject to greater market fluctuations than higher rated fixed income securities. Non-investment grade bonds, sometimes referred to as "junk bonds," are usually issued by companies without long track records of sales and earnings, or by those companies with questionable credit strength. The creditworthiness of issuers of non-investment grade debt securities may be more complex to analyze than that of issuers of investment grade debt securities, and the reliance on credit ratings may present additional risks. The retail secondary market for these "junk bonds" may be less liquid than that of higher rated securities and adverse conditions could make it difficult at times to sell certain securities or could result in lower prices than those used in calculating a Portfolio's net asset value. A Portfolio investing in "junk bonds" may also be subject to greater credit risk because it may invest in debt securities issued in connection with corporate restructuring by highly leveraged issuers or in debt securities not current in the payment of interest or principal or in default. If the issuer of a security is in default with respect to interest or principal payments, a Portfolio may lose its entire investment. The credit rating of a below investment grade security does not necessarily address its market value risk and may not reflect its actual credit risk. Ratings and market value may change from time to time, positively or negatively, to reflect new developments regarding the issuer. Because of the risks involved in investing in below investment grade securities, an investment in a Portfolio that invests substantially in such securities should be considered speculative.

Non-U.S. Issuer Risk — A Portfolio may invest in U.S.-registered, dollar-denominated bonds of non-U.S. corporations. Investments in bonds of non-U.S. issuers involve certain risks that are greater than those associated with investments in securities of U.S. issuers. These include risks of adverse changes in foreign economic, political, regulatory and other conditions; the imposition of economic sanctions or other government restrictions; differing accounting, auditing, financial reporting and legal standards and practices; differing securities market structures; and higher transaction costs. In certain countries, non-U.S. issuers may be subject to less governmental regulation than U.S. issuers and legal remedies available to investors may be more limited than those available with respect to investments in the United States. The securities of some foreign companies may be less liquid and at times more volatile than securities of comparable U.S. companies. Moreover, individual foreign economies may differ favorably or unfavorably from

the U.S. economy in such respects as growth of gross national product, rate of inflation, capital reinvestment, resource self-sufficiency and balance of payments position, and the prices of foreign bonds and U.S. bonds have, at times, moved in opposite directions. Changes to the financial condition or credit rating of a non-U.S. issuer may also adversely affect the value of the non-U.S. issuer's securities held by a Portfolio. These risks may be heightened in connection with bonds issued by non-U.S. corporations and entities in emerging markets.

Oil and Gas Sector Risk — The profitability of companies in the oil and gas sector is related to worldwide energy prices, exploration costs, and production spending. Companies in the oil and gas sector may be at risk for environmental damage claims and other types of litigation, as well as negative publicity and perception. Companies in the oil and gas sector may be adversely affected by natural disasters or other catastrophes, changes in exchange rates, interest rates, changes in prices for competitive energy services, development of alternative energy sources and energy conservation efforts, economic conditions, tax treatment, government regulation and intervention, and unfavorable events in the regions where companies operate or along shipping routes (e.g., expropriation, nationalization, confiscation of assets and property or imposition of restrictions on foreign investments and repatriation of capital, military coups, hostilities, social unrest, violence or labor unrest). As a result, the value of these companies may fluctuate widely. Companies in the oil and gas sector may have significant capital investments in, or engage in transactions involving, emerging market countries, which may heighten these risks. The value of a Portfolio's shares could experience significantly greater volatility than the value of shares of portfolios investing more broadly.

Portfolio Management Risk — A Portfolio is subject to the risk that strategies used by an investment manager and its securities selections fail to produce the intended results. An investment manager's judgments or decisions about the quality, relative yield or value of, or market trends affecting, a particular security or issuer, industry, sector, region or market segment, or about the economy or interest rates, may be incorrect or otherwise may not produce the intended results, which may result in losses to a Portfolio. In addition, many processes used in Portfolio management, including security selection, rely, in whole or in part, on the use of various technologies, some of which are created or maintained by an investment manager or its affiliates and some of which are created or maintained by third parties. A Portfolio may suffer losses if there are imperfections, errors or limitations in the quantitative, analytic or other tools, resources, information and data used, or the analyses employed or relied on, by an investment manager, or if such tools, resources, information or data are used incorrectly, fail to produce the desired results, or otherwise do not work as intended. Imperfections, errors or limitations may go undetected for long periods of time or may never be detected, which could adversely affect decision making for a Portfolio, as well as a Portfolio's operations or performance, and may result in, among other things, the execution of unanticipated trades, the failure to execute anticipated trades, the failure to properly gather and organize available data and/or the failure to take certain hedging or risk-reducing actions. There can be no assurance that the use of these technologies will result in effective investment decisions for a Portfolio or enable a Portfolio to achieve its investment objective. Furthermore, artificial intelligence technologies are evolving and may be under development or implemented (or may already have been deployed) for certain processes, including portfolio management, data monitoring and analysis, security selection, trading, and portfolio risk management. The use of artificial intelligence or other evolving or emerging technologies presents significant risks and may exacerbate the aforementioned risks.

Portfolio Turnover Risk — High portfolio turnover (generally, turnover in excess of 100% in any given fiscal year) may result in increased transaction costs to a Portfolio, which may result in higher fund expenses and lower total return. A Portfolio that adopts new investment objectives or policies or portfolio management strategies, has a new or an additional Sub-Adviser, and/or undergoes a reorganization with another Portfolio may experience substantially increased portfolio turnover due to the differences between the Portfolio's previous and current investment objectives and policies and portfolio management strategies.

Preferred Stock Risk — Preferred stock is subject to many of the risks associated with debt securities, including interest rate risk. Unlike interest payments on debt securities, dividends on preferred stock are generally payable at the discretion of the issuer's board of directors. Preferred shareholders may have certain rights if dividends are not paid but generally have no legal recourse against the issuer. Shareholders may suffer a loss of value if dividends are not paid. In certain situations an issuer may call or redeem its preferred stock or convert it to common stock. The market prices of preferred stocks are generally more sensitive to actual or perceived changes in the issuer's financial condition or prospects than are the prices of debt securities. Preferred stock also may be less liquid than common stock. To the extent that a Portfolio invests a substantial portion of its assets in convertible preferred stocks, declining common stock values may also cause the value of the Portfolio's investments to decline.

Prepayment Risk and Extension Risk — Prepayment risk is the risk that the issuer of a security held by a Portfolio may pay off principal more quickly than originally anticipated, and the Portfolio may have to reinvest the proceeds in an investment offering a lower yield, may not benefit from any increase in value that might otherwise result from declining interest rates and may lose any premium it paid to acquire the security. Falling interest rates generally result in quicker payoffs as borrowers are motivated to pay off debt and refinance at new lower rates. Extension risk is the risk that the issuer of a security held by a Portfolio may pay off principal more slowly than originally anticipated. Rising interest rates generally result in slower payoffs, which effectively increase the duration

of certain debt securities and heighten interest rate risk. Additionally, a Portfolio may be prevented from reinvesting the proceeds it would have received at a given time in an investment offering a higher yield.

Privately Placed and Other Restricted Securities Risk — Restricted securities, which include privately placed securities, are securities that cannot be offered for public resale unless registered under the applicable securities laws or that have a contractual restriction that prohibits or limits their resale. Before they are registered, such securities may be sold only in a privately negotiated transaction or pursuant to an exemption from registration. Difficulty in selling securities may result in a loss or be costly to a Portfolio. Rule 144A is designed to facilitate efficient trading among institutional investors by permitting the sale of certain unregistered securities to qualified institutional buyers. To the extent restricted securities held by a Portfolio qualify under Rule 144A and an institutional market develops for those securities, the Portfolio likely will be able to dispose of the securities without registering them. To the extent that institutional buyers become, for a time, uninterested in purchasing these securities, investing in Rule 144A securities could increase the level of a Portfolio's illiquidity. The Adviser or Sub-Adviser may determine that certain securities qualified for trading under Rule 144A are liquid. Where registration of a security is required, a Portfolio may be obligated to pay all or part of the registration expenses, and a considerable period may elapse between the time the Portfolio desires to sell (and therefore decides to seek registration of) the security, and the time the Portfolio may be permitted to sell the security under an effective registration statement. If, during such a period, adverse market conditions were to develop, a Portfolio might obtain a less favorable price than prevailed when it desired to sell. The risk that securities may not be sold for the price at which a Portfolio is carrying them is greater with respect to restricted securities than it is with respect to registered securities. The illiquidity of the market, as well as the lack of publicly available information regarding these securities, also may make it difficult to determine a fair value for certain securities for purposes of computing a Portfolio's net asset value.

Real Estate Investing Risk — Real estate-related investments may decline in value as a result of factors affecting the overall real estate industry. Real estate is a cyclical business, highly sensitive to supply and demand and general and local economic conditions and characterized by intense competition and periodic overbuilding. Real estate income and values also may be greatly affected by demographic trends, such as population shifts or changing tastes and values. For example, the COVID-19 pandemic has impacted certain real estate sectors by accelerating the trend towards online shopping and remote-working environments, which has reduced the demand for commercial and office space. Losses may occur from, for example, casualty or condemnation, or extended vacancies of properties, and government actions, such as tax law changes, zoning law changes, regulatory limitations on rents, or environmental regulations, also may have a major impact on real estate. The availability of mortgages and changes in interest rates may also affect real estate values. Changing interest rates and credit quality requirements also will affect the cash flow of real estate companies and their ability to meet capital needs or refinance their obligations. In addition, global climate change may have a significant adverse effect on property and security values and may exacerbate the risks of natural disasters.

Real estate investment trusts ("REITs") generally invest directly in real estate (equity REITs), in mortgages secured by interests in real estate (mortgage REITs) or in some combination of the two (hybrid REITs). Investing in REITs exposes investors to the risks of owning real estate directly, as well as to risks that relate specifically to the way in which REITs are organized and operated. Equity REITs may be affected by changes in the value of the underlying property owned by the REIT, while mortgage REITs may be affected by the quality of any credit extended. Equity and mortgage REITs are also subject to heavy cash flow dependency, defaults by mortgagors or other borrowers, and self-liquidations. The risk of defaults is generally higher in the case of mortgage pools that include subprime mortgages involving borrowers with blemished credit histories. The liquidity and value of subprime mortgages and non-investment grade mortgage-backed securities that are not guaranteed by Ginnie Mae, Fannie Mae, and Freddie Mac could change dramatically over time. In addition, regardless of where a REIT is organized or traded, its performance may be affected significantly by events in the region where its properties are located.

Operating REITs requires specialized management skills, and a Portfolio that invests in REITs indirectly bears REIT management and administration expenses along with the direct expenses of the Portfolio. Individual REITs may own a limited number of properties and may concentrate in a particular region or property type. Domestic REITs also must satisfy specific Internal Revenue Code requirements in order to qualify for the tax-free pass-through of net investment income and net realized gains distributed to shareholders. Failure to meet these requirements may have adverse consequences on an investing Portfolio. Similar treatment may also apply to REIT-like entities under the laws of the countries in which they were formed. In addition, even the larger REITs in the industry tend to be small- to medium-sized companies in relation to the equity markets as a whole. Moreover, shares of REITs may trade less frequently and, therefore, are subject to more erratic price movements than securities of larger issuers.

Redemption Risk — A Portfolio may experience periods of heavy redemptions that could cause the Portfolio to sell assets at inopportune times, which could have a negative impact on the Portfolio's overall liquidity, or at a loss or depressed value. Redemption risk is heightened during periods of declining or illiquid markets. Redemption risk also is greater to the extent that one or more investors control a large percentage of investments in a Portfolio, have short investment horizons, or have unpredictable cash flow needs. Heavy redemptions could hurt a Portfolio's performance and increase transaction costs.

Market developments and other factors, including a general rise in interest rates, have the potential to cause investors to move out of fixed income securities on a large scale, which may increase redemptions from mutual funds that hold large amounts of fixed income securities. The market-making capacity of dealers has been reduced in recent years, in part as a result of structural changes, such as fewer proprietary trading desks at broker-dealers and increased regulatory capital requirements. Increased redemptions from mutual funds that hold large amounts of fixed income securities, coupled with a reduction in the ability or willingness of dealers and other institutional investors to buy or hold fixed income securities, may result in decreased liquidity and increased volatility in the fixed income markets.

Repurchase Agreements Risk — Repurchase agreements carry certain risks, including risks that are not associated with direct investments in securities. If a seller under a repurchase agreement were to default on the agreement and be unable to repurchase the security subject to the repurchase agreement, a Portfolio would look to the collateral underlying the seller's repurchase agreement, including the securities or other obligations subject to the repurchase agreement, for satisfaction of the seller's obligation to the Portfolio. A Portfolio's right to liquidate the securities or other obligations subject to the repurchase agreement in the event of a default by the seller could involve certain costs and delays and, to the extent that proceeds from any sale upon a default of the obligation to repurchase are less than the repurchase price (e.g., due to transactions costs or a decline in the value of the collateral), the Portfolio could suffer a loss. In addition, if bankruptcy proceedings are commenced with respect to the seller, realization of the collateral may be delayed or limited and a loss may be incurred.

Sector Risk — To the extent a Portfolio invests more heavily in one sector, industry, or sub-sector of the market, its performance will be especially sensitive to developments that significantly affect that sector, industry, or sub-sector. An individual sector, industry, or sub-sector of the market may be more volatile, and may perform differently, than the broader market. The industries that constitute a sector may all react in the same way to economic, political, regulatory or other events. An individual sector, industry, or sub-sector of the market may be affected by a change in financial condition or other event affecting a single issuer. A Portfolio's performance could also be affected if the sector, industry, or sub-sector does not perform as expected. Alternatively, the lack of exposure to one or more sectors or industries may adversely affect performance.

Short Position Risk — A Portfolio may engage in short sales and may enter into derivative contracts that have a similar economic effect (e.g., taking a short position in a futures contract). A Portfolio will incur a loss as a result of a short position if the price of the asset sold short increases between the date of the short position sale and the date on which an offsetting position is purchased. Short positions may be considered speculative transactions and involve special risks that could cause or increase losses or reduce gains. Short sales involve greater reliance on an investment adviser's ability to accurately anticipate the future value of a security or instrument, higher transaction costs, and imperfect correlation between the actual and desired level of exposure. Short sales present a risk of unlimited loss on an individual security basis, particularly in cases where a Portfolio is unable, for whatever reason, to close out its short position, because the Portfolio may be required to buy the security sold short at a time when the security has appreciated in value, and there is potentially no limit to the amount of such appreciation. Volatility in the market for equity securities, which has been dramatically increased recently for certain stocks, can meaningfully increase the risk of loss associated with short sales. In addition, by investing the proceeds received from selling securities short, a Portfolio could be deemed to be employing a form of leverage, which creates special risks. A Portfolio's long positions could decline in value at the same time that the value of the short positions increase, thereby increasing the Portfolio's overall potential for loss more than it would be without the use of leverage. Market or other factors may prevent a Portfolio from closing out a short position at the most desirable time or at a favorable price. In addition, a lender of securities may request, or market conditions may dictate, that securities sold short be returned to the lender on short notice. If this happens, the Portfolio may have to buy the securities sold short at an unfavorable price, which will potentially reduce or eliminate any gain or cause a loss to the Portfolio. When a Portfolio is selling a security short, it must maintain a segregated account of cash or high-grade securities equal to the margin requirement. As a result, a Portfolio may maintain high levels of cash or other liquid assets (such as U.S. Treasury bills, money market accounts, repurchase agreements, certificates of deposit, high quality commercial paper and long equity positions) or may utilize the collateral obtained from securities lending for this cash. The need to maintain cash or other liquid assets in segregated accounts could limit a Portfolio's ability to pursue other opportunities as they arise.

Sovereign Debt Securities Risk — Sovereign debt securities are subject to the risk that a governmental entity may delay or refuse to pay interest or repay principal on its sovereign debt for a variety of reasons including, for example, cash flow problems, insufficient foreign currency reserves, political considerations, the size of the governmental entity's debt position in relation to the economy, or the failure to put in place economic reforms required by the International Monetary Fund or other multilateral agencies. If a governmental entity defaults, it may ask for more time in which to pay or for further loans. In addition, there are generally no bankruptcy proceedings similar to those in the United States, by which defaulted sovereign debt obligations may be collected and there may be few or no effective legal remedies for collecting on such debt. Sovereign debt risk is increased for emerging market issuers. Certain emerging market or developing countries are among the largest debtors to commercial banks and foreign governments. At times, certain emerging market countries have declared moratoria on the payment of principal and interest on external debt. Certain emerging

market countries have experienced difficulties in servicing their sovereign debt on a timely basis, which has led to defaults and the restructuring of certain indebtedness.

Special Situations Risk — A Portfolio may seek to benefit from “special situations,” such as acquisitions, mergers, consolidations, bankruptcies, liquidations, reorganizations, restructurings, tender or exchange offers or other unusual events expected to affect a particular issuer. In general, securities of companies which are the subject of a tender or exchange offer or an acquisition, merger, consolidation, bankruptcy, liquidation, reorganization or restructuring proposal sell at a premium to their historic market price immediately prior to the announcement of the transaction. However, it is possible that the value of securities of a company involved in such a transaction will not rise and in fact may fall, in which case a Portfolio would lose money. It is also possible that a Sub-Adviser’s assessment that a particular company is likely to be acquired or acquired during a specific time frame may be incorrect, in which case a Portfolio may not realize any premium on its investment and could lose money if the value of the securities declines during the Portfolio’s holding period. A Portfolio’s return also could be adversely impacted to the extent that a Sub-Adviser’s strategies fail to identify companies for investment by the Portfolio that become the subject of a merger or similar transaction that results in an increase in the value of the securities of those companies. Moreover, publicly announced mergers and similar types of transactions may be renegotiated or terminated, in which case a Portfolio may lose money. In addition, if a transaction takes a longer time to close than a Sub-Adviser originally anticipated, a Portfolio may realize a lower-than-expected rate of return. In some circumstances, the securities purchased may be illiquid making it difficult for the Portfolio to dispose of them at an advantageous price.

Technology Sector Risk — The value of the shares of a Portfolio that invests primarily in technology companies is particularly vulnerable to factors affecting the technology sector, such as dependency on consumer and business acceptance as new technology evolves, large and rapid price movements resulting from competition, rapid obsolescence of products and services and short product cycles. Many technology companies are small and at an earlier stage of development and, therefore, may be subject to risks such as those arising out of limited product lines, markets and financial and managerial resources. The value of a Portfolio’s shares could experience significantly greater volatility than the value of shares of portfolios investing more broadly.

U.S. Government Securities Risk — Although a Portfolio may hold securities that carry U.S. government guarantees, these guarantees do not extend to shares of the Portfolio itself and do not guarantee the market prices of the securities. Securities issued by the U.S. Treasury or other agencies and instrumentalities of the U.S. government may decline in value as a result of, among other things, changes in interest rates, political events in the United States, international developments, including strained relations with foreign countries, and changes in the credit rating of, or investor perceptions regarding the creditworthiness of, the U.S. government. Rating services have in the past lowered their long-term sovereign credit rating on the United States. Furthermore, not all securities issued by the U.S. government and its agencies and instrumentalities are backed by the full faith and credit of the U.S. Treasury. Some are backed by the issuer’s right to borrow from the U.S. Treasury, while others are backed only by the credit of the issuing agency or instrumentality. Securities not backed by the full faith and credit of the U.S. Treasury involve greater credit risk than investments in other types of U.S. government securities. The maximum potential liability of the issuers of some U.S. government securities may greatly exceed their current resources, including their legal right to support from the U.S. Treasury. It is possible that these issuers will not have the funds to meet their payment obligations in the future. Increases or decreases in the demand for U.S. government securities may occur at any time and may result in increased volatility in the values of those securities.

Utilities Concentration Risk — The utilities sector in general is subject to significant governmental regulation and review, which may result in limitations or delays with regard to changes in the rates that companies in this sector charge their customers. Other risk factors that may affect utility companies include the risk of increases in fuel and other operating costs; the high cost of borrowing to finance capital construction during inflationary periods; restrictions on operations and increased costs and delays associated with compliance with environmental and safety regulations; the potential impact of natural or man-made disasters; difficulties in obtaining natural gas or other key inputs; risks related to the construction and operation of power plants; the effects of energy conservation and the effects of regulatory changes. Any of these factors could result in a material adverse impact on a Portfolio’s securities and the performance of the Portfolio. The value of a Portfolio’s shares could experience significantly greater volatility than the value of shares of portfolios investing more broadly.

Variable and Floating Rate Securities Risk — The market prices of securities with variable and floating interest rates are generally less sensitive to interest rate changes than are the market prices of securities with fixed interest rates. Variable and floating rate securities may decline in value if market interest rates or interest rates paid by such securities do not move as expected. Conversely, variable and floating rate securities will not generally rise in value if market interest rates decline. Certain types of floating rate securities, such as interests in bank loans, may be subject to greater liquidity risk than other debt securities.

Certain variable and floating rate securities have an interest rate floor feature, which prevents the interest rate payable by the security from dropping below a specified level as compared to a reference interest rate (the “reference rate”). Such a floor protects a Portfolio from losses resulting from a decrease in the reference rate below the specified level. However, if the reference rate is below the floor, there will be a lag between a rise in the reference rate and a rise in the interest rate payable by the security, and a Portfolio may not

benefit from increasing interest rates for a significant period of time. Rates on certain variable rate securities typically reset only periodically. As a result, changes in prevailing interest rates, particularly sudden and significant changes, can cause some fluctuations in a Portfolio's value to the extent that it invests in variable rate securities.

Volatility Management Risk — The Adviser (or a Sub-Adviser, as the case may be) from time to time may employ various volatility management techniques or make strategic adjustments to a Portfolio's asset mix (such as by using ETFs or futures and options to manage equity exposure) in managing certain Portfolios. Although these actions are intended to reduce the overall risk of investing in a Portfolio, they may not work as intended and may result in losses by a Portfolio or periods of underperformance, particularly during periods when market values are increasing but market volatility is high or when a Portfolio has reduced its equity exposure but market changes do not impact equity returns adversely to the extent predicted by the Adviser (or a Sub-Adviser). Volatility is a statistical measure of the magnitude of changes in a portfolio's returns. A higher volatility level generally indicates higher risk and often results in more frequent and sometimes significant changes in a portfolio's returns.

The result of a Portfolio's volatility management strategy will be subject to the Adviser's (or a Sub-Adviser's) ability to correctly assess the degree of correlation between the performance of the relevant market index and the metrics used by the Adviser (or a Sub-Adviser) to measure market volatility. Since the characteristics of many securities change as markets change or time passes, the result of a Portfolio's volatility management strategy also will be subject to the Adviser's (or a Sub-Adviser's) ability to continually recalculate, readjust, and execute volatility management techniques in an efficient manner. In addition, market conditions change, sometimes rapidly and unpredictably, and the Adviser (or a Sub-Adviser) may be unable to execute the volatility management strategy in a timely manner or at all.

The Adviser (or a Sub-Adviser) uses proprietary modeling tools to implement a Portfolio's volatility management strategy. If the proprietary modeling tools prove to be flawed or for other reasons do not produce the desired results, any decisions based on the modeling tools may expose a Portfolio to additional risks and losses. The use of modeling tools has inherent risks, and the success of using a modeling tool depends, among other things, on the accuracy and completeness of the tool's development, implementation and maintenance; on the tool's assumptions and methodologies; and on the accuracy and reliability of the inputs and output of the tool. The Adviser (or a Sub-Adviser) from time to time may make changes to its proprietary modeling tools that do not require shareholder notice.

Moreover, volatility management strategies may expose a Portfolio to costs, such as increased portfolio transaction costs, which could cause or increase losses or reduce gains. In addition, it is not possible to manage volatility fully or perfectly. Futures contracts and other instruments used in connection with the volatility management strategy are not necessarily held by a Portfolio to hedge the value of the Portfolio's other investments and, as a result, these futures contracts and other instruments may decline in value at the same time as the Portfolio's other investments. When equity exposure is reduced, a lack of correlation between the changes in the value of the futures contracts or other instruments used in connection with the volatility management strategy and the value of a Portfolio's other equity investments (if any) being hedged could result in losses.

Any one or more of these factors could prevent a Portfolio from achieving the intended volatility management or could cause a Portfolio to underperform or experience losses (some of which may be sudden or substantial) or volatility for any particular period that may be higher or lower. In addition, the use of volatility management techniques may not protect against market declines and may limit a Portfolio's participation in market gains, even during periods when the market is rising. Volatility management techniques, when implemented effectively to reduce the overall risk of investing in a Portfolio, may result in underperformance by a Portfolio. For example, if a Portfolio has reduced its overall exposure to equities to avoid losses in certain market environments, the Portfolio may forgo some of the returns that can be associated with periods of rising equity values. A Portfolio's performance may be lower than the performance of similar funds where volatility management techniques are not used. In addition, the Adviser and its insurance company affiliates manage or advise other funds and accounts that engage in and compete for transactions in the same types of securities and instruments (such as futures contracts) as a Portfolio. Such transactions could affect the prices and availability of the securities and instruments in which a Portfolio invests, directly or indirectly, and could have an adverse impact on a Portfolio's performance.

Insurance companies issuing guaranteed benefits on variable annuity and insurance contracts investing in a Portfolio have a financial interest in preserving the value of the Portfolio and reducing its volatility due to their obligations for these guaranteed benefits (the cost of providing these guaranteed benefits is related to several factors, including the performance and volatility of the Portfolio). To the extent a Portfolio is successful in managing the volatility of returns and downside risk, the insurance companies issuing guaranteed benefits on variable annuity and insurance contracts investing in the Portfolio will also benefit from a reduction in their potential investment risk which will reduce their costs of hedging this risk and could reduce their reserve and capital requirements. These financial benefits to the insurance companies could be significant.

When-Issued and Delayed Delivery Securities and Forward Commitments Risk — When-issued and delayed delivery securities and forward commitments involve the risk that the security a Portfolio commits to purchase will decline in value prior to its delivery. This risk is in addition to the risk that a Portfolio's other assets will decline in value. Therefore, these transactions can have a leverage-like effect on a Portfolio and increase a Portfolio's overall investment exposure. There also is the risk that the security will not be issued or that the other party to the transaction will fail to complete the sale or purchase of the security. If this occurs, a Portfolio may lose the opportunity to purchase or sell the security at the agreed upon price and may forgo any gain in the security's price. These transactions also may cause a Portfolio to liquidate positions when it may not be advantageous to do so, in order to satisfy its purchase obligations.

Zero Coupon and Pay-in-Kind Securities Risk — Zero coupon and pay-in-kind securities are debt securities that do not make periodic cash interest payments. Zero coupon securities are issued at a significant discount from their face value. Zero coupon and pay-in-kind securities tend to be subject to greater fluctuations in market value in response to changing interest rates than securities of comparable maturities that pay interest periodically and in cash. Pay-in-kind securities generally carry higher interest rates compared to debt securities that make cash payments of interest to reflect the increased risks associated with the deferral of interest payments. Pay-in-kind securities also generally involve greater credit risk than coupon bonds because a Portfolio receives no cash payments until the maturity date or a specified cash payment date. Even if accounting conditions are met for accruing income payable at a future date under a pay-in-kind security, the issuer could still default when the collection date occurs at the maturity of or payment date for the security. If the issuer of a pay-in-kind security defaults, a Portfolio may lose its entire investment. Pay-in-kind securities also may be difficult to value accurately because they involve ongoing judgments about the collectability of the deferred payments and the value of any associated collateral.

In addition, current federal income tax law requires the holder of a zero coupon security or certain pay-in-kind securities to accrue income with respect to these securities on a current basis, even though it does not receive that income currently in cash. To maintain its qualification as a regulated investment company under the Internal Revenue Code and avoid federal tax liability at the entity (Portfolio) level, a Portfolio may be required to distribute income accrued with respect to these securities and may have to dispose of portfolio securities under disadvantageous circumstances in order to generate cash to satisfy these distribution requirements.

General Investment Risks

Each Portfolio is subject to the following general risks. The risks, which are described in alphabetical order and not in order of perceived importance or potential exposure, can negatively affect a Portfolio's performance.

Asset Class Risk — A Portfolio is subject to the risk that the returns from the asset classes, or types of securities, in which it invests will underperform the general securities markets or different asset classes. Different asset classes tend to go through cycles of outperformance and underperformance in comparison to each other and to the general securities markets.

Cybersecurity and Operational Risk — A Portfolio and its service providers, and shareholders' ability to transact with a Portfolio, may be negatively impacted due to operational risks arising from, among other problems, human errors, systems and technology disruptions or failures, or cybersecurity incidents. Cybersecurity incidents may allow an unauthorized party to gain access to Portfolio assets, customer data, or proprietary information, or cause a Portfolio or its service providers, as well as securities trading venues and their service providers, to suffer data corruption or lose operational functionality. Cybersecurity incidents can result from deliberate attacks (e.g., malicious software coding, ransomware, or "hacking") or unintentional events (e.g., inadvertent release of confidential information, including by a Portfolio or its service providers). Geopolitical tensions may increase the scale and sophistication of deliberate attacks, particularly those from nation-states or from entities with nation-state backing. Technology is continuously changing, and new ways to carry out cyber attacks are always developing. A cybersecurity incident could, among other things, result in the loss or theft of customer data or funds, customers or employees being unable to access electronic systems ("denial of services"), loss or theft of proprietary information or corporate data, physical damage to a computer or network system, or remediation costs associated with system repairs. Any of these results could have a substantial adverse impact on a Portfolio and its shareholders.

The occurrence of any of these problems could result in a loss of information, the inability to process Portfolio transactions or calculate a Portfolio's net asset value, violations of applicable privacy and other laws, regulatory scrutiny, penalties, fines, reputational damage, additional compliance costs or other consequences, any of which could have a material adverse effect on a Portfolio or its shareholders. The Adviser, through its monitoring and oversight of Portfolio service providers, seeks to determine that service providers take appropriate precautions to avoid and mitigate risks that could lead to such problems. However, it is not possible for the Adviser or Portfolio service providers to identify all of the cybersecurity or other operational risks that may affect a Portfolio or to develop processes and controls to completely eliminate or mitigate their occurrence or effects. Among other situations, disruptions (for example, pandemics or health crises) or other developments that cause prolonged periods of remote work or significant employee absences at a Portfolio's service providers could impact the ability to conduct the Portfolio's operations. A Portfolio may incur substantial costs to prevent or address cybersecurity incidents.

Most issuers in which a Portfolio invests are heavily dependent on computers for data storage and operations and require ready access to the internet to conduct their businesses. Thus, cybersecurity incidents could also affect issuers of securities in which a Portfolio invests, which could result in material adverse consequences for such issuers and may cause the Portfolio's investments in the securities of such issuers to lose value.

Insurance Fund Risk — The Portfolios are available through Contracts offered by insurance company affiliates of the Adviser, and the Portfolios may be used to fund all or a portion of certain benefits and guarantees available under the Contracts. To the extent the assets in a Portfolio are insufficient to fund those benefits and guarantees, the Adviser's insurance company affiliates might otherwise be obligated to fulfill them out of their own resources. The Adviser is subject to conflicts of interest in connection with providing advice to, or developing strategies and modeling tools used to manage, a Portfolio (e.g., with respect to the allocation of assets between passively and actively managed portions of a Portfolio and the development and implementation of the modeling tools used to manage a Portfolio). The performance of a Portfolio could impact the obligations and financial exposure of the Adviser's insurance company affiliates under any death benefit, income benefit and other guarantees provided through Contracts that offer the Portfolio as an investment option, and the ability of an insurance company affiliate to manage (e.g., through the use of various hedging techniques) the risks associated with these benefits and guarantees. The Adviser's investment decisions and the design of the Portfolios could be influenced by these factors. For example, the Portfolios or modeling tools and strategies may be managed or designed in a manner (e.g., using more conservative or less volatile investment styles, including volatility management strategies) that could reduce potential losses and/or mitigate financial risks to insurance company affiliates that provide the benefits and guarantees and offer the Portfolios as investment options in their products, and also could facilitate such an insurance company's ability to provide benefits and guarantees under its Contracts, including by making more predictable the costs of the benefits and guarantees and by reducing the regulatory capital needed to provide them. The financial benefits to the Adviser's insurance company affiliates could be material. The performance of a Portfolio also could adversely impact the value of Contracts that offer the Portfolio as an investment option and could suppress the value of the benefits and guarantees offered under a Contract. Please refer to your Contract prospectus for more information about any benefits and guarantees offered under the Contract.

Issuer-Specific Risk — The value of an individual security can be more volatile than the market as a whole and can perform differently from the market as a whole. Any issuer of securities may perform poorly, causing the value of its securities to decline. Poor performance may be caused by a variety of factors, such as poor management decisions; reduced demand for the issuer's goods or services; competitive pressures; negative perception in the marketplace; loss of major customers; changes in technology; investigations or other controversies related to the issuer; strategic initiatives such as mergers, acquisitions or dispositions and the market response to any such initiatives; fraudulent disclosures; and the historical and prospective earnings of the issuer and the value of its assets. Certain unanticipated events, such as litigation or natural disasters, can have a dramatic adverse effect on the value of an issuer's securities. A change in the financial condition of (or other event affecting) a single issuer may affect securities markets as a whole.

Recent Market Conditions Risk — U.S. and international markets have experienced significant volatility in recent months and years. As a result of such volatility, investment returns may fluctuate significantly. Global economies and financial markets are highly interconnected, which increases the likelihood that conditions in one country or region will adversely impact issuers in a different country or region.

Due to concerns regarding recent high inflation in many sectors of the U.S. and global economies, the U.S. Federal Reserve ("Fed") and many foreign central banks and monetary authorities raised interest rates and implemented other policy initiatives in an effort to control inflation, and they may continue to do so. It is difficult to predict the timing, frequency, magnitude or direction of further interest rate changes, and the evaluation of macro-economic and other conditions or events could cause a change in approach in the future. Fixed-income and related markets may continue to experience heightened levels of interest rate and price volatility. Inflation risk is the uncertainty over the future real value (after inflation) of an investment. A Portfolio's investments may not keep pace with inflation, and the value of an investment in a Portfolio may be eroded over time by inflation. Changes in government or central bank policies could negatively affect the value and liquidity of a Portfolio's investments and cause it to lose money, and there can be no assurance that the initiatives undertaken by governments and central banks will be successful.

The Fed's or foreign central banks' actions may result in an economic slowdown in the United States and abroad. There are concerns that monetary policy may provide less support should economic growth slow. An economic slowdown may negatively affect national and global economies, as well as national and global securities and commodities markets, and may continue for an extended period of time and have unforeseen impacts. Any deterioration in economic fundamentals may increase the risk of default or insolvency of particular issuers, negatively impact market values, cause credit spreads to widen, and reduce bank balance sheets. Any of these could cause an increase in market volatility, reduce liquidity across various markets, or decrease confidence in the markets.

In March 2023, the shutdown of certain financial institutions raised economic concerns over disruption in the U.S. banking system. There can be no certainty that the actions taken by the U.S. government to strengthen public confidence in the U.S. banking system will be effective in mitigating the effects of financial institution failures on the economy and restoring public confidence in the

U.S. banking system. In addition, widespread loan defaults in the commercial real estate sector could have a cascading effect on the broader banking system, straining the financial health of lending institutions and potentially causing more banks to fail.

High public debt in the United States and other countries creates ongoing systemic and market risks and policymaking uncertainty, and there has been a significant increase in the amount of debt due to the economic effects of the coronavirus disease (COVID-19) pandemic and ensuing economic relief and public health measures. Economic, political and other developments may result in a further increase in the amount of public debt, including in the United States. The long-term consequences of high public debt are not known, but high levels of public debt may negatively affect economic conditions and the value of markets, sectors and companies in which a Portfolio invests.

Political and diplomatic events within the United States, including a contentious domestic political environment, changes in political party control of one or more branches of the U.S. government, the U.S. government's inability at times to agree on a long-term budget and deficit reduction plan, a U.S. government shutdown (or the threat of such a shutdown), and disagreements over, or threats not to increase, the U.S. government's borrowing limit (or "debt ceiling"), as well as political and diplomatic events abroad, may affect investor and consumer confidence and may adversely impact financial markets and the broader economy, perhaps suddenly and to a significant degree. A downgrade of the ratings of U.S. government debt obligations, or concerns about the U.S. government's credit quality in general, could have a substantial negative effect on the U.S. and global economies. Moreover, although the U.S. government has honored its credit obligations, there remains a possibility that the United States could default on its obligations. The consequences of such an unprecedented event are impossible to predict, but it is likely that a default by the United States would be highly disruptive to the U.S. and global securities markets and could significantly impair the value of the Portfolios' investments.

Tensions, war, or other open conflicts between nations, such as between Russia and Ukraine, in the Middle East, and in eastern Asia, the resulting responses by the United States and other countries, and the potential for wider conflict have had, and could continue to have, severe adverse effects on regional and global economies and could further increase volatility and uncertainty in the financial markets. The extent and duration of ongoing hostilities or military actions and the repercussions of such actions are impossible to predict. These events have resulted in, and could continue to result in, significant market disruptions, including in certain industries or sectors such as the oil and natural gas markets, and may further strain global supply chains and negatively affect inflation and global growth. The resulting adverse market conditions could be prolonged. These and any related events could significantly impact a Portfolio's performance and the value of an investment in a Portfolio, whether or not the Portfolio invests in securities of issuers located in or with significant exposure to the countries or regions directly affected.

Certain illnesses spread rapidly and have the potential to significantly and adversely affect the global economy and have material adverse impacts on a Portfolio. Public health crises caused by outbreaks of infectious diseases or other public health issues may disrupt market conditions and operations and economies around the world, exacerbate other pre-existing economic, political, and social tensions and risks, and negatively affect market performance and the value of investments in individual companies in significant and unforeseen ways. The impact of any outbreak may last for an extended period of time. For example, the impact of the COVID-19 pandemic caused significant volatility and severe losses in global financial markets. The COVID-19 pandemic and efforts to contain its spread resulted in significant disruptions to business operations, supply chains and customer activity, higher default rates, widespread business closures and layoffs, travel restrictions and border closings, extended quarantines and stay-at-home orders, event and service cancellations, labor shortages, and significant challenges in healthcare service preparation and delivery, as well as general concern, uncertainty and social unrest. The continued impact of COVID-19 is uncertain. Other outbreaks of infectious diseases or other public health issues that may arise in the future may have similar or worse effects.

Slowing global economic growth, the rise in protectionist trade policies, and changes to some major international trade agreements (including, for example, the trade agreement between the United Kingdom and the European Union) could affect the economies of many countries in ways that cannot necessarily be foreseen at the present time. The United States has developed increasingly strained relations with a number of foreign countries. If relations with certain countries deteriorate, it could adversely affect U.S. issuers as well as non-U.S. issuers that rely on the United States for trade. For example, the United States has imposed tariffs and other trade barriers on Chinese exports, has restricted sales of certain categories of goods to China, and has established barriers to investments in China. In addition, the Chinese government is involved in a longstanding dispute with Taiwan that has included threats of invasion. If relations between the United States and China do not improve or continue to deteriorate, or if China were to attempt unification of Taiwan by coercion or force, economies, markets and individual securities may be severely affected both regionally and globally, and the value of a Portfolio's investments may go down.

Advancements in technology may also adversely impact market movements and liquidity and may affect the overall performance of a Portfolio. For example, the advanced development and increased regulation of artificial intelligence may impact the economy and the performance of a Portfolio. As artificial intelligence is used more widely, the profitability and growth of a Portfolio's holdings may be impacted, which could impact the overall performance of a Portfolio.

In addition, global climate change may have a significant adverse effect on property and security values. A rise in sea levels, changes in weather patterns, an increase in powerful storms and/or an increase in flooding could cause real estate properties to lose value or become unmarketable altogether. Unlike previous declines in the real estate market, properties in affected zones may never recover their value. Large wildfires have devastated, and in the future may devastate, entire communities and may be very costly to any business found to be responsible for the fire or conducting operations in affected areas. Regulatory changes and divestment movements in the United States and abroad tied to concerns about climate change could adversely affect the value of certain land and the viability of industries whose activities or products are seen as accelerating climate change. Losses related to climate change could adversely affect corporate borrowers and mortgage lenders, the value of mortgage-backed securities, the bonds of municipalities that depend on tax revenues and tourist dollars generated by affected properties, and insurers of the properties and/or of corporate, municipal or mortgage-backed securities. Because property and security values are driven largely by buyers' perceptions, it is difficult to know the time period over which these market effects might unfold.

All of these risks may have a material adverse effect on the performance and financial condition of the companies and other issuers in which a Portfolio invests, and on the overall performance of a Portfolio.

Regulatory Risk — Each Portfolio is subject to extensive laws and regulations that govern its operations. Each Portfolio is subject to regulation by the Securities and Exchange Commission ("SEC") and certain Portfolios are also subject to regulation by the Commodity Futures Trading Commission ("CFTC"). Each Portfolio is also subject to regulations imposed by other governmental regulatory authorities and self-regulatory organizations. Similarly, the businesses and other issuers of the securities and other instruments in which a Portfolio invests are also subject to considerable regulation. These laws and regulations are subject to change. Extensive regulation or a change in existing laws or regulations may have unpredictable and unintended effects and may materially impact a Portfolio, a security, business, sector or market. For example, extensive regulation or a change in existing laws or regulations made by the government or a regulatory body may limit or preclude a Portfolio's ability to achieve its investment objective, impact a Portfolio's investment policies or strategies, adversely affect a Portfolio's efficiency in implementing its investment strategies, and/or reduce the attractiveness or increase the cost of an investment, which may, in turn, adversely affect a Portfolio's performance. A Portfolio also may incur additional costs, which may be substantial, to comply with new requirements as well as to monitor for compliance with new requirements going forward. A Portfolio also may be adversely affected by changes in the interpretation or enforcement of existing laws or regulations. Changes in laws or regulations also may impair the operation of the U.S. or other securities markets. The Adviser is registered with the SEC as an investment adviser under the Investment Advisers Act of 1940, as amended. The Adviser also is registered with the CFTC as a commodity pool operator ("CPO") under the Commodity Exchange Act, as amended, and, with respect to Portfolios that employ derivatives investments to a greater extent, serves as a CPO. Being subject to dual regulation by the SEC and CFTC may increase compliance costs, which may be borne by a Portfolio and may affect the Portfolio's returns.

Risk Management — The Adviser and Sub-Advisers undertake certain analyses with the intention of identifying particular types of risks and reducing a Portfolio's exposure to them. However, risk is an essential part of investing, and the degree of return an investor might expect is often tied to the degree of risk the investor is willing to accept. By its very nature, risk involves exposure to the possibility of adverse events. Accordingly, no risk management program can eliminate a Portfolio's exposure to such events; at best, it can only reduce the possibility that the Portfolio will be affected by adverse events, and especially those risks that are not intrinsic to the Portfolio's investment program. While the prospectus describes material risk factors associated with a Portfolio's investment program, there is no assurance that as a particular situation unfolds in the markets, the Adviser or Sub-Advisers will identify all of the risks that might affect the Portfolio, rate their probability or potential magnitude correctly, or be able to take appropriate measures to reduce the Portfolio's exposure to them. Measures taken with the intention of decreasing exposure to identified risks might have the unintended effect of increasing exposure to other risks.

Sub-Adviser Selection Risk — A Portfolio is subject to the risk that the Adviser's process for selecting or replacing a Sub-Adviser and its decision to select or replace a Sub-Adviser does not produce the intended results.

In addition, the Adviser is subject to certain conflicts of interest in connection with recommending the appointment and continued service of Sub-Advisers. If the Adviser is affiliated with a Sub-Adviser, the Adviser will benefit not only from the net advisory fees the Adviser retains, but also from the sub-advisory fees paid by the Adviser to the affiliated Sub-Adviser. Since the Adviser pays fees to the Sub-Advisers from the advisory fees that it earns from the Portfolios, any increase or decrease in the sub-advisory fees negotiated with proposed or current Sub-Advisers will result in a corresponding decrease or increase, respectively, in the amount of the advisory fees retained by the Adviser. The Adviser or its affiliates also have distribution relationships with certain Sub-Advisers or their affiliates under which the Sub-Advisers or their affiliates distribute or support the distribution of investment products issued or sold by the Adviser or its affiliates, which could financially benefit the Adviser and its affiliates or provide an incentive to the Adviser in selecting one Sub-Adviser over another. In addition, the Adviser's and/or its affiliates' other existing or potential business relationships, including with Sub-Advisers and/or their affiliates, or other financial or personal relationships, could influence the Adviser's selection and retention or termination of Sub-Advisers. When recommending the appointment or continued service of a Sub-Adviser, consistent with its fiduciary duties, the Adviser relies primarily on the qualitative and quantitative factors described in detail in the Prospectus.

Valuation Risk — The price at which a Portfolio sells any particular investment may differ from the Portfolio's valuation of the investment. Such differences could be significant, particularly for illiquid securities and securities that trade in relatively thin markets and/or markets that experience extreme volatility. If market or other conditions make it difficult to value some investments, SEC rules and applicable accounting protocols may require a Portfolio to value these investments using more subjective methods, known as fair value methodologies. Using fair value methodologies to price investments may result in a value that is different from an investment's most recent closing price and from the prices used by other mutual funds to calculate their net asset values. An investment's valuation may differ depending on the method used for determining value. Investors who purchase or redeem Portfolio shares on days when the Portfolio is holding fair-valued securities may receive fewer or more shares, or lower or higher redemption proceeds, than they would have received if the Portfolio had not held fair-valued securities or had used a different valuation methodology. The value of foreign securities, certain futures and fixed income securities, and currencies may be materially affected by events after the close of the markets on which they are traded but before a Portfolio determines its net asset value. A Portfolio uses pricing services to provide values for certain securities, and there is no assurance that a Portfolio will be able to sell an investment at the price provided by such pricing services. Different pricing services use different valuation methodologies, potentially resulting in different values for the same investments. As a result, if a Portfolio were to change pricing services, or if a pricing service were to change its valuation methodology, the value of the Portfolio's investments could be impacted. A Portfolio's ability to value its investments in an accurate and timely manner may be impacted by technological issues and/or errors by third party service providers, such as pricing services or accounting agents.

Additional Information about Risks

Additional information that may be associated with a Portfolio's principal risks but that may not be principal to a Portfolio's investment strategies follows. The risks, which are described in alphabetical order and not in order of perceived importance or potential exposure, can negatively affect a Portfolio's performance.

Banking Industry Sector Risk — To the extent a Portfolio invests in the banking industry, it is exposed to the risks generally associated with such industry, including interest rate risk, credit risk and the risk that regulatory or other developments relating to the banking industry may affect its investment. The value of a Portfolio's shares could experience significantly greater volatility than the value of shares of portfolios investing more broadly.

In March 2023, the shutdown of certain financial institutions raised economic concerns over disruption in the U.S. banking system. There can be no certainty that the actions taken by the U.S. government to strengthen public confidence in the U.S. banking system will be effective in mitigating the effects of financial institution failures on the economy and restoring public confidence in the U.S. banking system. In addition, widespread loan defaults in the commercial real estate sector could have a cascading effect on the broader banking system, straining the financial health of lending institutions and potentially causing more banks to fail.

Concentration Risk — If an Underlying ETF concentrates, or invests a higher percentage of its assets, in the securities of a particular issuer or issuers in a particular country, group of countries, region, market, industry, group of industries, sector or asset class, that Underlying ETF may be adversely affected by the performance of those securities, may be subject to increased price volatility, and may be more susceptible to adverse economic, market, political or regulatory occurrences affecting that issuer or issuers, country, group of countries, region, market, industry, group of industries, sector or asset class.

Counterparty Risk — A Portfolio may sustain a loss as a result of the insolvency or bankruptcy of, or other non-compliance or non-performance by, another party to a transaction.

Distressed Companies Risk — A Portfolio may invest in distressed debt securities, including loans, bonds and notes, many of which are not publicly traded and may involve a substantial degree of risk. Debt obligations of distressed companies typically are unrated, lower-rated or close to default. Distressed debt securities include securities of companies that are in financial distress and that may be in or about to enter bankruptcy. In certain periods, there may be little or no liquidity in the markets for these securities. In addition, the prices of such securities may be subject to periods of abrupt and erratic market movements and above-average price volatility. It may be difficult to obtain financial information regarding the financial condition of a borrower or issuer, and its financial condition may change rapidly. It may be more difficult to value such securities and the spread between the bid and asked prices of such securities may be greater than expected. A Portfolio may lose a substantial portion or all of its investment in such securities or it may be required to accept cash, securities or other property with a value less than the Portfolio's original investment. Defaulted debt securities involve risks such as the possibility of complete loss of the investment where the issuer does not restructure to enable it to resume principal and interest payments. If the issuer of a security held by a Portfolio defaults, the Portfolio may experience a significant or complete loss on the security. Securities tend to lose much of their value before the issuer defaults. A Portfolio may incur additional expenses to the extent it is required to seek recovery upon a default in the payment of principal or interest on its portfolio holdings.

Financial Services Sector Risk — To the extent a Portfolio invests in the financial services sector, the value of the Portfolio's shares may be particularly vulnerable to factors affecting that sector, such as the availability and cost of capital funds, changes in interest

rates, the rate of corporate and consumer debt defaults, extensive government regulation and price competition. The financial services sector is also a target for cyberattacks. Cybersecurity incidents and technology malfunctions and failures have become increasingly frequent and have caused significant losses to companies in this sector, which may negatively impact a Portfolio. The value of a Portfolio's shares could experience significantly greater volatility than the value of shares of portfolios investing more broadly.

Industrials Sector Risk — The value of securities issued by companies in the industrials sector may be adversely affected by supply and demand changes related to their specific products or services and industrials sector products in general. The products of manufacturing companies may face obsolescence due to rapid technological developments and frequent new product introduction. Global events and changes in government regulations, economic conditions and exchange rates may adversely affect the performance of companies in the industrials sector. Companies in the industrials sector may be adversely affected by liability for environmental damage and product liability claims. The industrials sector may also be adversely affected by changes or trends in commodity prices, which may be influenced by unpredictable factors. Companies in the industrials sector, particularly aerospace and defense companies, may also be adversely affected by government spending policies because companies in this sector tend to rely to a significant extent on government demand for their products and services. Any of these factors could result in a material adverse impact on a Portfolio's securities and the performance of a Portfolio.

Inverse Floaters Risk — Inverse floaters are securities with a floating or variable rate of interest (i.e., the rate of interest varies with changes in specified market rates or indices, such as the prime rate, or at specified intervals). Inverse floaters have interest rates that tend to move in the opposite direction as the specified market rates or indices and may exhibit substantially greater price volatility than fixed rate obligations having similar credit quality, redemption provisions and maturity. Any increase in the reference rate of an inverse floater (as a consequence of an increase in interest rates) causes a drop in the coupon rate, while any drop in the reference rate of an inverse floater causes an increase in the coupon rate. Inverse floaters generally will underperform the market for fixed rate securities in a rising interest rate environment. Inverse floaters typically involve leverage, which can magnify a Portfolio's losses; accordingly, the holder of an inverse floater could lose more than its principal investment.

LIBOR Risk — Prior to June 30, 2023, many debt securities, derivatives and other financial instruments utilized the London Interbank Offered Rate (or "LIBOR") as the reference or benchmark rate for variable interest rate calculations; however, LIBOR settings for all maturities and currencies ceased to be published on a representative basis after June 30, 2023.

The Secured Overnight Financing Rate ("SOFR") has been selected by a committee established by the Board of Governors of the Federal Reserve System and the Federal Reserve Bank of New York to replace LIBOR as a reference or benchmark rate in the United States. Bank working groups and regulators in other countries have suggested other alternatives for their respective markets. However, there are risks associated with using a new reference or benchmark rate with respect to existing or new investments and transactions. The SOFR or other alternative reference or benchmark rate may be an ineffective substitute with respect to an existing or new investment or transaction, resulting in prolonged adverse market conditions for a Portfolio, which could negatively affect the Portfolio's performance and/or net asset value.

SOFR is a broad measure of the cost of borrowing cash overnight collateralized by U.S. Treasury securities. The composition and characteristics of SOFR are not the same as those of LIBOR, and SOFR is fundamentally different from LIBOR. SOFR is a secured rate, while LIBOR is an unsecured rate, and SOFR is an overnight rate, while LIBOR is a forward-looking rate that represents interbank funding over different maturities. As a result, there can be no assurance that SOFR will perform in the same way as LIBOR would have at any time, including as a result of changes in interest and yield rates in the market, market volatility, or global or regional economic, financial, political, regulatory, judicial or other events. In addition, daily changes in SOFR have, on occasion, been more volatile than daily changes in other benchmark or market rates, such as LIBOR. The return on and value of investments that are linked to SOFR may fluctuate more than the return on and value of investments that are linked to less volatile rates.

Various financial industry groups have planned for and have implemented the transition from LIBOR to SOFR or another new reference or benchmark rate, but, in certain instances, the transition process may have resulted in, or may result in, increased volatility and illiquidity in markets that relied on LIBOR to determine interest rates. It may also have caused, or lead to, a reduction in the values of some LIBOR-based investments and the effectiveness of new hedges placed against existing LIBOR-based instruments, which may adversely affect a Portfolio's performance or net asset value.

Municipal Securities Risk — Municipal securities risks include the inability of the issuer to repay the obligation, the relative lack of information about certain issuers of municipal securities, and the possibility of future legislative changes which could affect the market for and value of municipal securities.

Quantitative Investing Risk — A portfolio of securities selected using quantitative analysis may underperform the market as a whole or a portfolio of securities selected using a different investment approach, such as fundamental analysis. The factors used in quantitative analysis and the emphasis placed on those factors may not be predictive of a security's value. In addition, factors that affect a security's value can change over time and these changes may not be reflected in the quantitative model. The performance

of a quantitative model depends upon the quality of its design and effective execution under actual market conditions. Even a well-designed quantitative model cannot be expected to perform well in all market conditions or across all time intervals. Data for some companies, particularly for non-U.S. companies, may be less available and/or less current than data for other companies. There may also be errors in the computer code for the quantitative model or in the model itself, or issues relating to the computer systems used to screen securities. A Portfolio's securities selection can be adversely affected if it relies on erroneous or outdated data or flawed models or computer systems. As a result, a Portfolio may have a lower return than if the Portfolio were managed using a fundamental analysis or an index-based strategy that did not incorporate quantitative analysis. There can be no assurance that a quantitative model used in managing a Portfolio will perform as anticipated or enable the Portfolio to achieve its investment objective.

Risks of Investing in Other Investment Companies — When a Portfolio invests in other investment companies, it will indirectly bear its proportionate share of the fees and expenses incurred by those investment companies. These fees and expenses are in addition to the advisory fees and other expenses that the Portfolio and its shareholders bear directly in connection with the Portfolio's own operations. As a result, the Portfolio's shareholders will be subject to two layers of fees and expenses with respect to investments in the Portfolio. The cost of investing in the Portfolio, therefore, may be higher than the cost of investing in a mutual fund that invests directly in individual stocks and bonds. In addition, the Portfolio's net asset value is subject to fluctuations in the net asset values of the other investment companies in which it invests. The Portfolio is also subject to the risks associated with the securities or other investments in which the other investment companies invest, and the ability of the Portfolio to meet its investment objective will depend, to a significant degree, on the ability of the other investment companies to meet their respective investment objectives. The extent to which the investment performance and risks associated with the Portfolio correlate to those of a particular investment company will depend upon the extent to which the Portfolio's assets are allocated from time to time for investment in the investment company, which will vary. A Portfolio does not control the investments of the other investment companies, which may have different investment objectives and may engage in investment strategies that the Portfolio would not engage in directly. The other investment companies may change their investment objectives or policies without the approval of a Portfolio. If that were to occur, the Portfolio might be forced to withdraw its investment from the investment company at a time and price that is unfavorable to the Portfolio.

Securities Lending Risk — Securities lending exposes a Portfolio to counterparty risk, market risk on the loaned securities, and reinvestment risk on the cash collateral. A Portfolio may lend its portfolio securities to brokers, dealers, other financial institutions and other eligible persons in order to earn additional income on those securities. Generally, any such loan of portfolio securities will be contractually required to be continuously secured by collateral in the form of cash or U.S. government or agency securities with a value at least equal to the value of the securities loaned. A Portfolio may reinvest cash collateral in short-term, highly liquid investments, such as money market funds and repurchase agreements (including for purchases of securities that may be loaned). A Portfolio could lose money on its investment of cash collateral if the assets in which cash collateral is reinvested do not perform as well as the original loaned securities. Because cash collateral received by a Portfolio in securities lending transactions may be invested in money market funds, the investment return on cash collateral so invested by a Portfolio may be affected by investment advisory fees, administrative fees, service fees and other fees that are indirectly borne by the Portfolio, which would be in addition to the fees the Portfolio pays its service providers. Securities lending is a form of leverage, which may magnify both gains and losses. The risks of lending portfolio securities, as with other extensions of secured credit, also consist of possible delay in receiving additional collateral (to cover an increase in the market value of the loaned securities or a decrease in the value of any securities collateral) or in the recovery of the loaned securities or possible loss of rights in the collateral should the borrower fail financially. There is a risk that a borrower may default on its obligations to return loaned securities, which may result in a loss to a Portfolio. Securities loans are subject to termination by a Portfolio as lender or by the borrower at any time. If a Portfolio terminates a securities loan, it will forego any income on the loan after the termination. In addition, securities on loan may not be voted by a Portfolio, and there is a risk that a Portfolio may not be able to recall loaned securities in sufficient time to vote on material proxy matters. In addition, a Portfolio typically pays lending fees to the party that serves as the securities lending agent for the Portfolio and arranges loans under the securities lending program.

Structured Securities Risk — Because structured securities of the type in which a Portfolio may invest typically involve no credit enhancement, their credit risk generally will be equivalent to that of the underlying instruments. A Portfolio may invest in a class of structured securities that is either subordinated or unsubordinated to the right of payment of another class. Subordinated structured securities typically have higher yields and present greater risks than unsubordinated structured securities. Structured securities are typically sold in private placement transactions, and there currently is no active trading market for structured securities. Certain issuers of such structured securities may be deemed to be "investment companies" as defined in the 1940 Act. As a result, a Portfolio's investment in such securities may be limited by certain investment restrictions contained in the 1940 Act.

Tax Risk — A Portfolio is subject to the risk that the tax treatment of swap agreements and other derivative instruments, such as commodity-linked derivative instruments, including commodity index-linked notes and commodity options, futures, and options on futures, may be affected by future regulatory or legislative changes that could affect whether income from such investments

is “qualifying income” under Subchapter M of the Internal Revenue Code, or otherwise affect the character, timing and/or amount of a Portfolio’s taxable income or gains and distributions.

Unseasoned Companies Risk — Unseasoned companies are companies that have been in operation for less than three years, including operations of any predecessors. These securities may have limited liquidity and their prices may be very volatile.

Benchmarks and other Indexes

The performance of each Portfolio that has annual returns for at least one calendar year, as shown in the section “About the Portfolios — Investments, Risks, and Performance”, is compared to that of a broad-based securities market index and may also be compared to that of one or more additional securities market indexes, including a blended (or composite) index. Each Portfolio’s annualized rates of return are net of: (i) its advisory fees; and (ii) its other expenses. These rates are not the same as the actual return you would receive under your Contract.

A Portfolio’s investment performance will change over time with the value of its underlying investments, and recent performance may differ significantly from performance for the time periods shown in this Prospectus.

Securities market indexes are unmanaged and are not subject to fees and expenses typically associated with managed investment company portfolios. Securities market indexes are also not subject to contract and insurance-related expenses and charges. Investments cannot be made directly in a securities market index.

In addition, as discussed in this Prospectus, certain Portfolios (or portions thereof) seek to track the total return performance (before fees and expenses) of a particular index. The following provides additional information about these indexes, as well.

EQ/AB Dynamic Aggressive Growth Index is a hypothetical combination of unmanaged indexes. The composite index combines the total return of the Bloomberg U.S. Intermediate Government Bond Index at a weighting of 20%, the MSCI EAFE[®] Index at a weighting of 24%, the S&P MidCap 400[®] Index at a weighting of 5%, the S&P 500[®] Index at a weighting of 46% and the Russell 2000[®] Index at a weighting of 5%.

EQ/AB Dynamic Growth Index is a hypothetical combination of unmanaged indexes. The composite index combines the total return of the Bloomberg U.S. Intermediate Government Bond Index at a weighting of 30%, the MSCI EAFE[®] Index at a weighting of 21%, the S&P MidCap 400[®] Index at a weighting of 4%, the S&P 500[®] Index at a weighting of 41% and the Russell 2000[®] Index at a weighting of 4%.

EQ/AB Dynamic Moderate Growth Index is a hypothetical combination of unmanaged indexes. The composite index combines the total return of the Bloomberg U.S. Intermediate Government Bond Index at a weighting of 40%, the MSCI EAFE[®] Index at a weighting of 18%, the S&P MidCap 400[®] Index at a weighting of 4%, the S&P 500[®] Index at a weighting of 34% and the Russell 2000[®] Index at a weighting of 4%.

EQ/American Century Moderate Growth Allocation Index is a hypothetical combination of unmanaged indexes. The composite index combines the total return of the Bloomberg U.S. Credit Corporate 5-10 Year Index at a weighting of 40%, the MSCI EAFE[®] Index at a weighting of 18%, the S&P MidCap 400[®] Index at a weighting of 3%, the S&P 500[®] Index at a weighting of 36%, and the Russell 2000[®] Index at a weighting of 3%.

EQ/Franklin Moderate Allocation Index is a hypothetical combination of unmanaged indexes. The composite index combines the total return of the Bloomberg U.S. Treasury Bond 3-7 Year Index at a weighting of 45%, the MSCI EAFE[®] Index at a weighting of 26.5%, the S&P Midcap 400[®] Index at a weighting of 7.5%, the S&P 500[®] Index at a weighting of 17%, and the Russell 2000[®] Index at a weighting of 4%.

EQ/Goldman Sachs Growth Allocation Index is a hypothetical combination of unmanaged indexes. The composite index combines the net total return of the MSCI World 100% Hedged to USD Index at a weighting of 70% and total return of the Bloomberg U.S. Credit Corporate 5-10 Year Index at a weighting of 30%.

EQ/Goldman Sachs Moderate Growth Allocation Index is a hypothetical combination of unmanaged indexes. The composite index combines the net total return of the MSCI World 100% Hedged to USD Index at a weighting of 60% and total return of the Bloomberg U.S. 7-10 Year Treasury Bond Index at a weighting of 40%.

EQ/Invesco Moderate Allocation Index is a hypothetical combination of unmanaged indexes. The composite index combines the total return of the Bloomberg U.S. Intermediate Government Bond Index at a weighting of 50%, the MSCI EAFE[®] Index at a weighting of 20%, the S&P MidCap 400[®] Index at a weighting of 3.5%, the S&P 500[®] Index at a weighting of 23% and the Russell 2000[®] Index at a weighting of 3.5%.

EQ/Invesco Moderate Growth Allocation Index is a hypothetical combination of unmanaged indexes. The composite index combines the total return of the Bloomberg U.S. Credit Corporate 5-10 Year Index at a weighting of 40%, the MSCI EAFE[®] Index at a weighting of 24%, the S&P MidCap 400[®] Index at a weighting of 4%, the S&P 500[®] Index at a weighting of 28%, and the Russell 2000[®] Index at a weighting of 4%.

EQ/JPMorgan Growth Allocation Index is a hypothetical combination of unmanaged indexes. The composite index combines the total return of the MSCI World 100% Hedged to USD Index at a weighting of 65% and the Bloomberg U.S. Intermediate Treasury Index at a weighting of 35%.

Bloomberg Global Aggregate Index is a measure of global investment grade debt from twenty-eight local currency markets. This multi-currency benchmark includes treasury, government-related, corporate and securitized fixed-rate bonds from both developed and emerging markets issuers.

Bloomberg U.S. Aggregate Bond Index covers the U.S. dollar-denominated, investment-grade, fixed rate, taxable bond market of securities. The index includes bonds from the Treasury, government-related and corporate securities, agency fixed rate and hybrid adjustable mortgage pass through securities, asset-backed securities and commercial mortgage-backed securities.

Bloomberg U.S. Credit Corporate 5-10 Year Index is an unmanaged index that includes U.S. dollar-denominated, investment-grade, fixed-rate, taxable securities issued by industrial, utility and financial companies, with maturities between 5 and 10 years.

Bloomberg U.S. Treasury Bond 3-7 Year Index is an unmanaged index of securities consisting of all U.S. Treasury securities that have remaining maturities of 3 to 7 years.

Bloomberg U.S. Treasury Inflation-Linked Bond Index measures the performance of the US Treasury Inflation Protected Securities (TIPS) market. Federal Reserve holdings of US TIPS are not index eligible and are excluded from the face amount outstanding of each bond in the index. The US TIPS Index is a subset and the largest component of the Global Inflation-Linked Bond Index. US TIPS are not eligible for other Bloomberg nominal Treasury or broad-based aggregate bond indices. The US TIPS was launched in March 1997.

Bloomberg U.S. 7-10 Year Treasury Bond Index is an unmanaged index of securities consisting of all U.S. Treasury securities that have remaining maturities of 7 to 10 years.

Bloomberg U.S. Intermediate Government Bond Index is an unmanaged index of securities consisting of all U.S. Treasury and agency securities with remaining maturities of one to 10 years.

Bloomberg U.S. Intermediate Government/Credit Bond Index is an unmanaged, market value weighted index which includes Treasuries, government-related issues (i.e., agency, sovereign, supranational, and local authority debt), and investment grade corporate bonds with maturities of one to 10 years.

Bloomberg U.S. Intermediate Treasury Index measures U.S. dollar-denominated, fixed rate, nominal debt issued by the U.S. Treasury with maturities of 1 to 9.9999 years to maturity.

Bloomberg U.S. Long Government/Credit Bond Index is an unmanaged, market value weighted index covering investment grade, U.S. dollar-denominated, fixed-rate treasuries, and government-related and corporate securities with at least ten years to maturity.

Bloomberg World Government Inflation-Linked Bond Index measures the performance of the major government inflation-linked bond markets. The index is designed to include only those markets in which a global government linked fund is likely and able to invest. To be included a market must have aggregate issuance of \$4 billion or more and have minimum rating of A3/A- for G7 and eurozone issuers, Aa3/AA- otherwise, using the middle rating from Moody's, S&P and Fitch ("two out of three" rule).

DJ EuroSTOXX 50[®] Index Europe's leading blue-chip index for the eurozone, provides a blue-chip representation of supersector leaders in the eurozone. The index covers 50 stocks from 12 eurozone countries: Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal and Spain.

FTSE 100 Index is a market capitalization weighted index representing the performance of the 100 largest blue chip companies, listed on the London Stock Exchange, which meet the FTSE's size and liquidity screening.

FTSE EPRA/NAREIT Global (Net) Index is designed to track the performance of listed real estate companies and REITS in both developed and emerging markets.

ICE BofA 1-Year U.S. Treasury Note Index measures the returns of negotiable debt obligations issued by the U.S. government and backed by its full faith and credit, having a maturity of one year.

ICE BofA 3-Month U.S. Treasury Bill Index measures the returns of negotiable debt obligations issued by the U.S. government and backed by its full faith and credit, having a maturity of three months.

International Proxy Index is a hypothetical combination of unmanaged indexes. The composite index combines the total return of the DJ EuroSTOXX 50[®] Index at a weighting of 40%, the FTSE 100 Index at a weighting of 25%, the TOPIX Index at a weighting of 25% and the S&P/ASX 200 Index at a weighting of 10%.

Morgan Stanley Capital International (MSCI) ACWI (Net) Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of 23 developed markets and 24 emerging markets. The index covers approximately 85% of the global investment opportunities.

Morgan Stanley Capital International (MSCI) ACWI ex USA Growth (Net) Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of 22 developed markets (excluding the U.S.) and 24 emerging markets and has growth style characteristics.

Morgan Stanley Capital International (MSCI) EAFE[®] Index (Europe, Australasia, Far East) is a free float-adjusted market capitalization index that is designed to measure the equity market performance of developed markets, excluding the U.S. and Canada. The index consists of the following 21 developed market country indexes: Australia, Austria, Belgium, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, the Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, and the United Kingdom.

Morgan Stanley Capital International (MSCI) EAFE[®] Value (Net) Index captures large and mid-cap securities exhibiting overall value style characteristics across Developed Markets countries around the world, excluding the U.S. and Canada.

Morgan Stanley Capital International (MSCI) Emerging Markets (Gross Dividends) IndexSM is a free float-adjusted market capitalization index that is designed to measure equity market performance of emerging markets. The index consists of the following 24 emerging market country indexes: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Kuwait, Malaysia, Mexico, Peru, Philippines, Poland, Qatar, Saudi Arabia, South Africa, Taiwan, Thailand, Turkey, and United Arab Emirates.

Morgan Stanley Capital International (MSCI) Emerging Markets (Net Dividends) IndexSM is a free float-adjusted market capitalization index that is designed to measure equity market performance of emerging markets. The MSCI Emerging Markets Index consists of the following 24 emerging market country indices: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Kuwait, Malaysia, Mexico, Peru, Philippines, Poland, Qatar, Saudi Arabia, South Africa, Taiwan, Thailand, Turkey and United Arab Emirates.

Morgan Stanley Capital International (MSCI) World (Net) Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed markets. The index consists of 23 developed market country indexes.

Morgan Stanley Capital International (MSCI) ACWI Energy (Net) Index includes large and mid-cap securities across 23 Developed Markets (DM) and 24 Emerging Markets (EM) countries. All securities in the index are classified in the Energy as per the Global Industry Classification Standard (GICS[®]).

Morgan Stanley Capital International (MSCI) ACWI Growth (Net) Index captures large and mid-cap securities exhibiting overall growth style characteristics across 23 developed markets countries and 24 emerging markets countries. The growth investment style characteristics for index construction are defined using five variables: long-term forward earnings per share ("EPS") growth rate, short-term forward EPS growth rate, current internal growth rate, long-term historical EPS growth trend, and long-term historical sales per share growth trend.

Morgan Stanley Capital International (MSCI) ACWI Utilities (Net) Index captures large and mid-cap representation across 23 Developed Markets (DM) and 24 Emerging Markets (EM) countries*. All securities in the index are classified in the Utilities sector as per the Global Industry Classification Standard (GICS[®]).

MSCI World 100% Hedged to USD Index represents a close estimation of the performance that can be achieved by hedging the currency exposures of its parent index, the MSCI World Index, to the USD, the "home" currency for the hedged index. The index is 100% hedged to the USD by selling each foreign currency forward at the one-month Forward weight. The parent index is composed of large and mid cap stocks across 23 Developed Markets (DM) countries* and its local performance is calculated in 13 different currencies, including the Euro.

Russell 1000® Growth Index measures the performance of those Russell 1000® Index companies with higher price-to-book ratios and higher forecasted growth values. It is market-capitalization weighted.

Russell 1000® Index measures the performance of approximately 1,000 of the largest companies in the Russell 3000® Index, and represents approximately 92% of the total market capitalization of the Russell 3000® Index. It is market-capitalization weighted.

Russell 1000® Value Index measures the performance of those Russell 1000® Index companies with lower price-to-book ratios and lower forecasted growth values. It is market-capitalization weighted.

Russell 2000® Growth Index measures the performance of those Russell 2000® Index companies with higher price-to-book ratios and higher forecasted growth values. It is market-capitalization weighted.

Russell 2000® Index measures the performance of approximately 2000 of the smallest companies in the Russell 3000® Index, which represents approximately 10% of the total market capitalization of the Russell 3000® Index. It is market-capitalization weighted.

Russell 2000® Value Index measures the performance of those Russell 2000® Index companies with lower price-to-book ratios and lower forecasted growth values. It is market-capitalization weighted.

Russell 3000® Growth Index measures the performance of those Russell 3000® Index companies with higher price-to-book ratios and higher forecasted growth values. It is market-capitalization weighted.

Russell 3000® Health Care Index is an unmanaged index representative of companies involved in medical services or health care in the Russell 3000® Index.

Russell 3000® Index measures the performance of the 3,000 largest U.S. companies based on total market capitalization, which represents approximately 98% of the investable U.S. equity market. It is market-capitalization weighted.

Russell Midcap® Growth Index measures the performance of those Russell Midcap® Index companies with higher price-to-book ratios and higher forecasted growth values. It is market-capitalization weighted.

Russell Midcap® Index measures the performance of approximately 800 of the smallest companies in the Russell 1000, which represents about 31% of the total market capitalization of the Russell 1000. It is market-capitalization weighted.

Russell Midcap® Value Index measures the performance of those Russell Midcap® Index companies with lower price-to-book ratios and lower forecasted growth values. It is market-capitalization weighted.

Standard & Poor's Australian Security Exchange 200 Index (a.k.a. S&P/ASX 200 Index) is recognized as the primary investable benchmark in Australia. The index represents the 200 largest and most liquid publicly listed companies in Australia and represents approximately 78% of the Australian equity market capitalization.

S&P North American Technology Sector Index is a modified capitalization-weighted index composed of U.S. traded securities classified under the Global Industry Classification Standard (GICS®) technology (sector) and Internet retail (sub-industry).

S&P Real Assets Equity (Net) Index is a static weighted return of investable and liquid equity indexed components that measures the performance of real return strategies that invest in listed global property, infrastructure, natural resources, and timber and forestry companies.

Standard & Poor's 500® Composite Stock Price Index ("S&P 500® Index") is a weighted index of common stocks of 500 leading companies in leading industries of the U.S. economy, capturing 75% coverage of U.S. equities. The index is capitalization weighted, thereby giving greater weight to companies with the largest market capitalizations.

Standard & Poor's MidCap 400® Index ("S&P MidCap 400® Index" or "S&P 400 Index") is a weighted index of 400 domestic stocks chosen for market size, liquidity, and industry group representation. The index captures approximately 7% of the U.S. equities market. The index returns reflect the reinvestment of dividends.

TOPIX Index is a free-float adjusted capitalization-weighted index that is calculated based on all the domestic common stocks listed on the Tokyo Stock Exchange First Section.

"Blended" performance numbers assume a static mix of the indexes. The Adviser believes that these indexes reflect more closely the market sectors in which the Portfolio invests.

4. Management of the Trust

The Trust

The Trust is organized as a Delaware statutory trust and is registered with the Securities and Exchange Commission (“SEC”) as an open-end management investment company. The Trust’s Board of Trustees is responsible for the overall management of the Trust and the Portfolios. The Trust issues shares of beneficial interest that are currently divided among one hundred ten (110) Portfolios, forty-seven (47) of which are authorized to issue Class IA, Class IB and Class K shares, forty-one (41) of which are authorized to issue Class IB and Class K shares, seventeen (17) of which are authorized to issue Class IB shares, four (4) of which are authorized to issue Class K shares, and one (1) of which is authorized to issue Class IA and Class IB shares. This Prospectus describes the Class IA, Class IB and Class K shares of thirty-seven (37) Portfolios, the Class IB and Class K shares of twenty-four (24) Portfolios, the Class IB shares of ten (10) Portfolios, and the Class K shares of four (4) Portfolios. Each Portfolio has its own investment objective, investment strategies and risks, which have been previously described in this Prospectus.

On March 19, 2024, the Trust’s Board of Trustees approved the combination of the Class IA shares of each of the following Portfolios with the Portfolio’s Class IB shares (the “Combination”): EQ/AB Small Cap Growth Portfolio, EQ/Capital Group Research Portfolio, EQ/ClearBridge Large Cap Growth ESG Portfolio, EQ/ClearBridge Select Equity Managed Volatility Portfolio, EQ/Core Bond Index Portfolio, EQ/Franklin Small Cap Value Managed Volatility Portfolio, EQ/Global Equity Managed Volatility Portfolio, EQ/International Core Managed Volatility Portfolio, EQ/International Value Managed Volatility Portfolio, EQ/Invesco Comstock Portfolio, EQ/Invesco Global Portfolio, EQ/Janus Enterprise Portfolio, EQ/JPMorgan Growth Stock Portfolio, EQ/JPMorgan Value Opportunities Portfolio, EQ/Large Cap Core Managed Volatility Portfolio, EQ/Large Cap Growth Index Portfolio, EQ/Large Cap Growth Managed Volatility Portfolio, EQ/Large Cap Value Index Portfolio, EQ/Large Cap Value Managed Volatility Portfolio, EQ/Loomis Sayles Growth Portfolio, EQ/MFS International Growth Portfolio, EQ/Mid Cap Index Portfolio, EQ/Mid Cap Value Managed Volatility Portfolio, EQ/PIMCO Ultra Short Bond Portfolio, EQ/Small Company Index Portfolio, EQ/Value Equity Portfolio, Multimanager Core Bond Portfolio, and Multimanager Technology Portfolio. The Combination is expected to occur effective after the close of business on June 21, 2024 (the “Effective Date”). As of the Effective Date, Class IA shares of these Portfolios will no longer be offered and all references to Class IA shares of these Portfolios are deleted from this Prospectus.

The Trust’s Board of Trustees oversees generally the operations of the Portfolios. The Trust enters into contractual arrangements with various parties, including among others, the Adviser, Administrator, Sub-Advisers, custodian, and accountants, who provide services to the Portfolios. Shareholders are not parties to any such contractual arrangements and those contractual arrangements are not intended to create in any shareholder any right to enforce them directly against the service providers or to seek any remedy under them directly against the service providers.

This Prospectus provides information concerning the Portfolios that you should consider in determining whether to purchase Portfolio shares. Neither this Prospectus nor the Statement of Additional Information is intended, or should be read, to be or create an agreement or contract between the Trust or a Portfolio and any shareholder, or to create any right in any shareholder or other person other than any rights under federal or state law that may not be waived.

The Adviser

Equitable Investment Management Group, LLC (“EIM” or “Adviser”), 1345 Avenue of the Americas, New York, New York 10105, is the Adviser to each Portfolio. EIM is registered with the SEC as an investment adviser under the Investment Advisers Act of 1940, as amended. EIM also is registered with the Commodity Futures Trading Commission (“CFTC”) as a commodity pool operator (“CPO”) under the Commodity Exchange Act, as amended, and serves as a CPO with respect to the EQ/Franklin Moderate Allocation Portfolio, EQ/Franklin Small Cap Value Managed Volatility Portfolio, EQ/Global Equity Managed Volatility Portfolio, EQ/Goldman Sachs Growth Allocation Portfolio, EQ/Goldman Sachs Moderate Growth Allocation Portfolio, EQ/International Core Managed Volatility Portfolio, EQ/International Value Managed Volatility Portfolio, EQ/Invesco Moderate Allocation Portfolio, EQ/Invesco Moderate Growth Allocation Portfolio, EQ/JPMorgan Growth Allocation Portfolio, EQ/Large Cap Core Managed Volatility Portfolio, EQ/Large Cap Growth Managed Volatility Portfolio, EQ/Large Cap Value Managed Volatility Portfolio, EQ/Mid Cap Value Managed Volatility Portfolio, EQ/500 Managed Volatility Portfolio, ATM Large Cap Managed Volatility Portfolio, EQ/400 Managed Volatility Portfolio, ATM Mid Cap Managed Volatility Portfolio, EQ/2000 Managed Volatility Portfolio, ATM Small Cap Managed Volatility Portfolio, EQ/International Managed Volatility Portfolio, and ATM International Managed Volatility Portfolio. EIM currently claims an exclusion (under CFTC Rule 4.5) from registration as a CPO with respect to each of the other Portfolios offered by this Prospectus. Being subject to dual regulation by the SEC and the CFTC may increase compliance costs and may affect Portfolio returns. EIM is a wholly-owned subsidiary of Equitable Financial Life Insurance Company (“Equitable Financial”). Equitable Financial is a wholly-owned subsidiary of Equitable Holdings, Inc. (“Equitable Holdings”), which is a publicly-owned company. EIM serves as the investment adviser to mutual funds and other pooled investment

vehicles. As of December 31, 2023, EIM and its advisory affiliate Equitable Investment Management, LLC had approximately \$116.5 billion in total assets under management. The Trust is part of a fund complex that includes the 1290 Funds, for which Equitable Investment Management, LLC, serves as investment adviser.

The Adviser provides or oversees the provision of all investment advisory, portfolio management and administrative services to the Portfolios. The Adviser has supervisory responsibility for the management and investment of each Portfolio's assets and develops the investment objectives and investment policies for the Portfolios. The Adviser also has full discretion to make all determinations with respect to the investment of a Portfolio's assets. As further discussed below, the Adviser's management responsibilities include the selection and monitoring of Sub-Advisers. In addition, the Adviser is responsible for the management of certain Portfolios' investments in ETFs.

With respect to the ATM and Hybrid Portfolios, in addition to its managerial responsibilities, the Adviser is responsible for determining the allocation of assets between actively and passively managed portions of the Portfolios, developing and overseeing the proprietary research model used to manage the portions of the Portfolios, and ensuring that asset allocations are consistent with the guidelines that have been approved by the Trust's Board of Trustees. With respect to the ATM Portfolios and certain of the Hybrid Portfolios, the Adviser also is responsible for developing and overseeing the proprietary research model used to manage the equity exposure of the Portfolios. With respect to certain of the Hybrid Portfolios, the Adviser also is responsible for advising the ETF Allocated Portions of the Portfolios (including selecting Underlying ETFs in which the Portfolios invest).

The Adviser is responsible for overseeing Sub-Advisers and recommending their hiring, termination and replacement to the Board of Trustees.

The Adviser selects Sub-Advisers to manage a Portfolio's assets by utilizing a due diligence process covering a number of key factors which include, but are not limited to, the Sub-Adviser's reputation, organizational stability, investment personnel, long-term performance, investment philosophy and style and correlation with other Sub-Advisers (if any) retained for other allocated portions of the Portfolio. The Adviser also considers the Sub-Adviser's portfolio management policies, trading practices, procedures for the valuation of portfolio securities, business continuity planning, conflicts of interest, procedures for safeguarding client information, cybersecurity, regulatory and legal issues, and staffing and resources.

The Adviser plays an active role in monitoring each Portfolio and Sub-Adviser and uses portfolio analytics systems to strengthen its evaluation of performance, style, risk levels, diversification and other criteria. The Adviser also monitors each Sub-Adviser's portfolio management team to determine whether its investment activities remain consistent with a Portfolio's investment style and objectives. Beyond performance analysis, the Adviser monitors significant changes that may impact a Sub-Adviser's overall business and changes in investment personnel and senior management. The Adviser conducts ongoing investment reviews with each Sub-Adviser and performs comprehensive due diligence reviews with each Sub-Adviser no less frequently than annually. While the Adviser seeks to obtain information to monitor Sub-Advisers, it is dependent on the availability of timely, complete and accurate data from the Sub-Advisers and other service providers, the timeliness, completeness and accuracy of which is not under the Adviser's control.

The Adviser seeks to obtain information concerning Portfolio and Sub-Adviser performance and Portfolio operations that is used to supervise and monitor the Sub-Advisers and Portfolio operations. The Adviser has a team responsible for conducting ongoing investment reviews with each Sub-Adviser and for developing the criteria by which performance is measured.

The Adviser selects Sub-Advisers from a pool of candidates, including its affiliates, to manage the Portfolios (or portions thereof). The Adviser may hire, terminate and replace Sub-Advisers and amend sub-advisory agreements subject to the approval of the Trust's Board of Trustees. The Adviser also may allocate a Portfolio's assets to additional Sub-Advisers subject to the approval of the Trust's Board of Trustees and has discretion to allocate a Portfolio's assets among its current Sub-Advisers. The Adviser recommends Sub-Advisers for a Portfolio to the Trust's Board of Trustees based upon its continuing quantitative and qualitative evaluation of each Sub-Adviser's skills in managing assets pursuant to specific investment styles and strategies. Short-term investment performance, by itself, is not a significant factor in selecting or terminating a Sub-Adviser, and the Adviser does not expect to recommend frequent changes of Sub-Advisers.

If the Adviser hires, terminates or replaces a Sub-Adviser to a Portfolio (or a portion thereof) or adjusts the asset allocation among Sub-Advisers to a Portfolio, the affected Portfolio may experience a period of transition during which the securities held in the Portfolio may be repositioned in connection with the change in Sub-Adviser. A Portfolio may not pursue its principal investment strategies during such a transition period and may incur increased brokerage commissions and other transaction costs in connection with the change. Generally, transitions may be implemented before or after the effective date of a new Sub-Adviser's appointment as a sub-adviser to a Portfolio, and may be completed in several days to several weeks, depending on the particular circumstances of the transition. In addition, the past performance of a Portfolio is not an indication of future performance. This may be particularly true for any Portfolio that has undergone Sub-Adviser changes and/or changes to the investment objective or policies of the Portfolio.

EIM investment personnel are primarily responsible for (i) selecting, monitoring and overseeing each Portfolio's Sub-Adviser(s); (ii) determining the allocation of assets between the actively and passively managed portions of and developing and overseeing the proprietary modeling tools used to manage the portions of the ATM International Managed Volatility Portfolio, ATM Large Cap Managed Volatility Portfolio, ATM Mid Cap Managed Volatility Portfolio, ATM Small Cap Managed Volatility Portfolio, EQ/2000 Managed Volatility Portfolio, EQ/400 Managed Volatility Portfolio, EQ/500 Managed Volatility Portfolio, EQ/International Managed Volatility Portfolio, EQ/ClearBridge Select Equity Managed Volatility Portfolio, EQ/Emerging Markets Equity PLUS Portfolio, EQ/Franklin Small Cap Value Managed Volatility Portfolio, EQ/Global Equity Managed Volatility Portfolio, EQ/International Core Managed Volatility Portfolio, EQ/International Value Managed Volatility Portfolio, EQ/Large Cap Core Managed Volatility Portfolio, EQ/Large Cap Growth Managed Volatility Portfolio, EQ/Large Cap Value Managed Volatility Portfolio, EQ/Mid Cap Value Managed Volatility Portfolio, EQ/Morgan Stanley Small Cap Growth Portfolio, EQ/Quality Bond PLUS Portfolio, Multimanager Aggressive Equity Portfolio, Multimanager Core Bond Portfolio, and Multimanager Technology Portfolio and ensuring that asset allocations are consistent with the guidelines that have been approved by the Trust's Board of Trustees; (iii) developing and overseeing the proprietary modeling tools used to manage the equity exposure of the EQ/ClearBridge Select Equity Managed Volatility Portfolio, EQ/Franklin Small Cap Value Managed Volatility Portfolio, EQ/Global Equity Managed Volatility Portfolio, EQ/International Core Managed Volatility Portfolio, EQ/International Value Managed Volatility Portfolio, EQ/Large Cap Core Managed Volatility Portfolio, EQ/Large Cap Growth Managed Volatility Portfolio, EQ/Large Cap Value Managed Volatility Portfolio, EQ/Mid Cap Value Managed Volatility Portfolio, ATM International Managed Volatility Portfolio, ATM Large Cap Managed Volatility Portfolio, ATM Mid Cap Managed Volatility Portfolio, ATM Small Cap Managed Volatility Portfolio, EQ/2000 Managed Volatility Portfolio, EQ/400 Managed Volatility Portfolio, EQ/500 Managed Volatility Portfolio, and EQ/International Managed Volatility Portfolio, and (iv) managing the ETF Allocated Portion of and the modeling tools used to manage the ETF Allocated Portion of each of the EQ/International Value Managed Volatility Portfolio, EQ/Large Cap Core Managed Volatility Portfolio, EQ/Large Cap Growth Managed Volatility Portfolio, EQ/Large Cap Value Managed Volatility Portfolio, EQ/Mid Cap Value Managed Volatility Portfolio, and Multimanager Technology Portfolio.

Kenneth T. Kozlowski, CFP[®], CLU, ChFC has served as Executive Vice President and Chief Investment Officer of the Adviser since June 2012, and as Signatory Officer of Equitable Financial since November 2021. He has been an employee of Equitable Financial since 1999.

Alwi Chan, CFA[®] has served as Senior Vice President and Deputy Chief Investment Officer of the Adviser since June 2012. He has been an employee of Equitable Financial since 1999.

Xavier Poutas, CFA[®] has served as an Assistant Portfolio Manager of the Adviser since May 2011 and as a Vice President of the Adviser since June 2016. He has been an employee of Equitable Financial since August 2002.

Miao Hu, CFA[®] has served as an Assistant Portfolio Manager of the Adviser since May 2016 and as a Vice President of the Adviser since June 2016. She has served as a Director of Portfolio Analytics of the Adviser since December 2014. She has been an employee of Equitable Financial since November 2013.

Kevin McCarthy has served as an Assistant Portfolio Manager of the Adviser since December 2018 and as a Vice President of the Adviser since July 2022. He has been an employee of Equitable Financial since August 2015.

Information about the portfolio managers' compensation, other accounts they manage and their ownership of shares of the Portfolios is available in the Trust's SAI.

The Adviser has been granted relief from the SEC that permits the Adviser, subject to the approval of the Trust's Board of Trustees, to hire, terminate and replace Sub-Advisers and to amend the sub-advisory agreements between the Adviser and the Sub-Advisers without obtaining shareholder approval. If a new Sub-Adviser is retained for a Portfolio, shareholders will receive notice of such action. However, the Adviser may not enter into a sub-advisory agreement on behalf of a Portfolio with an "affiliated person" of the Adviser (as that term is defined in the 1940 Act) ("Affiliated Sub-Adviser"), such as AllianceBernstein L.P., unless the sub-advisory agreement with the Affiliated Sub-Adviser, including compensation, is also approved by the affected Portfolio's shareholders. The relief does not extend to any increase in the advisory fee paid by a Portfolio to the Adviser; any such increase would be subject to the approval of the affected Portfolio's shareholders.

The Sub-Advisers

Each Portfolio's investments are selected by one or more Sub-Advisers, which act independently of one another. The following describes each sub-advised Portfolio's Sub-Advisers and portfolio managers and each portfolio manager's business experience. Information about the portfolio managers' compensation, other accounts they manage and their ownership of shares of the Portfolio(s) is available in the SAI. Each Sub-Adviser is subject to the oversight of the Adviser.

1832 Asset Management U.S. Inc. ("1832 Asset Management"), 40 Temperance Street, Toronto, Ontario, Canada M5H 0B4, serves as Sub-Adviser to an Active Allocated Portion of the Multimanager Aggressive Equity Portfolio. 1832 Asset Management is an indirect wholly owned subsidiary of The Bank of Nova Scotia ("Scotiabank"). Scotiabank is a financial services company which provides a broad range of financial products and services to individuals, institutions and corporations through a number of operating subsidiaries. Scotiabank is publicly traded on the Toronto and New York Stock Exchanges under the symbol BNS. As of December 31, 2023, 1832 Asset Management had approximately \$828 million in assets under management.

Noah Blackstein is primarily responsible for the day-to-day management of an Active Allocated Portion of the Multimanager Aggressive Equity Portfolio. Mr. Blackstein is a Vice President and Senior Portfolio Manager of 1832 Asset Management and joined 1832 Asset Management in 1997 as a portfolio manager. His investment experience dates from 1993.

AllianceBernstein L.P. ("AllianceBernstein"), 501 Commerce Street, Nashville, TN 37203, serves as Sub-Adviser to the EQ/AB Dynamic Aggressive Growth Portfolio, EQ/AB Dynamic Growth Portfolio, EQ/AB Dynamic Moderate Growth Portfolio, EQ/AB Short Duration Government Bond Portfolio, EQ/AB Sustainable U.S. Thematic Portfolio, EQ/Common Stock Index Portfolio, EQ/Equity 500 Index Portfolio, EQ/Intermediate Corporate Bond Portfolio, EQ/International Equity Index Portfolio, EQ/Large Cap Growth Index Portfolio, EQ/Large Cap Value Index Portfolio, EQ/Long-Term Bond Portfolio, EQ/Mid Cap Index Portfolio, and EQ/Small Company Index Portfolio. AllianceBernstein also serves as Sub-Adviser to the Active and Index Allocated Portions of the EQ/AB Small Cap Growth Portfolio, EQ/Large Cap Value Managed Volatility Portfolio and EQ/Quality Bond PLUS Portfolio. AllianceBernstein also serves as Sub-Adviser to the Index Allocated Portion of each of the EQ/Emerging Markets Equity PLUS Portfolio, Multimanager Aggressive Equity Portfolio, and Multimanager Technology Portfolio. AllianceBernstein manages investments for investment companies, endowment funds, insurance companies, foreign entities, qualified and non-tax qualified corporate funds, public and private pension and profit-sharing plans, foundations and tax-exempt organizations. As of December 31, 2023, AllianceBernstein had approximately \$725 billion in assets under management.

AllianceBernstein's Dynamic Allocation Portfolio Team ("ADAPT") is responsible for the volatility management tool-set used to manage the EQ/AB Dynamic Aggressive Growth Portfolio, EQ/AB Dynamic Growth Portfolio, EQ/AB Dynamic Moderate Growth Portfolio, and for portfolio construction. ADAPT relies heavily on the fundamental analysis and research of AllianceBernstein's large internal research staff. In implementing the Portfolio's index-based strategy, ADAPT is supported by AllianceBernstein's Passive Equity Investment Team. The Team is led by **Daniel J. Loewy, CFA®**, **Caglasu Altunkopru** and **Alexander Barenboym**.

Daniel J. Loewy, CFA® is Chief Investment Officer — Multi-Asset Solutions investment unit and a partner at AllianceBernstein. He is also Chief Investment Officer — Dynamic Asset Allocation and oversees all aspects of AllianceBernstein's Dynamic Asset Allocation portfolios, including research, portfolio construction and new product design. Mr. Loewy joined AllianceBernstein in 1996.

Caglasu Altunkopru is Head of Macro Strategy in the Multi-Asset Solutions Group at AllianceBernstein. She was previously a sell-side analyst at AllianceBernstein, covering equity portfolio strategy for six years. Ms. Altunkopru joined the firm in 2005, covering the European Household and Personal Care sector.

Alexander Barenboym is a Portfolio Manager and researcher in the Dynamic Asset Allocation (DAA) Group, where he focuses on portfolio construction, management of DAA-based asset-allocation products, and quantitative research and modeling of fixed-income instruments and derivatives. Mr. Barenboym joined AllianceBernstein in 2008.

AllianceBernstein's US Small/SMID Cap Growth Team, which is responsible for management of all of AllianceBernstein's US Small/SMID Cap Growth accounts, manages and makes investment decisions for the Active Allocated Portion of the EQ/AB Small Cap Growth Portfolio. The US Small/SMID Cap Growth Team relies heavily on its fundamental analysis and research. In addition, the team draws upon the research of AllianceBernstein's industry analysts as well as other portfolio management teams. The members of the US Small/SMID Cap Growth Team with the most significant responsibility for the investment decisions for the Portfolio are: **Samantha Lau** and **Wen-Tse Tseng**.

Samantha Lau is Senior Vice President, Portfolio Manager/Research Analyst and is responsible for research and portfolio management for the Small/SMID Cap Growth technology sector. Ms. Lau joined AllianceBernstein in 1999 and has had portfolio management responsibilities since that time.

Wen-Tse Tseng is Senior Vice President and Portfolio Manager/Research Analyst and is responsible for research and portfolio management for the Small/SMID Cap Growth healthcare sector. Mr. Tseng joined AllianceBernstein in 2006.

AllianceBernstein's Passive Equity Investment Team, which is responsible for the management of all of AllianceBernstein's Passive Equity accounts, manages and makes investment decisions for the EQ/International Equity Index Portfolio, EQ/Large Cap Value Index Portfolio, EQ/Mid Cap Index Portfolio, EQ/Small Company Index Portfolio, EQ/Large Cap Growth Index Portfolio, EQ/Common Stock Index Portfolio, EQ/Equity 500 Index Portfolio, EQ/500 Managed Volatility Portfolio, EQ/400 Managed Volatility Portfolio, EQ/2000 Managed Volatility Portfolio, EQ/International Managed Volatility Portfolio, ATM Large Cap Managed Volatility Portfolio, ATM Mid Cap Managed Volatility Portfolio, ATM Small Cap Managed Volatility Portfolio and ATM International Managed Volatility Portfolio. The Passive Equity Investment Team relies heavily on quantitative tools. The team also is responsible for the investment decisions for the Index Allocated Portion of each of the EQ/AB Small Cap Growth Portfolio, EQ/Emerging Markets Equity PLUS Portfolio, EQ/Large Cap Value Managed Volatility Portfolio, Multimanager Aggressive Equity Portfolio and Multimanager Technology Portfolio.

Joshua Lisser is Senior Vice President/Chief Investment Officer, Index Strategies and is a member of the Blend Solutions Team. He joined AllianceBernstein in 1992 as a portfolio manager in the index strategies group and developed the international and global risk controlled equity services.

Geoff Tomlinson, CFA® is a Portfolio Manager for Index Strategies at AllianceBernstein. He joined AllianceBernstein in 2006 as an associate in the Institutional Investment Management Sales Group. Prior to transitioning to his current role, from 2011 to 2019, Mr. Tomlinson was a portfolio analyst for Index Strategies, with a focus on custom index and enhanced index strategies.

The North American Value Investment Policy Group, comprised of senior North American Value Investment Team members, manages and makes investment decisions for the Active Allocated Portion of EQ/Large Cap Value Managed Volatility Portfolio. The North American Value Investment Policy Group relies heavily on the fundamental analysis and research of AllianceBernstein's large internal research staff. No one person is principally responsible for making recommendations for the Active Allocated Portion of the Portfolio. The member of the North American Value Investment Policy Group with the most significant responsibility for the investment decisions for the Active Allocated Portion of the Portfolio is **Cem Inal**.

Cem Inal has been Senior Vice President/Portfolio Manager at AllianceBernstein since 2014. He also serves as Senior Research Analyst and is the sector leader of the technology team. He has been with AllianceBernstein since 2003 and has 25 years of industry experience.

The U.S. Core Fixed Income Team, comprised of senior Core Fixed Asset Team members, manages and makes investment decisions for the EQ/AB Short Duration Government Bond Portfolio and EQ/Long-Term Bond Portfolio and the Active Allocated Portion and Passive Allocated Portion of EQ/Quality Bond PLUS Portfolio. The Core Fixed Asset Team relies heavily on the fundamental analysis and research of AllianceBernstein's large internal research staff. Members of the team work jointly to determine the majority of the investment strategy, including security selection for the firm's U.S. Core Fixed Income accounts.

The management of and investment decisions for the EQ/AB Short Duration Government Bond Portfolio and the Passive Allocated Portion and a portion of the Active Allocated Portion of EQ/Quality Bond PLUS Portfolio are the joint and primary responsibility of **Michael S. Canter and Matthew Sheridan**.

Michael S. Canter is Senior Vice President - Director - US Multi-Sector & Securitized Assets of AllianceBernstein. Dr. Canter joined AllianceBernstein in 2007 as a Senior Vice President and is currently the Director of US Multi-Sector and Securitized Assets. He is also the head of the Securitized Assets Research Group, which is responsible for AllianceBernstein's investing efforts in agency mortgage-backed securities, non-agency residential mortgage-backed securities (RMBS), commercial mortgage-backed securities and other asset-backed securities.

Matthew Sheridan, CFA® is a Senior Vice President and Director of Fixed Income of AllianceBernstein, leading the firm's US Multi-Sector Fixed Income Strategies. He is also a member of the Global Fixed Income and Income Strategies portfolio-management teams. Additionally, Mr. Sheridan is a member of the Rates and Currency Research Review team and the Emerging Market Debt Research Review team. He joined AllianceBernstein in 1998. He is a CFA charterholder.

The management of and investment decisions for the EQ/Intermediate Corporate Bond Portfolio and EQ/Long-Term Bond Portfolio are the joint and primary responsibility of **Tiffanie Wong and Sonam Dorji**.

Tiffanie Wong, CFA® is a Senior Vice President and Director of US Investment Grade Credit, responsible for the management and strategy implementation of the firm's US Investment Grade Credit portfolios, including total-return and income-oriented credit strategies for institutional and retail clients. Prior to joining AllianceBernstein's fixed income portfolio management team, Ms. Wong served as an associate portfolio manager on the credit team. Ms. Wong joined AllianceBernstein in 2012.

Sonam Dorji is a Senior Vice President and Portfolio Manager of AllianceBernstein, primarily focusing on Global Multi-Sector Income strategies. She joined AllianceBernstein in 2012.

AllianceBernstein's Sustainable Thematic Equities Investment Team manages and makes investment decisions for the EQ/AB Sustainable U.S. Thematic Portfolio.

Daniel C. Roarty is Senior Vice President and Chief Investment Officer of the Sustainable Thematic Equities Team of AllianceBernstein, with which he has been associated in a substantially similar capacity to his current position since prior to 2016.

Benjamin Ruegsegger is Senior Vice President and Portfolio Manager of AllianceBernstein, with which he has been associated in a substantially similar capacity to his current position since 2017. He has also been a Senior Research Analyst of AllianceBernstein since prior to 2016.

AXA Investment Managers US Inc. ("AXA IM"), 400 Atlantic Street, Suite 1000, Stamford, Connecticut 06901 serves as Sub-Adviser to the portion of the EQ/Core Plus Bond Portfolio allocated to AXA IM. AXA IM is an indirect wholly-owned subsidiary of AXA Investment Managers, S.A., which is a wholly-owned subsidiary of the AXA Group. As of December 31, 2023, AXA IM had approximately \$92 billion in assets under management.

Michael Graham, CFA[®] is the Head of U.S. High Yield and a Senior U.S. High Yield Portfolio Manager at AXA IM. Since joining AXA IM in 2007, Mr. Graham has held various leadership roles within the U.S. High Yield team.

Robert Houle, CFA[®] is a Senior U.S. High Yield Portfolio Manager at AXA IM. Prior to joining AXA IM in 2005 as a U.S. high yield analyst, Mr. Houle was a trader at Lehman Brothers.

Brandywine Global Investment Management, LLC ("Brandywine Global"), 1735 Market Street, Philadelphia, Pennsylvania 19103, serves as Sub-Adviser to the portion of the EQ/Core Plus Bond Portfolio allocated to Brandywine Global. Brandywine Global acts as adviser or sub-adviser to individuals, public funds, corporations, pension and profit sharing plans, Taft-Hartley Plans, endowments and foundations, as well as to investment company portfolios. As of December 31, 2023, Brandywine Global's total assets under management were approximately \$62.33 billion.

Anujeet Sareen, CFA[®] is a portfolio manager for Brandywine Global's global fixed income and related strategies. Prior to joining Brandywine Global in 2016, Mr. Sareen was employed at Wellington Management since 1994 where he served as a managing director of global fixed income and a global macro strategist, as well as Chair of the Currency Strategy Group.

Brian L. Kloss, JD, CPA is a portfolio manager on the Global Fixed Income team. He joined Brandywine Global in December 2009, bringing with him over 10 years of high yield and distressed debt experience. Prior to joining Brandywine Global, Mr. Kloss was co-portfolio manager at Dreman Value Management, LLC.

Tracy Chen, CFA[®], CAIA is a portfolio manager and head of Structured Credit for Brandywine Global. Ms. Chen is responsible for conducting credit analysis on mortgage-backed securities (MBS) with special emphasis on collateralized mortgage obligations (CMOs), collateralized loan obligations (CLOs) and other structured products. She also monitors and analyzes the investment merits of global corporate debt issues. She joined the firm in August 2008.

Dreyfus, a division of Mellon Investments Corporation ("MIC"), One Boston Place, 14th Floor, Boston, Massachusetts 02108, is the Sub-Adviser to the EQ/Money Market Portfolio. Dreyfus is an indirect wholly-owned subsidiary of The Bank of New York Mellon Corporation. As of December 31, 2023, MIC had approximately \$842 billion of assets under management, which includes approximately \$372 billion in assets managed by investment personnel of MIC acting in their capacity as officers of affiliated entities (including BNY Mellon Investment Adviser, Inc.).

Loomis, Sayles & Company, L.P. ("Loomis Sayles"), One Financial Center, Boston, MA 02111, serves as the Sub-Adviser to the EQ/Loomis Sayles Growth Portfolio and a portion of the Active Allocated Portion of the EQ/Large Cap Growth Managed Volatility Portfolio. Loomis Sayles also serves as the Sub-Adviser to the portion of the EQ/Core Plus Bond Portfolio allocated to Loomis Sayles. Loomis Sayles was founded in 1926, and is one of the oldest investment advisory firms in the United States. Loomis Sayles is a Delaware limited partnership. Loomis Sayles' sole general partner, Loomis, Sayles & Company, Inc., is directly owned by Natixis Investment Managers, LLC ("Natixis LLC"). Natixis LLC is an indirect subsidiary of Natixis Investment Managers, an international asset management group based in Paris, France, that is in turn owned by Natixis, a French investment banking and financial services firm. Natixis is wholly-owned by Groupe BPCE, France's second largest banking group. Groupe BPCE is owned by banks comprising two autonomous

and complementary retail banking networks consisting of Caisse d'Épargne regional savings banks and the Banque Populaire regional cooperative banks. As of December 31, 2023, Loomis Sayles had \$335.2 billion in assets under management.

Aziz V. Hamzaogullari is responsible for the securities selection, research and trading for the EQ/Loomis Sayles Growth Portfolio and a portion of the Active Allocated Portion of the EQ/Large Cap Growth Managed Volatility Portfolio.

Aziz V. Hamzaogullari, CFA® is the Chief Investment Officer and Founder of the Growth Equity Strategies Team, and Portfolio Manager at Loomis Sayles. He has 30 years of investment industry experience.

Christopher T. Harms, Clifton V. Rowe, CFA®, Daniel Conklin, CFA®, Ian Anderson, and Barath W. Sankaran, CFA® are jointly and primarily responsible for the securities selection, research and trading for Loomis Sayles' portion of the EQ/Core Plus Bond Portfolio (or a portion thereof).

Christopher T. Harms is a Portfolio Manager and Co-Head of the Relative Return Team at Loomis Sayles. He co-manages the Loomis Sayles Limited Term Government & Agency and Intermediate Duration Bond funds, in addition to the Natixis Loomis Sayles Short Duration Income ETF. He also co-manages the Loomis Sayles Core, Intermediate Duration and Short Duration Fixed Income strategies. Mr. Harms joined Loomis Sayles in 2010 and has 43 years of investment industry experience. He earned a BSBA from Villanova University and an MBA from Drexel University.

Clifton V. Rowe, CFA® is a Portfolio Manager for the Relative Return Team and Mortgage and Structured Finance Team at Loomis Sayles. He co-manages the Loomis Sayles Limited Term Government & Agency and Intermediate Duration Bond funds, in addition to the Natixis Loomis Sayles Short Duration Income ETF. He also co-manages the Loomis Sayles Core, Short Duration Fixed Income, and Intermediate Duration strategies and the Loomis Sayles Securitized Asset Fund. Mr. Rowe joined Loomis Sayles in 1992 and has 31 years of investment industry experience. He earned a BBA from James Madison University and an MBA from the University of Chicago.

Daniel Conklin, CFA® is a Portfolio Manager for the Relative Return Team at Loomis Sayles. He co-manages the Loomis Sayles Intermediate Duration Bond and Limited Term Government & Agency funds, as well as the Natixis Loomis Sayles Short Duration Income ETF. He also co-manages the Loomis Sayles Core Fixed Income, Short Duration Fixed Income and Intermediate Duration Fixed Income strategies. Mr. Conklin joined Loomis Sayles in 2012 and has 13 years of investment industry experience. He earned a BS from the University of Massachusetts, Lowell and an MS in Finance from Northeastern University.

Ian Anderson is the Agency MBS Strategist for the Mortgage and Structured Finance Team at Loomis Sayles where he is responsible for developing agency MBS research and relative value recommendations across all fixed income products. He is the Lead Portfolio Manager for the Dedicated Agency MBS Strategies and a Co-Agency MBS Portfolio Manager for the Loomis Sayles Core Plus Bond Fund. He joined the firm in 2011.

Barath W. Sankaran, CFA® is a member of the Mortgage and Structured Finance Team at Loomis Sayles. He is a Co-Portfolio Manager for the Dedicated Agency MBS Strategies and a Co-Agency MBS Portfolio Manager for the Loomis Sayles Core Plus Bond Fund. He joined the firm in 2009.

T. Rowe Price Associates, Inc. ("T. Rowe Price"), 100 East Pratt Street, Baltimore, MD 21202, is the Sub-Adviser to the EQ/T. Rowe Price Health Sciences Portfolio and a portion of the Active Allocated Portion of the Multimanager Aggressive Equity Portfolio. T. Rowe Price was founded in 1937 and, as of December 31, 2023, T. Rowe Price and its affiliates had approximately \$1.45 trillion in assets under management.

Taymour R. Tamaddon, CFA®, a vice president of T. Rowe Price Group, Inc. and T. Rowe Price Associates, Inc., has primary responsibility for the security selection, research and trading for a portion of the Active Allocated Portion of Multimanager Aggressive Equity Portfolio. He is the lead portfolio manager and chairman of the Investment Advisory Committee for the US Large-Cap Growth Equity Strategy. Mr. Tamaddon joined T. Rowe Price in 2004 and has served as an equity research analyst and as a portfolio manager (beginning in 2013).

Ziad Bakri, MD, CFA®, Chairman of Investment Advisory Committee, has been chairman of the committee since 2016. Mr. Bakri joined the Firm in 2011 and his investment experience dates from 2005. Since joining the Firm, he has served as an investment analyst covering the healthcare sector.

Westfield Capital Management Company, L.P. ("Westfield"), One Financial Center, Boston, MA 02111, serves as Sub-Adviser to an Active Allocated Portion of the Multimanager Aggressive Equity Portfolio. Westfield is registered with the SEC as an investment

adviser under the Investment Advisers Act of 1940. Westfield is 100% employee owned. As of December 31, 2023, Westfield had approximately \$17.6 billion in assets under management.

Investment decisions for the Active Allocated Portion of the Multimanager Aggressive Equity Portfolio allocated to Westfield are made by consensus of the Investment Committee (the “Committee”), which is chaired by William A. Muggia. Although the Committee collectively acts as portfolio manager, Westfield lists the following Committee members, based either on seniority or role within the Committee, as having day-to-day management responsibilities of the Fund.

William A. Muggia is President, Chief Executive Officer and Chief Investment Officer. Mr. Muggia joined Westfield in 1994. In addition to his executive duties, Mr. Muggia chairs the Investment Committee, serves as Market Strategist, and contributes investment ideas primarily within the Health Care and Energy sectors.

Richard D. Lee, CFA[®], is a Managing Partner and Chief Investment Officer. He joined Westfield in 2004, and has been a member of Westfield’s Investment Committee since then. He covers Hardware, Semiconductors and IT Services.

Ethan J. Meyers, CFA[®], is a Managing Partner and Director of Research. Mr. Meyers joined Westfield in 1999. He covers Financial Technology and Business Services.

John M. Montgomery is a Managing Partner, Portfolio Strategist, and Chief Operating Officer. Mr. Montgomery joined Westfield in 2006.

Conflicts of Interest

The Adviser currently serves as the investment adviser for the Trust, which is an investment company that is registered under the 1940 Act, and as the investment adviser for two private investment trusts that are exempt from such registration. In addition to currently serving as the administrator for the Trust, the Administrator currently serves as the investment adviser and the administrator for the 1290 Funds, another investment company that is registered under the 1940 Act. The Adviser and its affiliates (including Equitable Financial, Equitable Distributors, LLC, Equitable Holdings, AllianceBernstein L.P., and the Administrator) and their respective managers, partners, directors, trustees, officers, and employees (collectively, for purposes of this Conflicts of Interest discussion, “Affiliates”) are insurance and related financial services companies engaged in life insurance, property and casualty insurance and reinsurance activities, as well as asset management, investment banking, securities trading, brokerage, real estate and other financial services activities, providing a broad range of services to a substantial and diverse client base. The broad range of activities, services, and interests of the Adviser and its Affiliates gives rise to actual, potential and/or perceived conflicts of interest, and could introduce certain investment or transactional restrictions, that could disadvantage the Portfolios and their shareholders.

Certain actual and potential conflicts of interest are discussed below and elsewhere in this Prospectus, and a further discussion of conflicts of interest appears in the SAI. Investors should carefully review these discussions. These discussions are not, and are not intended to be, a complete discussion of all of the actual and potential conflicts of interest that could arise. Additional or unanticipated conflicts of interest could arise from time to time in the ordinary course of the Adviser’s and its Affiliates’ various businesses.

The Adviser and the Trust have adopted practices, policies and procedures that are intended to identify, monitor, and mitigate conflicts of interest. These practices, policies and procedures include, among others, information barriers, codes of ethics, pre-clearance and reporting of securities transactions by certain persons, and the use of independent persons to review certain types of transactions. There is no assurance, however, that these practices, policies and procedures will be effective, and these practices, policies and procedures also could limit the Portfolios’ investment activities and affect their performance.

Certain Conflicts Related to Fees and Compensation

The Adviser and certain of its Affiliates provide services including investment advisory, administration, shareholder servicing, distribution and transfer agency services to the Portfolios and earn fees from these relationships with the Portfolios. The Adviser and its Affiliates face conflicts of interest when the Portfolios select affiliated service providers because the Adviser and its Affiliates receive greater compensation when they are used. Although these fees are generally based on asset levels, the fees are not directly contingent on Portfolio performance and the Adviser and its Affiliates would still receive significant compensation from the Portfolios even if shareholders lose money. In addition, the Adviser and certain of its Affiliates manage or advise funds or accounts, including the Portfolios, with different fee rates and/or fee structures. Differences in fee arrangements could create an incentive for the Adviser and/or its Affiliates to favor higher-fee funds or accounts.

Certain Conflicts Related to the Adviser and its Affiliates Acting in Multiple Commercial Capacities

The Adviser and/or one or more Affiliates act or may act in various commercial capacities, including as investment manager, investment adviser, administrator, investor, commodity pool operator, underwriter, distributor, transfer agent, insurance company, investment banker, research provider, market maker, trader, lender, agent or principal, and may have direct and indirect interests in securities, commodities, currencies, derivatives and other instruments in which the Portfolios may directly or indirectly invest. Thus, it is likely that the Portfolios will have business relationships with and will invest in, engage in transactions with, make voting decisions with respect to, or obtain services from entities with which the Adviser and/or an Affiliate has developed or is trying to develop business relationships or in which the Adviser and/or an Affiliate has significant investments or other interests. For example, the Adviser could have an incentive to hire as a Sub-Adviser or other service provider an entity with which the Adviser or one or more Affiliates have, or would like to have, significant or other business dealings or arrangements. In addition, when Affiliates act in various commercial capacities in relation to the Portfolios, the Affiliates could take commercial steps in their own interests, which could have an adverse effect on the Portfolios.

Certain Conflicts Related to the Use of Sub-Advisers

The Adviser is subject to certain conflicts of interest in connection with recommending the appointment and continued service of Sub-Advisers. Since the Adviser pays fees to the Sub-Advisers from the advisory fees that it earns from the Portfolios, any increase or decrease in the sub-advisory fees negotiated with proposed or current Sub-Advisers will result in a corresponding decrease or increase, respectively, in the amount of the advisory fees retained by the Adviser. If the Adviser is affiliated with a Sub-Adviser, the Adviser will benefit not only from the net advisory fee the Adviser retains, but also from the sub-advisory fee paid by the Adviser to the affiliated Sub-Adviser. The Adviser or its Affiliates also may have distribution relationships with certain Sub-Advisers or their affiliates under which the Sub-Advisers or their affiliates distribute or support the distribution of investment products issued or sold by the Adviser or its Affiliates (including those in which the Portfolios serve as investment options), which could financially benefit the Adviser and its Affiliates or provide an incentive to the Adviser in selecting one Sub-Adviser over another or a disincentive for the Adviser to recommend the termination of such Sub-Advisers. In addition, the Adviser's and/or its Affiliates' other existing or potential business relationships (e.g., distribution, sub-administration, or custody arrangements), including with Sub-Advisers and/or their affiliates, or other financial or personal relationships or investments or other interests, could influence the Adviser's selection and retention or termination of Sub-Advisers as well as sub-advisory or other fee negotiations.

The Adviser may allocate a Portfolio's assets among multiple Sub-Advisers. While the Adviser seeks to allocate a Portfolio's assets among the Portfolio's Sub-Advisers in a manner that it believes is consistent with achieving the Portfolio's investment objective, the Adviser is subject to conflicts of interest in allocating the Portfolio's assets among Sub-Advisers, including affiliated Sub-Advisers, if any, because the Adviser pays different fees to the Sub-Advisers and due to other factors that could impact the Adviser's and/or its Affiliates' revenues and/or profits.

The aggregation of assets of multiple Portfolios or other funds or accounts for purposes of calculating breakpoints in sub-advisory fees could create an incentive for the Adviser to select Sub-Advisers where the selection would serve to lower a sub-advisory fee and possibly increase the advisory fee retained by the Adviser or could provide a disincentive for the Adviser to recommend the termination of a Sub-Adviser from a Portfolio if the termination would cause the sub-advisory fee payable by the Adviser to increase on a Portfolio or other fund or account that aggregates its assets with the Portfolio. The aggregation of assets, or the potential to aggregate assets, also could influence the Adviser's and/or its Affiliates' sub-advisory or other fee negotiations.

The Adviser is a fiduciary for the shareholders of the Portfolios and must put their interests ahead of its own interests (or the interests of its Affiliates). When recommending the appointment or continued service of a Sub-Adviser, consistent with its fiduciary duties, the Adviser relies primarily on the qualitative and quantitative factors described in detail in this Prospectus.

Furthermore, the range of activities, services, and interests of a Sub-Adviser and its personnel could give rise to actual, potential and/or perceived conflicts of interest that could disadvantage a Portfolio that it sub-advises and the Portfolio's shareholders. For example, a Sub-Adviser's portfolio managers may manage multiple funds and accounts for multiple clients. In addition to one or more Portfolios, these funds and accounts may include, for example, other mutual funds, separate accounts, collective trusts, and offshore funds. Managing multiple funds and accounts could give rise to actual or potential conflicts of interest, including, for example, conflicts among investment strategies, conflicts in the allocation of limited investment opportunities, and conflicts in the aggregation and allocation of securities trades. In addition, a Sub-Adviser's portfolio managers may manage or advise funds or accounts with different fee rates and/or fee structures, including performance-based fee arrangements. Differences in fee arrangements could create an incentive for a portfolio manager to favor higher-fee funds or accounts. Each Sub-Adviser has adopted practices, policies and procedures that are intended to identify, monitor, and mitigate conflicts of interest. There is no assurance, however, that a Sub-Adviser's practices, policies and procedures will be effective, and a Sub-Adviser's practices, policies and procedures also could limit the investment activities of the Portfolio that it sub-advises and affect the Portfolio's performance. Please see the Portfolios' Statement of Additional Information for a further discussion of Sub-Adviser conflicts of interest.

Certain Conflicts Related to the Adviser's Insurance Company Affiliates

The Portfolios are available through Contracts offered by insurance company Affiliates of the Adviser. The performance of a Portfolio could impact the obligations and financial exposure of the Adviser's insurance company Affiliates under any death benefit, income benefit and other guarantees provided through Contracts that offer the Portfolio as an investment option, and the ability of an insurance company Affiliate to manage (e.g., through the use of various hedging techniques) the risks associated with these benefits and guarantees. The Adviser's investment decisions and the design of the Portfolios could be influenced by these factors. For example, the Portfolios or models and strategies may be managed or designed in a manner (e.g., using more conservative or less volatile investment styles, including volatility management strategies) that could reduce potential losses and/or mitigate financial risks to insurance company Affiliates that provide the benefits and guarantees and offer the Portfolios as investment options in their products, and also could facilitate such an insurance company's ability to provide benefits and guarantees under its Contracts, including by making more predictable the costs of the benefits and guarantees and by reducing the regulatory capital needed to provide them. The financial benefits to the Adviser's insurance company Affiliates could be material.

Although the Adviser's volatility management techniques, including the use of futures and options to manage equity exposure, are intended to reduce the overall risk of investing in a Portfolio, they may not work as intended and may result in losses by a Portfolio or periods of underperformance, particularly during periods when market values are increasing but market volatility is high. The result of any volatility management strategy will be subject to the Adviser's ability to correctly assess the degree of correlation between the performance of the relevant market index and the metrics used by the Adviser to measure market volatility. Since the characteristics of many securities change as markets change or time passes, the result of any volatility management strategy also will be subject to the Adviser's ability to continually recalculate, readjust, and execute volatility management techniques in an efficient manner. Market conditions change, sometimes rapidly and unpredictably, and the Adviser may be unable to execute a volatility management strategy in a timely manner or at all. In addition, the Adviser and its insurance company Affiliates manage or advise other funds and accounts that engage in and compete for transactions in the same types of securities and instruments (such as futures contracts) as a Portfolio. Such transactions could affect the prices and availability of the securities and instruments in which a Portfolio invests, directly or indirectly, and could have an adverse impact on a Portfolio's performance.

A significant percentage of a Portfolio's shares may be owned or controlled by the Adviser and/or its Affiliates, other Portfolios advised by the Adviser (including funds-of-funds), or other large shareholders, including primarily insurance company separate accounts and qualified plans. Accordingly, a Portfolio is subject to the potential for large-scale inflows and outflows as a result of purchases and redemptions of its shares by such shareholders, including in connection with substitution and other transactions by Affiliates of the Adviser. These inflows and outflows could negatively affect a Portfolio's net asset value, performance, and ability to meet shareholder redemption requests and could cause a Portfolio to purchase or sell securities at a time when it would not normally do so. In addition, large-scale outflows could result in a Portfolio's current expenses being allocated over a smaller asset base, which, depending on any applicable expense caps, could lead to an increase in the Portfolio's expense ratio. The Adviser or its Affiliates could be subject to potential conflicts of interest in selecting shares of Portfolios for redemption and in deciding whether and when to redeem such shares.

The Portfolios may be used as variable insurance trusts for unaffiliated insurance companies' insurance products. These unaffiliated insurance companies have financial arrangements (which may include revenue sharing arrangements) or other business relationships with the Adviser's insurance company Affiliates. These financial arrangements or other business relationships could create an incentive for the Adviser, in its selection process, to favor Sub-Advisers that are affiliated with these unaffiliated insurance companies.

Certain Conflicts Related to Sales Incentives and Relationships with Financial Intermediaries

Sales incentives and certain related conflicts arising from the Adviser's and its Affiliates' financial and other relationships with financial intermediaries are described in the sections entitled "Payments to Broker-Dealers and Other Financial Intermediaries" and "Compensation to Financial Intermediaries."

5. Shareholder information

Buying and Selling Shares

All shares are purchased and sold at their net asset value without any sales load. All redemption requests will be processed and payment with respect thereto will normally be made within seven days after tender. The Portfolios typically expect to meet redemption requests by paying out available cash or proceeds from selling portfolio holdings, which may include cash equivalent portfolio holdings. Redemption methods also may include redeeming in kind under appropriate circumstances, such as in connection with transactions involving the substitution of shares of one Portfolio (the replacement portfolio) for shares of another Portfolio (the replaced portfolio) held by insurance company separate accounts to fund Contracts. The Portfolios reserve the right to suspend or change the terms of purchasing shares.

The Trust may suspend the right of redemption for any period or postpone payment for more than seven days when the New York Stock Exchange is closed (other than a weekend or holiday) or when trading is restricted by the SEC or the SEC declares that an emergency exists. Redemptions also may be suspended and payments may be postponed for more than seven days during other periods permitted by the SEC. A Portfolio may pay the redemption price in whole or part by a distribution in kind of readily marketable securities in lieu of cash or may take up to seven days to pay a redemption request in order to raise capital, when it is detrimental for a Portfolio to make cash payments as determined in the sole discretion of EIM.

The Trust, on behalf of each Portfolio, believes that it is in the best interests of its long-term investors to discourage frequent purchases, redemptions, exchanges and transfers (referred to collectively as “frequent trading”) of Portfolio shares. If you intend to trade frequently and/or use market timing investment strategies, you should not purchase these Portfolios.

Frequent trading of Portfolio shares, including market timing and other program trading or short-term trading strategies, may be disruptive to the Portfolios. Frequent trading may adversely affect Portfolio performance and the interests of long-term investors by, among other things, requiring a Portfolio to maintain larger amounts of cash or to liquidate portfolio holdings at a disadvantageous time or price. For example, when market timing occurs, a Portfolio may have to sell its holdings to have the cash necessary to redeem the market timer’s shares. This can happen when it is not advantageous to sell any securities, so the Portfolio’s performance may be hurt. When large dollar amounts are involved, frequent trading can also make it difficult to use long-term investment strategies because a Portfolio cannot predict how much cash it will have to invest, and the Portfolio’s portfolio management team may have to allocate a significant amount of assets to cash and other short-term investments or sell investments, rather than maintaining investments selected to achieve the Portfolio’s investment objective. In addition, frequent trading of Portfolio shares may impede efficient portfolio management and impose increased transaction costs, such as brokerage costs, by requiring the portfolio manager to effect more frequent purchases and sales of portfolio securities. Similarly, a Portfolio may bear increased administrative costs as a result of the asset level and investment volatility that accompanies patterns of frequent trading.

Portfolios (or Underlying ETFs in which a Portfolio invests) that invest a significant portion of their assets in foreign securities tend to be subject to the risks associated with market timing and short-term trading strategies to a greater extent than funds that do not. Securities trading in overseas markets presents time zone arbitrage opportunities when events affecting portfolio securities values occur after the close of the overseas market but prior to the close of the U.S. market. This short-term arbitrage activity can reduce the return received by long-term investors. The Portfolios will seek to minimize these opportunities by using fair value pricing, as described in “How Shares are Priced” below.

In addition, a Portfolio that invests in securities that are, or may be, restricted, unlisted, traded infrequently, thinly traded, or relatively illiquid also may be vulnerable to market timing and short-term trading strategies. Traders using such strategies may seek to take advantage of a possible differential between the last available market prices for one or more of those relatively illiquid securities that are used to calculate the value of the Portfolio’s shares and the latest indications of market values for those securities. For example, high-yield securities may present opportunities for short-term trading strategies because the market for such securities may be less liquid than the market for higher quality securities, which could result in pricing inefficiencies. One of the objectives of the Trust’s fair value pricing procedures, as described in “How Shares are Priced” below, is to minimize the possibilities of this type of arbitrage; however, there can be no assurance that the Trust’s valuation procedures will be successful in eliminating it.

The Trust has adopted certain policies and procedures discussed below to discourage what it considers to be frequent trading. For Contractholders who have invested in shares of a Portfolio through an insurance company separate account, frequent trading includes frequent transfers between the Portfolios available through the policy or contract. The Trust and the Portfolios discourage frequent trading of Portfolio shares by Contractholders and will not make special arrangements to accommodate such trading. As a general matter, the Trust and each Portfolio reserve the right to reject any transfer request that they believe, in their sole discretion, is disruptive (or potentially disruptive) to the management of the Portfolio.

If EIM, on behalf of the Trust, determines that a Contractholder's transfer patterns are disruptive to the Trust's Portfolios, EIM or an affiliate (including the Administrator) may, among other things, restrict the availability of personal telephone requests, facsimile transmissions, automated telephone services, internet services or any electronic transfer services. The Administrator is generally responsible for monitoring, testing and maintaining compliance policies, procedures and other items for the Trust, and thus assists in monitoring the Trust's compliance with applicable requirements pursuant to the policies and procedures described below. EIM or an affiliate may also refuse to act on transfer instructions of an agent acting under a power of attorney who is acting on behalf of more than one owner. In making these determinations, EIM or an affiliate may consider the combined transfer activity of Contracts that it believes are under common ownership, control or direction.

The Trust currently considers transfers into and out of (or vice versa) the same Portfolio within a five-business day period as potentially disruptive trading activity. In order to reduce disruptive trading activity, the Trust monitors the frequency of transfers, including the size of transfers in relation to portfolio assets, in the Portfolios. The Trust aggregates inflows and outflows for each Portfolio on a daily basis. When a potentially disruptive transfer into or out of a Portfolio occurs on a day when the Portfolio's net inflows and outflows exceed an established monitoring threshold, EIM or an affiliate sends a letter to the Contractholder explaining that there is a policy against disruptive trading activity and that if such activity continues, EIM or an affiliate may take the actions described above to restrict the availability of voice, fax and automated transaction services. If such Contractholder is identified a second time as engaging in potentially disruptive trading activity, EIM or an affiliate currently will restrict the availability of voice, fax and automated transaction services. EIM or an affiliate currently will apply such action for the remaining life of each affected Contract. Because EIM or an affiliate exercises discretion in determining whether or not to take the actions discussed above, some Contractholders may be treated differently than others, resulting in the risk that some Contractholders may be able to engage in frequent transfer activity while others will bear the effect of the frequent transfer activity. Although Contractholders who have engaged in disruptive trading activity currently receive letters notifying them of EIM's or an affiliate's intention to restrict access to communication services, such letters may not continue to be provided in the future.

The policies and procedures described above also apply to retirement plan participants.

The policies and procedures described above do not apply to funds of funds managed by EIM. The Trust generally does not consider trading activity by any funds of funds managed by EIM or trading activity associated with approved asset allocation programs to be disruptive trading activity.

The Trust seeks to apply its policies and procedures to all Contractholders, including Contractholders whose accounts are held through any omnibus accounts, uniformly. It should be recognized, however, that such policies and procedures are subject to limitations:

- There is no assurance that the methods described above will prevent frequent trading or other trading that may be deemed disruptive. The Trust's procedures do not eliminate the possibility that frequent trading will occur or that Portfolio performance will be affected by such activity.
- The design of such policies and procedures involves inherently subjective judgments, which EIM and its affiliates, on behalf of the Trust, seek to make in a fair and reasonable manner consistent with the interests of all Contractholders.
- The limits on the ability to monitor potentially disruptive trading mean that some Contractholders may be treated differently than others, resulting in the risk that some Contractholders may be able to engage in frequent trading while others will bear the effect of such trading.

Consistent with seeking to discourage potentially disruptive trading, EIM, or an affiliate thereof, or the Trust also may, in its sole discretion and without further notice, change what it considers potentially disruptive trading and its monitoring procedures and thresholds, as well as change its procedures to restrict such trading. You should consult the Contract prospectus that accompanies this Prospectus for information on other specific limitations on the transfer privilege.

Notwithstanding our efforts, we may be unable to detect or deter market timing activity by certain persons, which can lead to disruption of management of, and excess costs to, a particular Portfolio.

How Shares are Priced

"Net asset value" is the price of one share of a Portfolio without a sales charge, and is calculated each business day using the following formula:

$\text{Net asset value} = \frac{\text{Total market value of securities} + \text{Cash and other assets} - \text{Liabilities}}{\text{Number of outstanding shares}}$
--

The net asset value of Portfolio shares is determined according to this schedule:

- A share's net asset value is normally determined each day the New York Stock Exchange ("Exchange") is open for trading as of 4:00 p.m. Eastern Time. In the event of an emergency or other disruption in trading on the Exchange, a share's price would still normally be determined as of 4:00 p.m. Eastern Time.
- The price for purchasing or redeeming a share will be based upon the net asset value next calculated after an order is received and accepted by a Portfolio or its designated agent.
- Because foreign securities sometimes trade on days when a Portfolio's shares are not priced, the value of a Portfolio's investment that includes such securities may change on days when shares of the Portfolio cannot be purchased or redeemed.

Generally, portfolio securities are valued as follows:

Equity securities (including securities issued by ETFs) — valued at the last quoted sale price or official closing price or, if there is no sale or official closing price, at the latest available bid price provided by a pricing service.

Debt securities — generally valued on the basis of prices provided by an approved pricing service; however, when the prices of the securities cannot be obtained from an approved pricing service, such securities are generally valued at a bid price estimated by a broker.

Convertible bonds and unlisted convertible preferred stocks — valued at prices obtained from a pricing service for such instruments or, if a pricing service price is not available, at bid prices obtained from one or more of the major dealers in such bonds or stocks. Convertible bonds may be matrix-priced based upon the conversion value to the underlying common stocks and market premiums.

Securities traded on foreign exchanges — valued at the most recent sales or bid price on the foreign exchange or market, unless a significant event or circumstance occurs after the close of that exchange or market that will materially affect its value. In that case, the security will be valued using fair value methods by the Adviser at the close of regular trading on the Exchange. Foreign currency is converted into U.S. dollar equivalent daily at current exchange rates.

Options — exchange traded options are valued at their last sales price or, if not available, at the bid price. Options not traded on an exchange or not actively traded are valued according to fair value methods.

Futures — valued at their last settlement price or, if there is no sale, at the latest available bid price.

Investment company securities — shares of open-end mutual funds (other than ETFs) held by a Portfolio will be valued at the net asset value of the shares of such funds as described in such funds' prospectuses.

Repurchase agreements and reverse repurchase agreements — valued at original cost (par) plus accrued interest. Other pricing methods such as amortized cost may be utilized depending on the features of the instrument.

Swaps — centrally cleared swaps are priced using the value determined by the central counterparty at the end of the day, which price may be provided by an approved pricing service. With respect to over-the-counter swaps and centrally cleared swaps where the central counterparty price is unavailable, a price provided by an approved pricing service will be used.

All securities held in the EQ/Money Market Portfolio are valued at amortized cost. The EQ/Money Market Portfolio seeks to maintain a constant net asset value per share of \$1.00, but there can be no assurance that it will be able to do so.

Pursuant to applicable law, the Board of Trustees of the Trust has designated the Adviser as the Portfolios' valuation designee. As the Portfolios' valuation designee, and subject to the Board's oversight, the Adviser is responsible for determining in good faith the fair value of Portfolio investments for which market quotations are not readily available or are believed by the Adviser to be unreliable. In these circumstances, a Portfolio may use a fair value estimate made according to methods the Adviser has approved in the good-faith belief that the resulting valuation will reflect the fair value of the security. For example, a security whose trading has been halted during

the trading day may be fair valued based on the available information at the time of the close of the trading market. Similarly, securities for which there is no ready market (e.g., securities of certain small capitalization issuers, high yield securities, and securities of certain issuers located in emerging markets) also may be fair valued. Some methods for valuing these securities may include: fundamental analysis (earnings multiple, etc.), matrix pricing (a method that takes into consideration the value of other securities with similar characteristics, such as ratings, yield and maturity), discounts from market prices of similar securities, or discounts applied due to the nature and duration of restrictions on the disposition of the securities. In addition, if events or circumstances affecting the values of portfolio securities occur between the closing of their principal markets and the time a Portfolio's net asset value is determined, such as with respect to foreign securities trading on foreign exchanges that may close before the time the Portfolio's net asset value is determined, the Adviser may ascertain a fair value for such securities when it deems that the event or circumstance would materially affect such Portfolio's net asset value. Such events or circumstances may be company specific, such as an earnings report, country or region specific, such as a natural disaster, or global in nature. Such events or circumstances also may include price movements in the U.S. securities markets.

The effect of fair value pricing is that securities may not be priced on the basis of quotations from the primary market in which they are traded, but rather may be priced by a fair valuation method established by the Adviser that relies on other available pricing inputs. As such, fair value pricing is based on subjective judgments and it is possible that the fair valuations reached may differ materially from the value realized on a sale and from the prices used by other registered funds to calculate their net asset values. The fair value pricing policy is intended to assure that a Portfolio's net asset value fairly reflects security values as of the time of pricing. In certain circumstances, fair value pricing of a Portfolio's portfolio securities can help to protect the Portfolio by reducing arbitrage opportunities available to short-term traders, but there is no assurance that fair value pricing will completely prevent dilution of the Portfolio's net asset value by such traders.

For an explanation of the circumstances under which the Underlying ETFs will use fair value pricing and the effects of using fair value pricing, see the Underlying ETFs' prospectuses and statements of additional information.

Dividends and Distributions

Each Portfolio (other than the EQ/Money Market Portfolio and Multimanager Core Bond Portfolio) generally distributes most or all of its net investment income and net realized gains, if any, annually. The EQ/Money Market Portfolio normally declares and distributes dividends from its net investment income daily, and distributes its net realized gains, if any, annually. The Multimanager Core Bond Portfolio normally distributes dividends from its net investment income monthly and distributes its net realized gains, if any, annually. Dividends and other distributions by a Portfolio are automatically reinvested at net asset value in shares of the distributing class of that Portfolio.

Tax Consequences

Each Portfolio is treated as a separate corporation, and intends to qualify (in the case of a Portfolio that has not completed a taxable year) or continue to qualify each taxable year to be treated as a regulated investment company ("RIC"), for federal income tax purposes. A Portfolio will be so treated if it meets specified federal income tax requirements, including requirements regarding types of investments, diversification limits on investments, types of income, and distributions. To comply with all these requirements may, from time to time, necessitate a Portfolio's disposition of one or more investments when it might not otherwise do so. A RIC that satisfies the federal tax requirements is not taxed at the entity (Portfolio) level to the extent it passes through its net income and net realized gains to its shareholders by making distributions. Although the Trust intends that each Portfolio will be operated to have no federal tax liability, if any Portfolio does have any federal tax liability, that would hurt its investment performance. Also, to the extent that a Portfolio invests in foreign securities or holds foreign currencies, it could be subject to foreign taxes that would reduce its investment performance.

It is important for each Portfolio to achieve (in the case of a Portfolio that has not completed a taxable year) or maintain its RIC status (and to satisfy certain other requirements), because Portfolio shareholders that are insurance company separate accounts will then be able to use a "look-through" rule in determining whether those accounts meet the investment diversification rules applicable to them (which differ from those that apply to RICs). If a Portfolio failed to meet those diversification rules, owners of non-pension plan Contracts indirectly funded through that Portfolio would be taxed immediately on the accumulated investment earnings under their Contracts and would lose any benefit of tax deferral. Therefore, the Trust's Adviser and Administrator carefully monitor each Portfolio's compliance with all of the RIC requirements and separate account investment diversification rules.

Contractholders seeking to more fully understand the tax consequences of their investment should consult with their tax advisers or the insurance company that issued their Contract or refer to their Contract prospectus.

6. Distribution arrangements

The Portfolios are distributed by Equitable Distributors, LLC (the “Distributor”), an affiliate of EIM. The Distributor is registered as a broker-dealer under the Securities Exchange Act of 1934, as amended, and is a member of the Financial Industry Regulatory Authority (“FINRA”).

The Trust has adopted a Distribution Plan pursuant to Rule 12b-1 under the 1940 Act for the Trust’s Class IA and Class IB shares. Under the Distribution Plan, Class IA and Class IB shares are charged a distribution and/or service (12b-1) fee to compensate the Distributor for promoting, selling and servicing shares of the Portfolios. The distribution and/or service (12b-1) fee may be retained by the Distributor or used to pay financial intermediaries for similar services. The maximum distribution and/or service (12b-1) fee for a Portfolio’s Class IA and Class IB shares, as applicable, is equal to an annual rate of 0.25% of the average daily net assets of the Portfolio attributable to Class IA and Class IB shares. Because these fees are paid out of a Portfolio’s assets on an ongoing basis, over time, these fees for Class IA and Class IB shares will increase the cost of your investment and may cost you more than paying other types of charges.

The Distributor also may receive payments from certain Sub-Advisers of the Portfolios or their affiliates to help defray expenses for sales meetings, seminar sponsorships and similar expenses that may relate to the Contracts and/or their respective Portfolios. These sales meetings or seminar sponsorships may provide the Sub-Advisers with increased access to persons involved in the distribution of the Contracts. The Distributor also may receive other marketing support from the Sub-Advisers in connection with the distribution of the Contracts. These payments may provide an incentive to the Adviser in selecting one Sub-Adviser over another or a disincentive for the Adviser to recommend the termination of such Sub-Advisers.

Compensation to Financial Intermediaries

In addition to the distribution and service fees paid by the Portfolios, the Distributor or the Adviser (or one of their affiliates) may make payments out of its own resources to provide additional compensation to selected affiliated and unaffiliated sponsoring insurance companies (or their affiliates) or other financial intermediaries (collectively, “financial intermediaries”). These payments may create an incentive for a financial intermediary or its representatives to recommend or offer shares of the Portfolios or insurance products for which a Portfolio serves as an underlying investment. Such payments, which are sometimes referred to as “revenue sharing,” may be calculated by reference to the gross or net sales by such person, the average net assets of shares held by the customers of such person, the number of accounts of the Portfolios attributable to such person, on the basis of a flat fee or a negotiated lump sum payment for services provided, or otherwise.

The additional payments to such financial intermediaries are negotiated based on a number of factors including, but not limited to, quality of service, reputation in the industry, ability to attract and retain assets, target markets, customer relationships, and relationship with the Distributor or its affiliates. No one factor is determinative of the type or amount of additional compensation to be provided. The amount of these payments, as determined from time to time by the Distributor or the Adviser (or an affiliate) in its sole discretion, may be different for different financial intermediaries. The compensation arrangements described in this section are not mutually exclusive, and a single financial intermediary may receive multiple types of compensation. These additional payments are made by the Adviser, the Distributor or their respective affiliates and do not increase the amount paid by you or the Portfolios as shown under the heading “Fees and Expenses of the Portfolio” in the Portfolio summaries in this Prospectus.

Payments by the Distributor and/or the Adviser (and their affiliates) to financial intermediaries may include payments for providing recordkeeping services with respect to certain groups of investors in the Portfolios, including Contract owners that allocate contract value indirectly to one or more Portfolios (collectively referred to as “subaccounting” services, and Contract owners and other investors as “investors”). The subaccounting services typically include: (i) maintenance of master accounts with the Portfolios (e.g., recordkeeping for insurance company separate accounts investing in the Portfolios); (ii) tracking, recording and transmitting net purchase and redemption orders for Portfolio shares; (iii) establishing and maintaining investor accounts and records; (iv) recording investor account balances and changes thereto; (v) distributing redemption proceeds and transmitting net purchase payments and arranging for the wiring of funds; (vi) reconciling purchase and redemption activity and dividend and distribution payments between a master account and the Portfolios; (vii) maintaining and preserving records related to the purchase, redemption and other account activity of investors; (viii) providing statements to investors; (ix) furnishing proxy materials, periodic fund reports, prospectuses and other communications to investors as required; (x) assisting with proxy solicitations on behalf of the Portfolios, including soliciting and compiling voting instructions from Contract owners; (xi) responding to inquiries from investors about the Portfolios and (xii) providing information in order to assist the Portfolios in their compliance with state securities laws.

Such payments also may be made to provide additional compensation to financial intermediaries for various marketing support services, including, without limitation, providing periodic and ongoing education and training and support of financial intermediary personnel regarding the Portfolios and the financial planning needs of investors who purchase through financial intermediaries; adding the Portfolios to the list of underlying investment options in an insurance company's variable products; disseminating to financial intermediary personnel information and product marketing materials regarding the Portfolios; explaining to financial intermediaries' clients the features and characteristics of the Portfolios; conducting due diligence regarding the Portfolios; granting access (in some cases on a preferential basis over other competitors) to sales meetings, sales representatives and management representatives of the financial intermediary; and providing business planning assistance, marketing support, advertising and other services. The Distributor and its affiliates may make other payments or allow other promotional incentives to financial intermediaries to the extent permitted by SEC and FINRA rules and by other applicable laws and regulations.

The Distributor and its affiliates may make the payments described above in order to promote the sale of Portfolio shares and the retention of those investments by clients of insurance companies and other qualified investors. To the extent these financial intermediaries sell more shares of the Portfolios or retain shares of the Portfolios in their customers' accounts, the Adviser, the Distributor and their affiliates may directly or indirectly benefit from the incremental management and other fees paid to the Adviser and the Distributor by the Portfolios with respect to those assets.

The Portfolios' portfolio transactions are not used as a form of sales-related compensation to financial intermediaries that promote or sell shares of the Portfolios and the promotion or sale of such shares is not considered as a factor in the selection of broker-dealers to execute the Portfolios' portfolio transactions. The Adviser places, and each Sub-Adviser is required to place, each Portfolio's portfolio transactions with broker-dealer firms based on the firm's ability to provide the best net results from the transaction to the Portfolio. To the extent that the Adviser or a Sub-Adviser determines that a financial intermediary can provide a Portfolio with the best net results, the Adviser or the Sub-Adviser may place the Portfolio's portfolio transactions with the financial intermediary even though it sells or has sold shares of the Portfolio.

You can find further information in the SAI about the payments made by the Distributor, the Adviser, or their affiliates and the services provided by your financial intermediary. You can also ask your financial intermediary about any payments it receives from the Distributor, the Adviser, or their affiliates (and any conflicts of interest that such payments may create) and any services your financial intermediary provides, as well as about fees and/or commissions it charges. Your financial intermediary may charge you fees or commissions in addition to those disclosed in this Prospectus. Financial intermediaries may categorize and disclose these arrangements to their clients and to members of the public in a manner different from the disclosures in this Prospectus and the SAI.

7. Financial highlights

The financial highlights table is intended to help you understand the financial performance for each Portfolio's Class IA, Class IB and Class K shares, as applicable, for the fiscal periods indicated. The financial information in the table below is for the past five (5) years (or, if shorter, the period of the Portfolio's operations).

Except for the EQ/Core Plus Bond Portfolio, the financial information below for the Class IA, Class IB and Class K shares, as applicable, of each Portfolio has been derived from each Portfolio's financial statements, which have been audited by PricewaterhouseCoopers LLP, an independent registered public accounting firm. PricewaterhouseCoopers LLP's report on each Portfolio's financial statements as of December 31, 2023, and the financial statements themselves appear in the Trust's Annual Report.

For the EQ/Core Plus Bond Portfolio, the financial information below for the Class IA, Class IB and Class K shares of the Portfolio has been derived from the Portfolio's and the Portfolio's predecessor's financial statements audited by PricewaterhouseCoopers LLP. PricewaterhouseCoopers LLP's report on the Portfolio's financial statements as of December 31, 2023, and the financial statements themselves appear in the Trust's Annual Report. The Portfolio's predecessor was an identically named portfolio that was organized as a series of EQ Premier VIP Trust and that had a substantially identical investment objective, policies and strategies as the Portfolio. The Portfolio's predecessor portfolio merged into the Portfolio in a shell reorganization on November 12, 2023, and the Portfolio succeeded to the accounting and performance histories of its predecessor portfolio. The historical information for periods prior to November 13, 2023, presented below for the Class IA, Class IB and Class K shares of the Portfolio corresponds to the historical information for the Class A, Class B and Class K shares of its predecessor portfolio.

Certain information reflects financial results for a single Portfolio share. The total returns in the tables represent the rate that a shareholder would have earned (or lost) on an investment in a Portfolio (assuming reinvestment of all dividends and other distributions). The total return figures shown below do not reflect any separate account or Contract fees and charges. The total return figures would be lower if they did reflect such fees and charges. The information should be read in conjunction with the financial statements contained in the Trust's Annual Report which are incorporated by reference into the SAI and available upon request.

Class K	Year Ended December 31,				
	2023	2022	2021	2020	2019
Net asset value, beginning of year	\$ 49.77	\$ 84.66	\$ 84.45	\$ 66.50	\$54.71
Income (loss) from investment operations:					
Net investment income (loss) ^(e)	0.38	0.07 [†]	(0.09)	0.12 [†]	0.66
Net realized and unrealized gain (loss)	18.81	(26.66)	17.42	25.60	17.60
Total from investment operations	19.19	(26.59)	17.33	25.72	18.26
Less distributions:					
Dividends from net investment income	(0.38)	—	—	—	(0.68)
Distributions from net realized gains	(1.38)	(8.30)	(17.12)	(7.77)	(5.79)
Total dividends and distributions	(1.76)	(8.30)	(17.12)	(7.77)	(6.47)
Net asset value, end of year	\$ 67.20	\$ 49.77	\$ 84.66	\$ 84.45	\$66.50
Total return	38.63%	(31.98)%	20.79%	39.18%	33.68% ^(cc)
Ratios/Supplemental Data:					
Net assets, end of year (000's)	\$11,778	\$ 9,247	\$13,336	\$11,232	\$8,537
Ratio of expenses to average net assets ^(f)	0.73%	0.72%	0.70%	0.72%	0.73%
Ratio of net investment income (loss) to average net assets ^(f)	0.63%	0.10%	(0.10)%	0.16%	1.02%
Portfolio turnover rate [^]	81%	83% ^(h)	74%	60%	56%

[^] Portfolio turnover rate excludes derivatives, if any.

[†] The amount shown for a share outstanding throughout the period does not accord with the aggregate net income and/or gain on investments for that period because of the timing of sales and repurchases of the Portfolio shares in relation to fluctuating market value of the investments in the Portfolio.

^(e) Net investment income (loss) per share is based on average shares outstanding.

^(f) Expenses do not include the expenses of the underlying funds ("indirect expenses"), if applicable.

^(h) The portfolio turnover rate calculation includes purchases and sales made as a result of the replacement of the sub-adviser.

^(cc) Includes income resulting from a litigation payment. Without this income, the total return would have been 33.27% for Class IA, 33.27% for Class IB and 33.60% for Class K.

Annual and Semi-Annual Reports — Additional information about the Portfolios' investments is available in the Portfolios' annual and semi-annual reports to shareholders. In a Portfolio's annual report, you will find a discussion of the market conditions and investment strategies that significantly affected the Portfolio's performance during the last fiscal year.

Form N-CSR — Additional information about the Portfolios' investments is available in Form N-CSR. In Form N-CSR, you will find the Portfolios' annual and semi-annual financial statements.

Statement of Additional Information (SAI) — The SAI includes additional information about the Portfolios, has been filed with the SEC, and is incorporated into this Prospectus by reference, which means that it is legally considered to be part of this Prospectus.

Portfolio Holdings Disclosure — A description of the Portfolios' policies and procedures with respect to the disclosure of their portfolio securities holdings is available in the Portfolios' SAI, which is available on the Trust's website.

To request a free copy of the Portfolios' SAI, annual or semi-annual reports to shareholders, or financial statements, request other information about the Portfolios, or make shareholder inquiries, contact your financial professional, or call the Trust, toll-free, at 1-877-222-2144. You can also access and download the Portfolios' SAI, annual and semi-annual reports to shareholders, and other information such as the Portfolios' financial statements (as well as a copy of this Prospectus) at the Trust's website: <https://equitable-funds.com>, free of charge.

Your financial professional or the Trust will also be happy to answer your questions or to provide any additional information that you may require.

Reports and other information about the Portfolios are available on the EDGAR database on the SEC's website at:

<http://www.sec.gov>

Copies of this information may be obtained, after paying a duplicating fee, by electronic request at the following email address: publicinfo@sec.gov

Each business day, the Portfolios' net asset values are transmitted electronically to insurance companies that use the Portfolios as underlying investment options for Contracts.
